
http://www.planetemily.com/ao7/userStats.php

"CQ" = 31 QSOs !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
"SELF" = 14 QSOs !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Hmmm ! So.... according to the log, "CQ" and "SELF" are...
2 "new" prefixes, "New DXCC entities" !!!!!!!

Well Gentlemen, to be serious I believe that:

in order to be able to keep this LOG "clear & correct", we must inform those peoples which entered wrong entries by sending personal Emails.

As pointed out before from someone here, obviously they did not read our posts on Eu-AmsAt & Amsat-BB . So probably they are not informed about the problem with "CQ" entries.

Otherwise, if they know this problem and they continue to write wrong entries,

sorry but - in this case definitely they are idiots. And the idiots, always in the

human history was a major problem. Still unsolved ! Don't spend your time.

Have a nice Sunday

73, Mak SV1BSX

Hi Ed,
Good idea !! ... yes it could ... but the problem is getting hold of Emily (N1DID, ex: W0EEC) who wrote the program ... I respect the copyright laws and can't change anything without her permission.

Have a good day Ed.

Congrat's also to DM9LSB for 1000 points on AO-7's Online LOG.
He is the 6th European station (and 12th WW) which reaching this score.

http://www.planetemily.com/ao7/userStats.php

According to statistics, the total score for the first 12 users (above to 1000)
is 25155 points !!! By abstracting 20 % (statistic-error, wrong entries, blank entries etc.)
definitely we can talking in practice for about 20.000 real QSOs ! Just from 12 users !!!

What a great Sat ! The "Grand Old Lady" (aka... AO-7) is still... very beautiful !

Hi John & Group,

well, MEO is a very interesting kind of Satellites, as the Middle Earth Orbit seems to be very-very
attractive for our OSCARs. Looking on a Satellite-tracking program, the footprint of a MEO definitely
opens the... "belly" ! It's delicious !

BTW I am not a ...Space-Engineer, I have no idea about the possible difficulties of MEO-Sats and may be
it's a silly-idea that, but:

is it possible to place a LEO Sat on a higher orbit by using a small booster-engine, ie a small ARCJet?
Just I wondering....

As I know, the main reason for the Low "Height" above Earth-surface for the most LEOs (like VO-52, AO-51) it's
the limited Power-boosting of rockets that places in orbit the LEO-Sats. Higher altitube needs much more powerfull
rocket and thus is very difficult a higher orbit. However, could it be possible to place a Satellite higher by using
a small enclosed booster-engine onto the Spacecraft? I mean that, the Satellite reaching with the usual rocket the
height of 600-700 Km and then, the Satellite achieves a higher Earth-orbit by using the self-power ARCJet engine.
Even if does not reach the height of a MEO - but much lower (i.e. 2000 Km), it's still a LEO but with
a great footprint. Just I wonder...

Another point is the eccentricity - having in my mind the FO-20, where the perigee is 910 and the apogee 1750 Km.
Therefore, the Satellite's orbit has much more "suspense" as sometimes the "Mutual window" is much more bigger
"across the pond" during the apogee and the footprint reaching unusual areas, with great possibilities for unexpected
DX-QSOs (John, I always remember your GREAT QSO with Japan via FO-20 !)
It should be more attractive a similar orbit for the LEOs, in contrast with "perfect" eccentricity where the Satellite's
footprint is always the same.

"Just my 2 cents" but, I would like to see a future LEO or MEO OSCAR, according to above mentioned.

73, Mak SV1BSX

PS: Yes I know, it's Easter..... for similar wishes the perfect season is during the .. Xmas and the qualified
person is named... Santa Claus !

Hello John,

well, the page is very-very interesting (I am sad because ... I missed the patent - Hi !!!i).

Of course your friends are well known on Ham Satellite community. The page is very informative, for example
I forgot that the "path-loss" is bigger on a MEO due to higher altitude, so the satellite needs some improving
on Output power and higher antenna-Gain. That means a bigger Power-budget, which is always a difficult case in Space.

However, except this page (unknown to me till yesterday - Tks for QSP) I have not seen any other referral about
the possibility to launch a MEO Sat by Radio Amateurs. Why that?

It is just a "New idea"? or other problems prevent to have in orbit a similar Satellite?

I wonder...

1357. Re: MEO Sats

Yahoo group: eu-amsat
Date: 2008-03-24 18:39:50 UTC
From: John Hackett
Topic: 1356 Message: 1357

Hello Mak,
Your inquisitiveness about satellites is *EXACTLY* what we need ... people who have a genuine interest ... well done ! Mak.

You mark my words, EU-Amsat has become a well respected group.

To answer your query, there are two main reasons why an MEO hasn't materialised yet ...

1) Normally, commercial rockets don't go there.

2) Nobody in the amateur community has taken the trouble to actually organise something like this ...

Well ... that's not quite true ... GM1SXX and myself have been talking about this since William PE1RAH first presented us with his ideas for a transponder ... and as everyone now knows ... one of William's designs became Hamsat VO-52.

I have previously 'hinted' that I'm in contact with certain elements in Russia. What you are thinking about is 'precisely' what I've been 'messing' with these last months but it's an uphill battle Mak, most people have jobs and families that should and do take priority.

What Al and I propose is a batteryless analogue transponder, a beacon but no 'computer' (as we know it).

Before one dismisses a batteryless satellite I would remind them to look at the last 12 months of AO-7 operations. Such a design would reduce costs dramatically.

The actual 'building' of such a satellite presents no problem at all but getting it to where we want it to go takes a *LOT* of planning.

Don't worry !!! ... (he he) ... as soon as I have something concrete on paper ... the call will go out for Dollars, Pounds, Euros, Kroner, Marks, Pesetas, Zloti, Rubles, chewing gum wrappers and anything else that can be traded for hard cash.

You'll note that my activities have been intentionally limited to a single QSO per day for the last few months on AO-7 ... the rest of the time has been spent on "planning".

the
height of 600-700 Km and then, the Satellite
achieves a higher Earth-orbit by using the self-power ARCJet engine.

Even if does not reach the height of a MEO - but much lower (
i.e. 2000 Km), it's still a LEO but with
a great footprint. Just
I wonder...

Another point is the eccentricity - having in my
mind the FO-20, where the perigee is 910 and the apogee 1750
Km.
Therefore, the Satellite's orbit has much more
"suspense" as sometimes the "Mutual window" is much
more bigger

"across the pond" during the apogee and the footprint reaching unusual areas,
with great possibilities for unexpected

DX-QSOs (John, I always remember your GREAT QSO with
Japan via FO-20 !)
It should be more attractive a similar orbit for the
LEOs, in contrast with "perfect" eccentricity where the
Satellite's
footprint is always the same.

"Just my 2 cents" but, I would like to see a future
LEO or MEO OSCAR, according to above mentioned.

73, Mak SV1BSX

PS: Yes I know, it's Easter..... for
similar wishes the perfect season is during the .. Xmas and the
qualified
person is named... Santa Claus
!

Mak puts it into perspective.

When one thinks about
it ... surely on a par with the veritable old RS-10 regarding activity and
enjoyment. All we need now is a MEO/HEO bird and we're all ready to rock
n' roll.

1358. What can one do ??.

Yahoo group: eu-amsat
Date: 2008-03-31 08:56:39 UTC
From: John Hackett
Topic: 1358 Message: 1358

This morning, AO-9 was FM'ing like nobody's business. A quick sweep of the passband located a station calling CQ with just "slightly" too much power ... (he means: *WAY !! TOO MUCH*, folks).

I and another station called him, probably with the same intent, to politely request that he QRP by about 3 million dB ... (and try connecting a RECEIVE antenna).

As is usually the case , this "gentleman" probably couldn't hear himself too well and consequently "upped" the power to compensate ... so that myself and the other station couldn't communicate either.

I thought ... probably a newcomer and despite the published operating proceedure probably doesn't know any better. He probably doesn't even know !!! the excess power is the root cause of the problem.

Therefore ... I sent a polite e-mail to his QRZ.COM address explaining why cranking up the power would have the OPPOSITE of the desired effect and why one shouod primarily concentrate onthe RECEIVE side on all satellites but in PARTICULAR AO-7.

I asked him to read the operating instructions and history contained on the AO-7 Resource Page.

For my trouble I received an immediate reply telling me in no uncertain terms what an impolite and *BAD* amateur I am... and that I *DO NOT* !!!! own the satellites.

Oh well, now I know !!.

NB.

My e-mail was not !!!! crass, on the contrary, it was very polite and I took the trouble to try to explain "WHY".

In such circumstnces, what can one do ??.

"Hanging out" the Amateur concerned (by callsign) would only start a range war ... beef v sheep.

John Wayne !! wouldn't have stood for it.

Our National TV just aired "the Sputnik years" (Les années Sputnik) where the two Italian brothers Achille & Gian Battista Judica-
Cordiglia. where probably the first "Hearsat" folks in the world.

I try to google for their call sign but nothing seems to match their names. They where using a kind of flat reflector antenna (see the link
below) and i don't know how effective this curious design can be?

One comment from one of the two brothers hit me. The magic in our adventures was the radio...take the radio out and the magic will
disappear they concluded this after the TV broadcast of the first moon landing who was viewed world-wide.

John,

3-4 years ago I had a chat with Aldert about P3Express and I said to him:

"... don't expect the new HEO sooner than 2008" (did you remember that Aldert?)

It was just my speculation, but unfortunately I have been confirmed. Of course it wasn't a random speculation.
I remember that just the same happened with AO-40 (and other OSCAR-projects). Several adjournments before
the "lift-off". And finally the shipwreck of spacecraft.

I don't know, and I hope to be wrong but I am not optimistic anylonger with HEOs. It is sad but it's obvious that,
any new OSCAR is definitely a very difficult matter. And I hope again to be wrong, but I don't think that the P3Express will be
in orbit soon. To be honest, I believe for the current year is just a nice... dream !

Firstly, the money-budget is not enough in order to complete the project. Second, the problem with rocket-carrier seems
to be unsolved. Ariane-Space has involved with big-deals about Commercial Satellites and, probably it is not any longer
a "supporter" for our P3 OSCAR-Satellites. In addition the process of "P3E project" seems to be significant delayed. This Satellite named "Express" in order to be in Earth orbit ASAP after the AO-40's damage (Jan 2004). They was talking for 2006 and as you pointed out (correctly !!!) now is 2008. But this is not the worst case my friend John. The most unsettling thing is that, they do not talking for anything ! Just a deadly silence.

Practically, we have not idea about the process of Satellite. Any new updating-bulletin is published every.. 1-1.5 years.
As you can easily understand, with this "tempo" the Satellite it's impossible to be in orbit before the year... 2012 - 2015 !

Another matter that make me very thoughtful is the last "announcement" of AMSAT-DL about the AO-40's new recovery-effort.
It's strange for me that which happens during this period. Why now? the last 4 years I did not see any serious effort about AO-40. Now it is strange for me and I am fully surprised with this event. This period should be the final-countdown for preparations about P3E, so the ASMAT-DL should be very "busy". How is possible to have "free-time" for the "dead-bird"?
It's more than Welcome - of course, but on the other hand that sounds to me very-very strange, indeed !

A bad-scenario could be that: they know that the P3E is not a realizable case for the near future...
so, are they hope to do the AO-40 workable again ..? ? !? Hmmm.... ! I believe that it is easier to win in

the... LOTTO !

Sorry guys if I am a bit pessimist tonight. But sometimes the "straightforward way" is better than an illusion.

And even if I am a bit "hard", I am looking forward for the P3E.... it is also for me a part on my Ham-dreams.

But as John pointed-out, I also believe that it's a long-long time to wait from 2004 till now - and who knows
how long - for the new HEO P3E... which in practice it's just an improving model of AO-13. Nothing "extreme",
nothing brand-NEW, in order to be patient for several years... it's just a replication of previous AO-13 with better
electronics.

"Just my 2 cents...."

Have a nice weekend

73 de Mak, SV1BSX

Hello Mak and Group

The last anouncement about a launch was made from Peter Guelzow, DB2OS,
in our DL-Journal Q3 2007. Since then its a curious silence around P3E.

Apropos Lotto: We need a winner with a few million Euros ;-)

Is too much asking to have "at the minimum" 2 lines on the AMATEUR SATELLITE BB to keep the crowd inform? No need to have 2 pages only 2
lines with the progress!

What it is hurting most the amateur satellite community is the lack on information! If we are proud to be COMMUNICATORS lets demonstrate it
at least here on the internet.

My 2 canadian cents

Hello folks,

Congrats to Aldert also from me. In my opinion, it is just "a number on some chart" that every active AO-7 user can reach by just operating via the bird. Instead of some numbers, I prefer the friendships that I have achieved by operating this old but still very well functional "old lady"!

1375. AMSAT-DL received Euros from France

Yahoo group: eu-amsat
Date: 2008-04-05 22:35:58 UTC
From: Thomas Frey
Topic: 1375 Message: 1375

Hello All

This are brand new news. AMSAT-DL received 8'000 Euro from AMSAT-F
and 1'500 Euro from REF for the P3E and P5A projects. Read the story from
Peter, DB2OS, (in German) at
http://www.amsat-dl.org//index.php?option=com_content&task=view&id=157&Itemid=151

Hopefully this will bring us a step closer to an orbiting P3E.

Mit freundlichen Gr?ssen, Regards, 73

From: John Hackett
Topic: 1376 Message: 1376

To GMT or not to GMT, that is the question...

(With apologies to William Shakespeare).

DH5MK seems to have worked a bunch of European stations on orbit 52808 at 09:10 ...

At that time, the satellite was in fact over Fiji in the South Pacific ... err ... we use GMT times on satellites mein Herr.

He also logged another European station at 09:55 ... (on the same orbit) ... which is pretty clever by anybody's !! standards.

What was all the waffle about statistics? ... and filling in the log correctly ?.

I see we still have the 'CQ''ers ... now augmented by 'CW QSO'

Hello John,

today morning I was looking on a HardDisk of a friend of mine, and VOILA !

I found an old copy of QST (Jan' 75) where the OSCAR NEWS
reports about ..... the "New Satellite" AO-7 ! ! ! !

Very-very interesting comments about the sensitivity of Mode-A & Mode-B !
Seems to be unchanged nowadays, even without batteries.

73, Mak SV1BSX

ps: FWD also to EU-Amsat

Hi Mak,
A couple of interesting points ...

Pat Gowan (G3IOR) is the amateur who first made us aware of the resurrection on AO-7.

The Oscar News report is where Amsat-UK got it's magazine name.

I have the original 1974 Amsat newsletter and as I mentioned once before, after conferring with Jan King, and daily monitoring of AO-7, I discovered that some of the published information about the satellite in the 1974 newsletter was *NOT* correct ... in particular, the timer and clock system ... confirmed by Jan.

I have a lot of correspondance from Jan and since he was the project leader for AO-7, partly built in his garage (!) what he doesn't know about AO-7 could be written on the back of a gnat's notepad.

As you can imagine ... I maintain a private database of AO-7 material. Maybe one day I'll get around to uploading all these files to EU-Amsat.

I was rather amused at Amsat-UK's "crowing" about AO-16 (the latest Oscar News) and it's 18 years in space ... AO-7 will soon pass
34 years ... almost *TWICE* !!! as long.

....ok John.

I mentioned the comment which points out that, the Mode-A needs much more Power on Uplink vis-a-vis to Mode-B. (.. that is just the same nowadays).

The second *interesting* point was that:
"there is some problem with high power stations overloading the translator".

So, from this ...historical document it's obvious for me that: The "Alligators" always existed !
They are "all weather, all times, anywhere"... !

I have to laugh...

73, Mak

Topic: 1387 Message: 1387

Hi Mak,
You're absolutely right about the difference in the transponders on AO-7 ... also that nothing has changed regarding the alligators.

The mode-B transponder was *ALWAYS* recommended as a maximim of 100w ERP but a lot of people (predominently Americans) use 50 watt transceivers with gain antennas.

I distinctly remember one gentleman "advising" a miniumum of an 80w BRICK with a yago for mode-B.

Almost "nobody" reduces power as the satellite approaches. There "is" a difference in the required power when the satellite is 3000 km distant vis-a-vis 900 km.

Another thing that never changes is every saturday morning the European deliberate QRM dit'ers come creeping out of the woodwork.

I have never understood "why" these clown use their equipment to attempt to didturb people instead of actually having a QSO.

The paradox last Saturday was that the more some clown was putting a series of dits on my QSO's - the more stations called me - so rather thast disturbing - he was in fact attracting stations so I didnt have to call CQ, I just sat there and answered.

It's fairly easy to see which country the "gentleman" is from- by watching the footprint over time (many passes). It's an experienced operator so the behaviour is rather strange.

With satellite operating, it's from the neck up !! that counts but our deliberate QRM gentleman (?) obviously operates from the socks down !!.

> complémentaire à nos demandes précédentes.
>
> The full report (unfortunately not in English) can be read at
> http://ag.ref-union.org/2008/rapport_moral_2008.pdf

Hi Trevor
The reports just repeat what you wrote above regarding the 3.4ghz band

File 3,4 GHz:
The administration agrees to launch a new study which relates to a width reduced to 200 or 300 Khz at the beginning of the band and
requires of us to send a complementary file to our preceding requests.

Now just check this site. Not only the air is polluted but the space too! That's explain why AMSAT-NA is waiting to launch the next HEO
and why they prefer short life disposable cubes or commercial ride. They are now turning green! as Mr Bob McGwier told me recently.
Could be they will just have to rent a commercial satellite up/down channel and called it the E channel!

Excerpt

The members give us essentially zero dollars to support the building and
launching of satellites through their dues. What they barely cover (if
they do cover it) is their membership costs.

We desire a large system that will eventually encompass the
globe for geostationary. In addition, we are supporting Phase 3E with
MORE DOLLARS THAN WE ARE GETTING FROM INTERNATIONAL DONORS.

Bob

End of the excerpt!

Could be the international donors also contribute to P3E directly? As the world does not end at the American border! and as the world is
not flat, they don't have to fear to jump in the void at the other end of the ocean... but as 10% of the Americans believe Elvis is alive
anything is possible...

Hi John,

yes indeed, today morning it was a nice QSO with clear-crystal-CW audio from GOL (Grand Old Lady) .

I also enjoyed that, even if I was afraid the rapidly LOS of your signal, when the GOL approached very close

to my local mount (M.Parnis - 1450 m. ASL)

FB!,
Excellent! signal from you this morning Mak, Greece to Norway is certainly no record but it's better than a kick in the backside!.

Considering we're both plagued by mountains, we did good.

Well done Mak.

73 John. <la2qaa@...>

From: SV1BSX
Topic: 1395 Message: 1395

Hello,

has anybody from this Group any experience with ICOM IC-475 ? (UHF All Mode).

A fried of mine is interested to buy this one for Satellite-use but
I can't find any accurate Review (or comment) about this RIG on Internet.

If someone has experience, any comment is HIGHLY Appreciated !
(Especially I would like to know the "BAD"-points of it).

1396. AO-7's Eclipse period: is BACK agn

Yahoo group: eu-amsat
Date: 2008-04-23 05:42:27 UTC
From: SV1BSX
Topic: 1396 Message: 1396

Hello

today morning (03:17 - 03:20 Z) the AO-7 returned to eclipse-period.
Therefore, the 24 Hours Timer has lost the "Counting" and the "Grand Old Lady"
is active again in Mode-B --***and NOT in Mode-A***, as today normally expected .

Just keep in mind that. AO-7 Online LOG is now very helpful tool
for anybody which looking for the currect Mode.

So, don't forget: KEEP the Log "CORRECT & CLEAR".

1397. AO-7's Eclipse period: CORRECTION !

Yahoo group: eu-amsat
Date: 2008-04-23 07:25:43 UTC
From: SV1BSX
Topic: 1397 Message: 1397

Hello again,

I surpised a few minutes before, as the AO-7 was active in Mode-A (orbit #53010), and NOT in Mode-B as
I observed in the previous orbit #53009.

So, as I noticed just now in NOVA, the Eclipse period has began yesterday (22 April ' 08), NO today !
It is interesting that, from now the AO-7 comes through a small eclipse period several times in the same day,
thus it's possible to have "Swithing" between Mode-A & Mode-B quite often .

73, Mak SV1BSX

Hi Igor,

I hope .... to be not the cause you have lost the pass !!!

Just now 08:05Z (orbit #53011 according to NOVA) the "Grand Old Lady" is
QRV on
Mode-A once more time, even if passed through a small eclipse between
07:06 - 07:10Z.

1401. Delfi C3 launch succes

Yahoo group: eu-amsat
Date: 2008-04-28 04:25:48 UTC
From: Luc Leblanc
Topic: 1401 Message: 1401

I am watching the PLSV-C9 launch from India and at 0408Z PSLV-C9 was at 2932 km downrange at an altitude of 626KM and the launch was
perfect at 0353Z. The tentative Delfi C3 KEPS "seems" to be ahead of the actual PSLV-C9 position. We will not be able here on the eastern
North American side to get the sat before 1329Z (0929 EST)

RASCALS is working tracking is ready i just wait for the real KEPS and the first report from the western coast of NA.

Congratulations for the launch team in India and it's could be a world premiere a 10 satellites launch on a single rocket.

P.S. Europe will have couple of pass jin the morning just send your report on the BB

Thank's

Here is the last summary

I track in the middle of the pack "Object C" but on the last noon pass i heard 3 additional carrier on 145.93 without any modulation? i
don't know where they are coming from. It is near a full time job to be able to listen for about 10 sats so closed in orbit...

Yahoo group: eu-amsat
Date: 2008-04-28 20:42:45 UTC
From: SW1JGW
Topic: 1404 Message: 1415

Today i have decoded the telemetry. Only some packets of course!!
I used an audigy Sound card (I use the same for DRM and SD Radio
with good resaults) Unfortunatelly i sent the telemetry data as
guest user. From tomorrow i will register with my callsign!!
I think that we must use autodoppler to have the best value on
signal to noise because its nessesary for synchronization!!!
I think that my drm activity help me to decode.

1416. Delfi-C3 Heard @ 19:37Z on KM17UW

Yahoo group: eu-amsat
Date: 2008-04-28 23:08:54 UTC
From: SV1BSX
Topic: 1416 Message: 1416

Hi all,

I heard also the Delfi-C3 strong enough at 19:37 Z. The pass was very good for my QTH, almost overhead.
However, is unable to decode the recorded audio-file by using the Rascal program.
I have put a small part of my recorded file here:

http://groups.yahoo.com/group/eu-amsat/files/Defli-c3/

I wonder why is not possible to decode it. Seems to be clear enough.

Luc, have you any recorded audio from your reception? I would like to test
your file on my PC.

Finally, many thanks to Delfi-Team for the new Satellite !

1418. Re: Delfi_C3 life

Yahoo group: eu-amsat
Date: 2008-04-29 08:30:28 UTC
From: Luc Leblanc
Topic: 1418 Message: 1418

Hi

In a chat session yesterday about DELFI C 3 with Jean-Pierre VE2AHD we are questioning ourselves about the mission length. As per the
mission web site (see below) even if the satellite should stay in space for "several decade" the mission lifetime is planned for +- 1 year.

As no batteries are in the satellite what will prevent the mission to go where no man has gone before... oups! to go well over the expected
one year period? Components failure? this will most likely be the main reason for a limited time frame life expectation?

As a cute girl cannot give what she don't have i think there is nothing who will prevent DELFI C3 to live for several years aside of a
component failure or a shut down command given from earth. She seems to be made strong but it is an external evaluation...

>
> How long will the Delfi-C3 be in orbit?
> The drawback of the altitude at which the satellite will fly is the decay of the orbit. Due to atmospheric drag the satellite will lose energy, and thus altitude.
> For Delfi-C3 this means that it will stay in orbit for several decades. The Delfi-C3 mission has been developed around a mission lifetime of one year.

The tone must be locked at, if I remember me right, 1600 Hz. If you
receive the tone loud and clear but not with 1600 Hz, then a decoding
is not possible.

Luc,

definitely there is nothing wrong with your gear. I noticed that, the Defli
was at 5 degr (just
a few mins after the AOS) where the signal was booming. I tried to decode
the TLM but after
1 min.... I totally lost the signal !
Nothing heard during the rest pass, till the LOS of Satellite .

Obviously the satellite's TLM sometimes is OFF.

The KEPS i used are from spacetrack i know someone recommend to take those who appears on the ops DELFI page. If its only a KEPS matter
they should be quite far from the real orbit or something is moving in a funny way up there.

I will try to listen sooner on the evening pass over here

....CORRECT Luc ! Probably that is the point. The Keps form Delfi-page is now with... 10 min's delay !!!

I have sent a new file with Keps, where the Delfi is ...10 mins ahead from previous Kepls!

He sent it me a friend of mine and he said it's 100% accurate.

I will try it also with these new Kepls today afternoon.

I refresh my Orbitron KEPS Mak and i just hear DELFI C 3 very loud but there is another problem who come out. The audio was very unstable
the tone frequencies where not stable and some distortion seems to appears during the data transmissions making RASCALS completely unable
to decode even a single packet.

Theses tones distortions gradually increased up to a point the transmitter shuts down. The tone pointer on RASCALS was moving wild
smashing both side limit of the scale and it was not what i got the first time i decoded my first packets.

Why the tone frequencies are no more stable even with doppler correction remain a mystery but surely the control team will come up with
some explanations as they seems to be aware of this behaviour.

End of the story and a night to speculate on the subject!

kEPS are OK at the second the TX start transmitting with less distortion. After 30 seconds "near one minute" the TX shutt down again for a
brief moment and to resume back again transmitting with a bit more distortion.

The 0400Z pass was all OK even if it was a low one 20 packet decoded and DELFI was in full illumination since 0342Z a good 15 minutes
before the pass and everything seems normal. I guess the problems appears just went the satellite is emerging from eclipse and that the
power is just starting to flow in.

I will try to recheck in the evening pass if i got the same results as yesterday evening.

At the end of the pass another carrier with doppler appear i try to check who was the culprit but VO-52 who is on a similar orbit was on
the other side of the earth. I run a simulation on all the other active satellite around 0400Z to see which one will be the best candidate
but none of them was in range!!! Another phantom of the opera signal? I just hope one of the other 8 cubes does not also share the same
downlink frequency!

(A personal opinion).

It's rather disconcerting to see that the squabbling about Delfi-C3 keps on the Amsat-bb has now 'progressed' to the EU-Amsat reflector.

I agree with GM1SXX, there are probably several amateurs decoding the 'noise' generated by the next-door-neighbour's vacuum cleaner.

In protest, my radios havn't been switched on all week ... stamp collecting here I come!.

1437. Memristor??

Yahoo group: eu-amsat
Date: 2008-05-02 01:12:09 UTC
From: Luc Leblanc
Topic: 1437 Message: 1437

Could be an incredible breakthrough who will help the new HEO construction and design pushing towards a battery/solar cell free satellite.

Here is the text

Hardware HP Invents Fabled Memristor, New Class of Electrical Components

---

The researchers formed memristors by crossing platinum nanowires with another wire, with a thin dab of titanium dioxide at the junction. Each wire is a seperate memristor, yielding 17 memristors, each 50 nm (150 atoms appr.) wide. The memristor remembers even after powered off. (Source: J. J. Yang, HP Labs.)
New discrete component from HP joins the ranks of the resistor, capacitor and inductor as the fourth major circuit element

Yesterday Hewlett-Packard (HP), best known as a leading personal computer manufacturer, announced what may be one of the most significant electronics breakthroughs of the decade. Researchers at HP Labs, the central research center for the company, confirmed the existence of the previously theorized fourth fundamental circuit element of electrical engineering.

The new component is called the "memristor" -- a word blend of "memory" and "resistor". The physical working model and the mathematical model of the component were presented side by side in a paper in the journal Nature, yesterday. Four researchers at the lab, led by R. Stanley Williams, presented the device which retains the history of information passed to it.

The device could make for computers that need no boot-up, never forget, use less power, and associate memories much like the human mind. Such possibilities were long considered the realm of science fiction. The realization of the device was 37 years in the making, and many had come to think it would never be created.

The component was initially theorized and named by Leon Chua, a distinguished faculty member in the Electrical Engineering and Computer Sciences Department of the University of California at Berkeley, in 1971. Chua's paper argued that the new component was a fundamental fourth element of electronics with unique properties which the other elements did not have.

By leveraging experience in nanoelectronics, Williams was finally able to realize Chua's creation, over three decades later. Williams was ecstatic about the success. He stated, "To find something new and yet so fundamental in the mature field of electrical engineering is a big surprise, and one that has significant implications for the future of computer science. By providing a mathematical model for the physics of a memristor, HP Labs has made it possible for engineers to develop

integrated circuit designs that could dramatically improve the performance and energy efficiency of PCs and data centers."

The device could eventually make dynamic random access memory (DRAM) obsolete. In current systems, active computers store data in DRAM, but must shuffle the

information to and from a magnetic hard disk or a flash drive, nonvolatile forms of memory. Furthermore, when the computer is turned on, the DRAM must be initially loaded from the magnetic memory. These processes consume both time and energy, slowing computing and raising the energy and heat envelopes of systems.

A memristor would need no boot up as its data would be exactly how it was previously left. Data could theoretically be read and wrote directly to and from memristors, eliminating the need for hard drives, except possibly for backup storage.

With the advent of "cloud computing" -- the transition of data storage to the online world this device becomes even more valuable and timely. The IT infrastructure that's growing to support cloud computing uses thousands of systems, multiplying the energy costs of ram usage exponentially. The new component could dramatically reduce the power, and thus the expense of such systems, as well as helping to protect user data and reducing load times.

One key problem to data centers has always been the possibility of a power loss. The memristor essentially would take away the problem, as barring complete circuit destruction; the data would survive a power outage. The type of memory also offers the possibility of continuously learning and adapting systems, similar to the human brain. Such systems could be used in facial recognition technology, as well as in enabling advanced biometric security and privacy features.

Williams is no stranger to innovation -- he founded HP Labs´ Information and Quantum Systems Lab and has been its director ever since. The lab strives to develop advances in the realms of mathematics and physical science useful to computing. The lab has logged many advances in nanoelectronics and nanophotonics, but the memristor may well go down in history as its most significant contribution.

Hello Al,
The station who copied the telemetry from CanX-2 must be feeling a bit foolish today since the Canadian control station informed the Amsat-bb that the transmitter hasn't been switched on yet.

Likewise, the gentleman copying tlm from a satellite that has deorbited ... nice! one.

The neighbour's noisy vacuum cleaner again ?.

Perhaps it would be an idea for those gentlemen to listen to what a packet tlm frame or ten actually sounds like ??.

PRACTICAL RADIO AMATEUR EXPERIMENT.

If you havn't tried this yet, I can assure you, MixW2 does an *EXCELLENT* job of copying CW from an unsquelched scanner.

The only *SLIGHT* fly in the ointment is that the decoded CW isn't in English !!!!! ... (plus there are a few prosigns that don't belong in the Admiralty's international morse handbook.

... and before anyone turns on the flame thrower ... yes !!!, the last sentence *is* 'tongue-in-cheek'.

Do NOT take this as a reflection on Nick's EXCELLENT program. I used to talk to him daily using his very first RTTY offering on the Commodore 64 !!! - and can assure everybody that 'Old Nick' is a very smart cookie indeed!.

Yahoo group: eu-amsat
Date: 2008-05-03 14:50:50 UTC
From: John Hackett
Topic: 1444 Message: 1448

Rgr! Mak,
Of course, I should have mentioned it ... GM1SXX programmed the PIC for me. I'm sure an e-mail to Al will get you the program.

The controller works perfectly with NOVA and my home brew rotors
(see Observations from Norway, you have the link to our website).

I've tried original Yaesu, Win Prarie, Fodtrack and several other controllers. The PIC controller is the easiest. Mine is still on the breadboard I built it on a couple of years ago.

Hello
John

This is a very interesting and simple interface. Have you such PIC's
on stock ? I think around a kit to publish.

1454. AO-7 passband, CW & SSB segments

Yahoo group: eu-amsat
Date: 2008-05-03 17:46:07 UTC
From: SV1BSX
Topic: 1454 Message: 1454

Hello,

the last weeks I noticed that there are 2-3 stations where they like to work over other... CW stations !
Probably they are deaf, or they are completely ignoramus about Morse-code.

Ok, no problem if they don't like the CW. It is a personal stance that and I can accept it.

But, till now the SSB-ers they used the segment between 145.945 - 145.960.
The CW-ers the segment around of 145.940 (145.935-145-944). So, the QRM was
minimum and rare between SSB-ers & CW-ers.

The only exception for CW-ers in order to be able to use the Middle-PassBand (145.950) is JUST in case
where someone looking for a Long-Distance DX, JUST close to AOS & LOS, JUST for calling CQ.
And JUST in case which the Satellite is without users.

Please Gentlemen, just keep that in your mind.

Keep your TX below of 145.945 if you like the CW, or above 145.945 if you want SBB.

Thus, all we will be more Happy.

And the "Grand Old Lady" too.

Have a nice weekend

Correct !!!! Mak,
... and please Gent's, do remember AO-7 is an INVERTING transponder in mode-B ... so let's try to teach the newcomers to tune in the right direction.

Just lately I've been QRM'med quite severely, despite receiving good signal reports ... full duplex ?? ... what on earth !!! is full duplex??.

(If you don't understand this concept, please return to 80m).

Seriously, 'half' duplex might have a place on AO-51 but it DOESN'T belong on a LINEAR transponder.

....just now I gave-up the Satellite !

From AOS till now, a very *GENTLY guy* tunes and calling HOLLAAAAAAAAAAAAAAA
on 145.940 !!! For about 4-5 minutes !!!!!!

There are 3-4 stations on CW, but I copied only the F3ZD. It was impossible to copy
another German-station (DL2?H??) due to extremely strong FM-ing from SSB.

Sorry Gentlemen, but we must to keep the "Grand Old Lady" clear and healthy.
Otherwise, another ZOO like the AO-51 seems to be born from the bad use
of Satellite.

Hmmm.... it's too sad if we leave 2-3 bad users to make this wonderful Sat another "ZOO in
Space".

Just my 2 cents...

Hi Mak,
Now you know why my callsign has not been heard on AO-7 for the last 7 days.

ISince 2002 've tried appealing to the national society magazine editors to publish "satellite operating proceedure" in their magazines ... to no avail ... you'd think it was in their interest to do so ... though operating proceedure *IS* on the AO-7 Resource Page ... but who reads !!!! what is written there.

I fear the standard has dropped dramatically this last 2 years and IMHO the FM "free-for-all" must take it's share of the blame ... especially since you can walk into any supermarket these days and get a free amateur license with your bag of potatoes.

1459. Rotator control interfaces

Yahoo group: eu-amsat
Date: 2008-05-04 13:08:12 UTC
From: g0wxj
Topic: 1459 Message: 1459

Hi all,

We are about to take delivery of our sat antenna's, 6 weeks late but they are coming. We have a Yaesu 5500 az/el rotator and are now considering the interface we'll need for control. We use Nova for the prediction and pass info an we came across the Foxdelta ST3 interface.

Has anyone any experience with this kit?
http://www.foxdelta.com/products/st3.htm

Initially it looks like an adequate bit of equipment, but would be nice to hear from some actual users.

Cheers

Topic: 1460 Message: 1460

SEEDS is in digi/talker/SSTV mode over eastern NA the voice makes's me remember some old submarine WW 2 film where the radio man listen
"The Tokyo Rose" broadcast. Nice recording with an FM signal peaking at S8 at TCA 18 degrees elevation. SSTV is also good but as usual i
will have to fiddle with the slant correction parameters. This MMSTV version i got seems to have an auto slant correction algorythm but as
usual i found that at LOS... :(

I will check for the next pass over here at 0320Z it will be an higher one.

P.S. If someone is fluent in japanease what HARU HARU HARU means? could be (haro haro haro too)

Hello Folks,
There were a couple of enquiries regarding the rotor control software for the 16F877A PIC controller I mentioned.

I have spoken to the other half - (that's the intelligent half) - of the LA2QAA/GM1SXX team and Al says that if you supply him with a blank 16F877A + postage ... he'll program your PIC for free.

Beat that ! for an offer.

If you're interested, give me a *SHOUT* and I'll send you Al's mailing address.

Hello John

There are 2 types of PICs. The PIC16F877A-I/L in PLCC 44 and the
PIC16F877A-I/P in DIP 40 case. The type in the DIP 40 case is more
favourable. I think, Al can program this type ?

From: Luc Leblanc
Topic: 1464 Message: 1464

At 0322Z May 05 i copy what i think will be the maximum SSTV quality achievable with my present setup. I uploaded them on my web page
www.qsl.net/ve2dwe.

Now i got this from the Masa about what the girl is saying. Here is what he wrote.

Luc,

It's English. She is calling ... Hello Hello Hello. Many JA not good
at L/R pronunciation. hihi.

Can you understand what she is saying before SSTV? She announces
special code. Can you chatch the special code? I guess it is herad to
catch it if it is clear condition. Her pronunciation is not good. hihi

73

Masa JN1GKZ

Masa is right i play-back the digital recorder about 10 times and i still working on it but i will break the code soon i got 89% of it
actually the missing 11% will be broken very soon...resistance is futile as the borg said.

P.S. I see now the background in the picture... the mount FUJII

Hello John, I found Al's address on QRZ.COM. Or is it not correct ?

To the controller: I have one who works properly. Its a self made for
2 KR-5400A's. It works with a voltage measuring board and a relais
board. I have also written my own satellite programs.

I'm thinking around an upgrade to an USB connection or a simpler
COM connection. For both ways the FODtrack interface would be a good
solution. This PICs are not urgent in the moment.

Hi Thomas & Group,

my friend Dimitris, SW1JGW, I think he asking about the comparison between these two transceivers and just for VHF & UHF bands (Satellites).

As I know, the Kenwood TS-790 is *very famous* as "One of the Best" receivers for VHF-UHF, with
EXCELLENT reviews from magazines and operators. Dozens of Hams considering this radio as "The state of the Art", the "Top" V-U receiver..

So, we looking for the truth about this. Is it indeed the TS-790 superior receiver compared with an FT-847 on VHF-UHF bands?

Dimitris, ...he wondering.... and I wondering also !

But we looking for somebody with good enough experience about these 2 radios.

Definitely they are different models, the 847 including HF, 50 MHz as well....
the TS-790 is just a V-U radio (with optional 1.2 GHz).

Therefore the question is:

if you are a Satellite operator and you have into your Shack an FT-847 which
working just on Satellites (VHF & UHF), do you change it that with a TS-790 ?

Personally I will answer YES, if I know that the TS-790 is superior.

But, is it better ???

73, Mak SV1BSX

Yes Thomas, the QRZ.COM address for Al is correct.

The idea is to help any newcomers (if we can) though of course, you are most certainly not that !!! ha-ha-ha.

I havn't been on AO-7 for a while now, I've neen "messing" about with a "package" of information for potential newcomers to LINEAR satellites. The trend (at last !!!) for them is to upgrade from FM to linear ... we'll need such for when we get an HEO.

Have a good day Thomas.

Hello Simon,
As far as I can assertain, there is nothing CONFIRMED.

There have been a few dates bandied about on the various Amsat reflectors and the Amsat Germany page - but it appears to be WISHFUL THINKING.

The hardware, for all intents and purposes is pretty much 'on track'
(pun intentional) but securing a launch is a different matter.

The days of near free HEO piggy-back launches are over ... you don't want to know !!!! the cost of a commercial launch these days ... the only positive sign is that there are more countries jumping on the bandwagon - (launchpad) - these days but "amateur" equipment is a *LONG* way down the list.

I'll bet you my boots !!! Amsat will get a 'surprise' with their latest idea for a free launch. The commercial companies are *NOT* going to give Amsat space when they can sell it for several million $.

We should have secured "ties" with China two decades ago. Why China? ... because they have the capability of going where we want to go (HEO) and an international cooperation would have been advantageous to them as well as us.

I suggested this 15 years ago but was "flamed" quite severely for such a suggestion.

I have purposely been "longwinded" answering your query Simon because it was a very good question indeed - and I'm sure there are many people wondering about it.

Since I'm 'bone-idle', it will (hopefully) save me answering the same question several times.

Have a good day.

Hello Simon

The last launch date for P3E that I heard/read from is November 2008.
But this date will slip, I think. If I know the date, I will let you
all know it.

Bob McGwier wrote in a mail several month ago in AMSAT-BB, Eagle would
launch earliest in 2010. But this date is speculative. They have also
their geostationary project. About this I have read only flaming discussions
and nothing concrete, no proposal.

The P5A Mars orbiter, which uses technology to be tested on P3E, is scheduled for 2011, I believe the next suitable date is 2015 if the 2011 launch window is missed.

Clearly they'd like to have P3E up at least a year before P5A to test out the systems that will be used on P5A. So from that I conclude AMSAT-DL will be trying to get P3E launched sometime in 2009 either from the European Space Agency or the Russian Federation launch sites in Kourou.

I hadn't seen anything anywhere on the web regarding launch opportunities for Eagle so something in the 2010/2011 time frame wouldn't suprise me.

I guess the big problem for both satellites is getting a suitable launch opportunity that doesn't cost over half a million dollars.

Simon,
I think now you'll understand better my earlier mail.

In the case of oscar 40 *MANY* amateurs donated *A LOT* of money over a *LONG* period of time - which augmented the donations by various international Amsat groups and a couple of significant commercial 'donations'.

Two 'incidents' have contributed to a drop in interest for amateur radio satellite operating, namely, the 'all eggs in one basket' phenomonen followed by the consequative FM catastrophe.

FM is quite unsuitable for satellites since it is a single user mode and is very inefficient. The capture effect ensures that the 'mine's bigger than yours' mentality prevails. *NOT* the smartest move Amsat have made ... but the single most reason people started to vote with their feet - (walk away).

The result is there for anyone to monitor - but the Amsat b.o.d. still insist this was a sensible move.

After the unfortunate AO-40 gas explosion amd the FM thing, this kind of funding will *NOT* happen again.

Another reason that Hams are reluctant to donate like they used to is a consequence of Amsat's actions following Richard Limbeare's 'UNOFFICIAL' referendum several years ago where Hams by a rather large majority voted 'AGAINST' the "all eggs in one basket" mentality ... however, Amsat ignored this and went ahead with AO-40 and thereafter AO-51.

'Selling' amateur frequencies to universities will also probably prove to be detremental to amateur satellite operating though there is a school of thought that this is the way to go ... sell-out or saviour ... time will tell.

That's the problem.

With enough money you can buy a launch but if you don't have the money your scope of launch opportinuties are severely limited.

The cheapest form of launch is for a CubeSat, I think that's about $40,000 for a tiny satellite that's just 10 cm by 10 cm by 10 cm to go into a 650 km high orbit.
P3E is a lot larger than that.

It wasn't a gas explosion, it was a plate bolted across the outlet of the motor that caused the problem - lots of thrust with nowhere to go !

BTW I'm not aware of anyone on the AMSAT-NA board who isn't keen to see satellites with linear transponders in decent orbits.

We need either HEO or OSCAR-7 type 1500 km orbits instead of the sub 1000 km orbits that linear transponder sats such as VO-52 have gone into.

The question is how do you get a satellite into a suitable orbit ? Plenty of launchers will get you to a 650 km orbit but unless you've the money to pay for it getting a launch to higher orbits is problematic.

It's why the Phase-IV agreement with Intelsat is so valuable

http://www.uk.amsat.org/content/view/576/86/

It will enable Amateurs to put payloads Geostationary satellites and perhaps get some funding from the US Department of Homeland Security. I'm sure those of us on this side of the Atlantic hope the first one goes on a Geo located about 60 degrees west.

Hello Al,
Just built up my 'dummy' rotor again. (see pic) for 'test' porpoises ... (and other sea creatures).

(the spelling error was intentional folks).

My 'real' rotor (outside) also uses the tube in a tube type ofcrossboom though I didn't use my crutch for that one like I did withthe 'model'.

As long as I keep it well oiled it works in minus 20 degrees of snowand ice ... unlike Yaesu's elevation rotor which throws in the towel ata mere minus 12.

The La2qaa elevation rotor uses an electric screwdriver and a threaded rod.

The 'model' is to illustrate general construction proceedure for the newcomer.

I agree. Additionaly you must find the right vehicle which can bring
the satellite to the right position for a HEO-orbit. This makes the
situation not easier.

Trevor, it was a gas explosion. There was a new motor mounted into the sat
with one more valve with a red flag for "Remove Before Flight". This "RBF"
was forgotten to remove and caused the explosion thru overpressure of the
high toxic fuel. You can read the story here:
http://www.wikimirror.com/AO-40

1488. Intelsat and amateur payloads.

Yahoo group: eu-amsat
Date: 2008-05-07 00:20:42 UTC
From: John Hackett
Topic: 1488 Message: 1488

Hello Al,
I *SERIOUSLY* doubt there will be an amateur payload on a launch vehicle that carries an INTELSAT satellite to GEO ... at least in my lifetime.

As you know, this is *NOT* the first time Amsat-NA have thrown out a white elephant when the b.o.d. have been under pressure ... remember what Russ said? ... and as Editor-in-Chief for so many years, he ought to know ... and it's *NOT* the first time Amsat-UK have swollowed the camel whole.

When Mak and I started this reflector, one of the criteria was that each person would be entitled to their own opinion ... (providing he/she kept it clean).

Please bear that in mind folks ... no flaming, lets leave that to the Americans.

BTW Trevor, I still believe it was a gas explosion that knackered P3E.
Of course, much depends on where one gets one's information from.

The Russian are supposed to move one of their launch site to French Guyanna if i remember correctly what i read somewhere on the internet.
The same rocket will be able to carry a larger payload at this near equator position. Is this can make some room for ballast weight? P3E
and Eagle if one day they can be completed can potentially take the place of the ballast weight!

P.S. It's fun to read again on the HEO'S. Last time i was involved in this kind of discussion on AMSAT-BB i upset the BOD up to a point
they censored me as a XXX movie... But they are more concern actually in promoting the AMSAT logo on a race car and filled up room at the
Dayton hamvention...

For their intelsat project amateur satellite version 1.10002.3888a they are always running for the cutiest girl who show up on the dance
floor instead of choosing the next one who is less busy... not ugly but who can be a good dancer too.

AMSAT-NA will have time to convince me they will put as much energies in the actual "modified" project against the will of some "builders"
the one the BOD should have to twisted their arms to make them swallow an Eagle satellite far away of what they want to do...If you read it
correctly i wrote WHAT THEY WANT TO DO not what their membership wants.

Final result members goes out with their money. Speaking of cubes i don't know how much is the total weight of 8 cubes but something as AO-
7 or AO-13 can be an interim solution! I just hope to see how DELFI will perform when he will be in the transponder mode?

I watched DELFI C 3 when he goes out eclipse. As soon as he get some light he start to transmit his data but and as reported by some
listeners he stopped transmitting after one or two minutes and he normally does not come back even if he's in full light.

My question: is it normal or is it a problem?

Thank's for your inputs

P.S. SEEDS is now in CW TLM mode i try to decoded with CWGET but he's not reliable i will have to recorded and decoded it after...Pain in
the neck as my CW is a "bit" rusty Did any one try another CW decoder who at least put gaps between TLM strings?

Too lazy to copy CW

As of today, the 7th of May, the Amsat website page has keps for AO-40 and various other satellites that are non-operational ... but it does *NOT* yet have keps for Delphi-C3 and or the other recently launched cubesats.

Yea ... yea ... I know - volunteer organisation etc ...

It's NOT* a complaint, it's an 'observation' - because I wanted to download the keps to my mobile phone tracker.

I could load them manually from Celestetrack of course but La2qaa is far! too bone idle for that ... it would take at least !!! 5 minutes ... pah!.

A single press of a key is pushing the limit of La2qaa's intelligence.

Hi all

it's a very interesting point that dear friends. As I read on wikimirror:

"The Command Team were able to infer that there had been

an explosion caused by pressure in the propellant pipes

caused by malfunction of the control valves. A protective cap

that was supposed to be removed from the motor before launch,

was inadvertently left in place. When the motor was fired,

pressure built up where it shouldn't, and destructive failure occurred".

Is it another scenario that? "Protective cap"??? what CAP?

I have heard about the "Remove Before Flight" FLAGS.

But this scenario is funny. These RMF-flags are from ..paper!

How is possible a small triangle-flag to destroy a Rocket-engine?

The propulsion power on the rocket-exhaust is high enough to... evaporate

anything like that .

Have you seen the Video with the Police-Car behind of an airplane?

when the airplane push for full-power the Jet-engines, the police car is... "tumbling" for about

300 m, like a toy. Of course the Newton-motor onto AO-40 wasn't too much

powerful like a B-747 airplane... but respectively it wasn't a... car "glued" on rocket -exhaust of AO-40.... it was just a small ..paper RBF-flag !

And finally, how the "Wikimirror" got this information about protective-CAP? from AMSAT-DL? I can't find anywhere something about it. And I wondering....

No Mak, not the flag but the forgotten cap destroyed AO-40. This
red flag says: "Remove this before flight".

1495. Not Amsat bashing.

Yahoo group: eu-amsat
Date: 2008-05-07 10:59:12 UTC
From: John Hackett
Topic: 1495 Message: 1495

Hello Ladies and Gentlemen,
I can neither confirm nor deny the details surrounding the failure of AO-40 - simply because I wasn't there when it happened ... I just wrote what I read ... however, I *CAN* confirm that several years ago I was personally approached by a prominent member of the Amsat b.o.d. with an offer (one that I declined) ... an offer that was knowingly incorrect.

The object of the exercise was to have me toe the party line when I'd asked why a certain matter had become Amsat policy despite the majority of paying members being clearly against the proposal ... but
this is nothing untoward in 'business' or in party politics.

The usual common denominator applies ... shut up, sit down and stop rocking the boat ... (we know better than you what you need).

My apologies for using the word politics - but this 'is' - (intentionally) - an open reflector and the content is 'satellites'.

This is *NOT*^intended to be part of an 'AMSAT BASHING' campaign ... just an attempt at putting things in perspective.

Based on memories from that time i remember having read something about a faulty valve who failed to open when the command has been sent at
the first time. The control team send another command to make this valve work she open but again failed to closed on time making AO-40
going too far away in a wrong orbit. they afterwards used the cold engine motor to correct the orbit to avoid an early deorbit. A lot has
beeen said and wrote on the incident but this valve issue was pointed to explain some corrosive gas leakage in the doomed satellite body.
who conducted to a lot of cascade failures.

They where aware before launch of theses valves issues...another unexplained AO-40 mysteries.

BINGO my friend Luc !!!!!!!!

just the same I remember.... that was the point, a faulty-valve and not
some ridiculous stories about flags and... forgotten CAPs.

BTW, the procedure before the "lift-off" of a satellite it's very-very
scholastic procedure. It is not there just a man which looking for....
unbolted screws !
It is a long catalogue with a carefully procedure and take place
twice. For a long time. In order to eliminate any human -error.

So, how is possible to accept the human-error about CAPs and Flags?

Sorry my friends, that it's a really funny story. And it's much more funny
because
in practice we've never got a good explanation about the AO-40's failure.

That confirms to me that:

definitely something was very bad... and probably it was too bad so as some
peoples they had a VERY good reason to hide it, in order to avoid the
clamor
from the World Ham community.

Keep in mind, it wasn't just a Satellite... it was the BEST, most complex
Ham-sat
that ever flown... a 5 million's object !

And, 5 million's dollars it's a very good reason for... lies!

I have to control me now, that I'm not "flamable". Mak, if you leave a
cap on a workable valve, does the valve work ? NO !! IT DOES NOT !!
Then you can send millions of commands, the valve would never work with an
forgotten cap on it. OK ? No Bingo.

Subject: Another P3D Possibility
Date: Wed, 7 May 2008 17:32:57 +0000

Hi John,

Since 'something' went seriously wrong with P3D's propulsion system, one possibility is that the combustion chamber plug WAS removed BUT another one wasn't. Hypergolic motors have fuel, oxidiser and nitrogen lines as well as various vent and purge lines. The nitrogen is used to pressurise the fuel and oxidiser tanks to force fuel and oxidiser into the motor. Because Nitrogen is inert, it can also be used to 'blow down' said lines to purge them of fuel and oxidiser. It's possible that a mistake here in the blowdown procedure caused the explosion. I'm sure we'll never be told the full facts. It's normal to blow down or purge the unburnt substances out of these lines between rocket firings. perhaps one of the vent/purge lines was left blocked with a cap. That would have caused BIG problems.

> know how much is the total weight of 8 cubes but something as AO-
> 7 or AO-13 can be an interim solution!

I believe P3E will be about 150 kg that's the weight of 150 cubesats (cubesats are about a kilo each). BTW OSCAR 7 weighed the same as 28 CubeSats.

> I just hope to see how DELFI will
> perform when he will be in the transponder mode?

It's transponder power level is almost 12 dB down on Oscar 7 when that was launched so the signals will be weak and range will also be limited as it's in a very low orbit but it's an exciting satellite as it achieves many things have never been done before on a CubeSat.

1503. Re the P3D controversy.

Yahoo group: eu-amsat
Date: 2008-05-07 18:10:43 UTC
From: John Hackett
Topic: 1503 Message: 1503

To those concerned/interested,
Bear in mind that a FACT is ... "something that is known" ... it is *NOT* necessarily what actually happened to P3D. The following are conflicting reports from 3 different organisations based on received tlm about what 'probably' happened.

I think it's safe to assume there *WAS* a gas explosion - as I originally mentioned.

73 John. <la2qaa@...

.....

(Wikipedia)
Operational problems
On 13 December 2000 at 11:23
UTC, transmissions from AO-40 ceased during the exercising of its 400 newton motor. The Command Team were able to infer that there had been an explosion caused by pressure in the propellant pipes caused by malfunction of the control valves. A protective cap that was supposed to be removed from the motor before launch, was inadvertently left in place. When the motor was fired, pressure built up where it shouldn't, and destructive failure occurred. The loss of the motor caused AO-40 to be left in an equatorial orbit that the satellite was not designed for.

As
a result of this incident several pieces of radio equipment no longer functioned or were not able to be commissioned. Following strenuous efforts by the Command Team, signals were restored on 25 December 2000 at 2145 UTC when Command Team member Ian Ashley (amateur radio call sign ZL1AOX) of New Zealand successfully sent a 'reset' signal to the satellite. Onboard cameras were used to establish the attitude of the satellite, and the magnatorquer system was used to spin-stabilize the satellite.

During June 2001, gas from the arcject motor was
vented to raise and stabilize the orbit of the satellite. The spacecraft got a lot higher than expected. Subsequently, the communication packages and cameras were gradually re-activated.

==========
AMSAT-NA
hortly
after launch a plugged valve vent on the 400 N motor prevented proper functioning of the burn valves and had probably allowed build-up of fuel pressure in the cooling coils around the motor bell housing. These coils apparently ruptured and in the process damaged one or (less likely) both of the burn valves. During cycling of the pressurization

valve the following day, one component of the fuel apparently escaped from the damaged burn valve at the motor housing and mixed with residual second fuel component in the motor, creating a localised explosion. During this cycling (which should have been safe since the burn valves were indicated in the telemetry as closed) the spacecraft suddenly went silent. This pressure wave seems to have vented primarily through the centre section of the spacecraft, damaging the omni antennas on the opposite end and perhaps removing part of the covering from the omni end of the spacecraft. AO-40 was recovered several weeks later but several of the subsystems were no longer functioning.

In January of 2004, AO-40 suffered suffered a catastrophic failure of the main battery which is clamping the buss voltage at a low level. This shut off the S2 Tx, and probably crashed the IHU-1. Subsequent efforts to recover the satellite failed, and although the main and aux. batteries were been tied together there is not enough voltage at this time to recover the satellite.

==========

ARRL

Immediately after launch, AO-40 seemed to be working properly, although something was wrong with its 70-cm transmitter. The satellite's elliptical orbit needed to be optimized for best communications. On December 13, 2000, as ground controllers tried to maneuver AO-40 in orbit, the satellite unexpectedly went silent.

After a couple of weeks of consternation and efforts to communicate with AO-40 and restart the onboard equipment, there were great sighs of relief in the AMSAT world when the 2401 MHz S-band beacon turned on at ground command on December 25, 2000. The resurrection of AO-40 was viewed as a marvelous Christmas present.

Unfortunately, other systems in the satellite now were either not working at all or not working correctly. Most noticeably, the 2-meter beacon transmitter, which had been heard loud and clear transmitting telemetry in the days right after launch, now appeared to be dead.

AMSAT-NA President Robin Haighton, VE3FRH, said that while the Phase 3D team may never know exactly what happened, the likely scenario includes what Haighton--in an interview with ARRL--called "a minor explosion" aboard AO-40 that apparently damaged or destroyed some systems. Haighton said that the 400 N propulsion motor could have "burped" or "popped' as out-of-place fuel mixed and then ignited as a result of a blocked exhaust port on a helium valve. The problem was attributed to a pre-launch human error.

> ... here's a pic of the offending plug actually being removed.

Question is when was that picture taken ?

Prior to launch it was believed there may have been an issue with the motor. It was removed and shipped back to the manufacturers for testing. The manufacturers returned it as "Working OK" and the motor was refitted. Unfortunately the manufacters put a cover over the outlet which had been bolted on. The new cover didn't get a "remove before flight" tag added and so wasn't.

I think it's about time to put a notice on the AO-7 log again for the benefit of those who *CAN'T* see what everybody else does.

PA1NTO at 14:45 ... then again at 14:46.
PE1BVQ at 16:26 ... then again at 16:40.

If people make a mistake they *CAN* correct it ... (tick the *REMEMBER ME* box and edit the entry with the hourglass).
.....

PLEASE !!! ... ONLY ONE ENTRY PER PASS ... (max 6 stations worked) ... MORE !!! than 6 stations per pass and you may use two entries for the same pass.

The QSO's pane means the callsign of the station you worked, *NOT* the fact that you called CQ. There are lots of stations calling CQ who never put an entry in the log so a a mere CQ really of much interest to anybody.

There is a dedicated COMMENTS pane
.....

Hello John, Gentlemen

This is a very interesting mail from Al. It's possible, that I was
not clear enough in my previous mail. My apologies to those who
misunderstood me.

The manufacturer of the motor, a company in Germany, delivered
AMSAT-DL with its motors for P3A, AO-10, AO-13 and AO-40. The new
motor had 1 valve more than that for AO-13. The company (the name is

not present now) informed AMSAT-DL about the additional valve correctly. But between AMSAT-DL and the american integration team was a communication problem. This was the reason, why the cap with its red flag was not removed from this additional valve.

This are the facts which I knows from serious sources. All other is speculation or nonsense or rubbish.

Well I'm sure we'll know in 2011.

Certainly Emergency Communications capability is a key priority of the US Department of Homeland Security and the AMSAT-NA Advanced Communication Package (ACP) neatly fits that bill.

Thomas,
I'm glad you were able to confirm that someone at Amsat stuffed up and confirmed my original mail that started the P3D thread.

Chris,
AO-7 telemetry. The parameters of channel 6 must be 650, 651 or 652. If they are not, the telemetery is corrupt.

GM1SXX and myself collected and analysed the telemetry daily for 3 years and I discovered a couple of things that were 'NOT* as published in the 1974 Amsat newsletter.

This was later confirmed by Jan King, the project manager, whom I still correspond with.

To whom it may concern,
When I used the phrase 'amateur payload' I should of course have been more specific.

I meant a payload that amateur satellite operators could use to communicate with eachother.
This is *NOT* what the Intelsat package is.

The Amsat b.o.d. didn't make it clear that the package was for emergency communication use only ... nor did they inform the membership of the proposed cost.

When this 'news' eventually filters down I expect there will be a change of attitude.

Selective availability for selected users only kind of way to implement an AMSAT-NA per paying members/users only system. The first
restriction NA coverage, the second communication protocol. I doubt that any national emergency system will be wide open to the crowds!
and the crowds walked without their shoes in the US airport departure checking point...
Funny smell around the rubber conveyor belt.

This whole story sound weird as weird as the commercial Satellite packet gateway where amateur radio packet where transmitted through
their commercial data streams few years ago.

As AMSAT-NA have said there will be more than one payload.

BTW I don't know where you get the idea that the ACP package is for emergency use only ?

The Intelsat arrangement offers 400 W of dc power for 15 years, you can do quite a lot with that.

To quote AMSAT-NA "The Phase IV Lite Geosynchronous Payload is planned to consist of similar transponders already under development for the Phase 3 satellites."

I wish AMSAT-NA every success in their venture.

Trevor,
I'm sorry if I was a tad incoherent.

As the story goes ...

Amsat-DL informed Amsat- NA of the extra valve on the new type of motor but apparently there was a misunderstanding with the consequence that the offending 'plug' *WASN'T* removed.

Therefore, (as the 'official' story goes) proceedure *wasn't* followed and the fault was 'human error'.

As has already been mentioned by Mak, any flight vehicle must pass a *VERY* stringent proceedure before it gets the green light before take-off, all pre-flight 'tests' are at least !! in duplicate.

A bit strange that nobody noticed the offending plug and red flag 'eh? ... that is, assuming you accept that 'explanation'.

My point was that Amsat-NA didn't do a very good job of laying a smokescreen, with the conflicting reports, it's quite obvious someone somewhere is "fibbing" or ... at best "stretching" the truth ... whom? ... we shall probably never know because the person/people concerned will probably pass the buck anyway.

IMHO, a *VERY* sensible comment from Luc.

The best way to ensure it *DOESN'T* happen again is to document precisely what did !! happen ... and then take measures to ensure it *DOESN'T happen again.

Of course the person/persons responsible for the pre-flight checks would have to go into detail ... did they tick off each item on a piece of paper? ... etc ...

I'm sure !!! the person who made the gaff will own up to it ... (not).

Trevor,
Perhaops I have misunderstood something. You said ...

>To quote AMSAT-NA "The Phase IV Lite
>Geosynchronous Payload is planned to
>consist of similar transponders already
>under development for the Phase 3 satellites."

Did I misunderstand? - or was this the Amsat-NA b.o.d.'s *idea* ... or ... as you seem to imply, has there has been an agreement/contract drawn up with Intelsat?.

If there has, I stand corrected and publicly apologise for possible misinformation .. however ... on the other hand, if the above information is only the b.o.d.'s plan/intention - it would be good to know.

Personally, I doubt very much that a commercial company would allow an amateur enterprise to have the space at a fraction of the cost they could get from a commercial venture to LEO. We're talking millions of dollars.

I really don't think Amsat-NA has the clout - despite what they try to impart to the paying public.

Trevor,
That statement only tells me of a 'plan' - not a contract.

A plan doesn't necessarily mean something *WILL* happen ... and that is my point.

I had planned to be a millionaire by the time I was 30.

I'm 62 and as poor as a church mouse ... which is, incidentally, why I'm still using my original FT-290/790 pair ... albeit, with some home brew gear for auto doppler tuning etc.

Perhaps there *IS* an Amsat-NA/Intelsat contract and I have "missed" the pertinent information.

Er' ba' gum lad, woz that a flying pig I saw?.

From: John Hackett
Topic: 1488 Message: 1526

Hi Trevor,
Thanks for the links, which, naturally I have read before.

Bob posted these 'plans' some time ago on the Amsat-bb.

What I see is speculation, wishful thinking and Amsat b.o.d. 'plans"'... (nothing whatsoever about anything concrete from Intelsat) or the American M.O.D. regarding Amsat ... which is what I implied in my original mail ... wishful thinking.

As I mentioned previously, even if it does happen, I doubt it would happen in my lifetime.

There's a paragraph in the 'plan' that states (words to the effect of) - 'space permitting' - in my opinion, there's the rub, considering what that 'space' could be sold for but you never know, somebody in Amsat might win the American lottery and "donate".

I of course also wish every success to such a venture as the b.o.d. propose and would be extreemly happy to be proved wrong. ... I just don't think it will happen, that's all.

1528. AO-7 tlm.

Yahoo group: eu-amsat
Date: 2008-05-11 06:28:56 UTC
From: John Hackett
Topic: 1528 Message: 1528

Apologies folks, forgot to sign the following 'parable' - so you wouldn't have known who to blame.

Crikey, my 'periodic Altzheimers' is accellerating ...

73 John. <la2qaa@...>
.....

Ron,
(and any other interested parties) ... Be aware that 98% of the AO-7 tlm is rubbish. The satellite is has been sending incorrect frames for several years. You can check this yourself by monitoring the 6D parameters.

They should be either 649, 650 or 651. If they are not, the tlm is incorrect.

It has to do (mainly, but not only) with the power budget ... this is why it is imperative certain 'clowns' stop hitting it with too much power. It is essentially a QRP satellite and the 'gentleman' who proclaimed one needed an 80w BRICK, last year on this reflector. is wrong, wrong, wrong.

The following is a recent e-mail to me from Jan King, AO-7's project manager.

(I maintain a rather large database regarding this satellite and have just about all the information available on AO-7 in several maps).

A *LOT* of information is contained on/from The AO-7 Resource Page if one cares to follow the links.

EU-Amsat (c/o SV1BSX) maintains the distance records for AO-7.

The foll0wing is an e-mail from Jan.

73 John. <la2qaa@...>
.....
.....

John.

Telemetry received may be good or bad. You can determine if the telemetry is good by the 6D value. It is the reference voltage for the analog TLM system and it should be around 50. If not, then the remainder of the telemetry will be incorrect.

(clip) Jan King, W3GEY notes that AO-7 had (has?) a very sensitive receiver and a good uplink antenna. 5 watts EIRP should provide a good downlink (clip).

Amplifiers are not required for the uplink. Excessive uplink power may be cause FMing of the transponder and may be causing the input voltage to the regulator that provides 6D to fluctuate causing all telemetry to be bad. AO-7 is almost certainly running only off the solar panels. It is very likely to be on only when in the sun and off in eclipse. Since it

is resetting each orbit it may not come on every time. Reports of hearing the beacon just as it comes out of eclipse would be particularly interesting.

1. Speculation that long term chemical changes in one or more battery cells have led to increased cell resistance enabling the spacecraft to operate while in sunlight are correct and

2. Reports indicating that beacons, telemetry systems, and possibly transponders are operating

Then

The prognosis for long term spacecraft operation are excellent.

Channel Measured Parameter Measurement Range Calibration Equation (Preliminary)
1A Total Solar Array Current 0 to 3000 ma I = 29.5 N (ma)
1B +X Solar Panel Current 0 to 2000 ma I = 1970 - 20N (ma)
1C -X Solar Panel Current 0 to 2000 ma I = 1970 - 20N (ma)
1D +Y Solar Panel Current 0 to 2000 ma I = 1970 - 20N (ma)
2A -Y Solar Panel Current 0 to 2000 ma I = 1970 - 20N (ma)
2B RF Power Out 70cm/2m 0 to 8 watts P = 8(1 - 0.01N)^2 (watts)
2C 24 Hour Clock Time 0 to 1440 min. t = 15.16N (min)
2D Battery Charge/Discharge -2000 to 2000 ma I = 40(N - 50) (ma)
3A Battery Voltage 6.4 to 16.4 V V = 0.1N + 6.4 (volts)
3B Half-Battery Voltage 0 to 10 V V = 0.10N (volts)
3C Bat. Chg. Reg. #1 0 to 15 V V = 0.15N (volts)
3D Battery Temperature -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
4A Baseplate Temperature -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
4B PA Temp. 2m/10m -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
4C +X Facet Temp. -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
4D +Z Facet Temp. -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
5A PA Temp. 70cm/2m -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
5B PA Emit. Current 2m/10m 0 to 1167 ma I = 11.67N (ma)
5C Module Temp. 70cm/2m -30 to +50 deg. C T = 95.8 - 1.48N (deg. C)
5D Instrument Sw. Regulator Input Current 0 to 93 ma I = 11 + 0.82N (ma)
6A RF Power Out 2m/10m 0 to 10,000 mw P = (N^2)/1.56 (mw)
6B RF Power Out 70 cm 0 to 1,000 mw P = 0.1(N^2) + 35 (mw)
6C RF Power Out 13 cm 0 to 100 mw P = 0.041(N^2) (mw)
6D Midrange Telemetry Calibration 0.500 V V = 0.01N(0.50 +/- 0.01) (V)

AO-7 telemetry format:

1aa 1bb 1cc 1dd
2aa 2bb 2cc 2dd
3aa 3bb 3cc 3dd
4aa 4bb 4cc 4dd
5aa 5bb 5cc 5dd
6aa 6bb 6cc 6dd
Hi Hi
then these data are valid when 6D is one of 649, 650 and 651.

73 Jan W4GEY/VK4GEY

Just near the end of the SEEDS pass i copy another doppler affected CW signal. The short CW transmission start with XIV and strings of
numbers. I think it is CAN X but i don't get a lot of details on their web site.

Signal was quite load to interfere with SEEDS signal?

Hi Luc,

That's one of the Cute satellites.. CO-55 - CO 58..

Thanks,

Chris

Thank's Chris

It was CO-55 launch in 2003 as per the WEB site telemetry frames start with CUTE but i copy "xiv" ?

Hello Luc

XI-V is CO-58. When SEEDS has LOS and CO-58 has AOS at the same time, it could be possible, that you can continue with CO-58. The QRG of CO-58 is 437.4637 MHz, from SEEDS it is 437.486 MHz. But both Sats must have an overhead-pass.

1533. SEEDS Packet

Yahoo group: eu-amsat
Date: 2008-05-13 14:09:55 UTC
From: Keith
Topic: 1533 Message: 1533

I using an old MFJ 1278B 1200 baud AX.25 Packet TNC and trying to copy SEEDS packet telemetry. All I'm able to copy is what is a good callsign field but then it looks like the data is all hieroglyphics.

Eg.

cmd:JQ1YGU>JQ1YGV [05/13/08 13:27:46]:
ù□°+h□□□ □ □ À
□
□
□□□□□□□ z□ûÌ²«□D□g□ý □ □ø□d□ □¢□' +

Is anyone getting good, plain text packet copy? Any idea what I'm doing wrong here?

TNX Keith

In 17 years of satellite operating - and literally thousands of QSO's, I'm proud of the fact that I have actually had 2 - (that's two, folks) - QSO's on FM. I believe the last one was W3SM/OE on AO-27 about 10 years ago.

For want of something better to do today I went outside with my arrow aerial, a MYCOM handheld scanner and a little IC-E91 (also handheld) to have a listen to AO-51 ... (I've heard it described as a "zoo").

I monitored the 16:15Z pass over Russia/LA/Europe/UK and what I heard can only be described as the worst operating I've heard in 41 years of radio.

There were stations battling it out with the mine's bigger than yours mentality, stations "hogging" it, constantly calling CQ, CQ, CQ, CQ, CQ, CQ, CQ, CQ, CQ, CQ ... pause for breath ... CQ, CQ, CQ, CQ, CQ, CQ, CQ, CQ, CQ ... (no callsign given but obviously a Russian station), Several stations replied to this gentleman but he was obviously *NOT* hearing them. There was the 'obligatory' awwwwwla, awwwwwla, awwwwwla, awwwwwwla - (the mic-shy gentleman who can't find his downlink).

(Don't these clowns have receivers ??.....LA2QAA)

AO-51, what a wonderful resource for showing the non-amateur listeners that these operators are fully competant to operate an emergency network like the one mentioned planned for Intelsat.

I'm absolutely convinced !!! Intelsat will welcome such operating with open arms!.

My (non-amateur) neighbour's immediate comment was - "I'm glad my !!! life doesn't depend on you lot, it sounds like a fox loose in a henhouse".

I'm ashamed to say, I absolutely agree with him.

I also sincerely hope that the standard of operating (read: disipline/ proceedure) is better in North America than it is in Europe - actually, I've listened via N1DID and Echolink, as well as the promo video so I know it is.

Hello Keith

```
You are doing nothing wrong. It looks like the data is binary.
Switch the TNC in KISS mode: KISS ON. Then open a file (*.kss) in
your terminal program to save the kiss file. This file you can
send then to the controlstation. To reach the CMD mode again, type
Ctrl-C 3 times.

Hello Al,
Dave said ... "There is no "COMMUNICATION" on AO-51".

Think about it - a *VERY* profound statement indeed.

My previous post certainly opened up a can of worms ... and about time !!! too.

Dave has 57 years in radio so beats me by 16 years !! ... over 30 of them on satellites so I don't think he's much of a ... err ... newcomer.

Hello Folks,
Just to show that not everybody !!! on the other side of the pond has been browbeaten into thinking FM satellites are are good idea.

A single user mode is fine for a military closed link but is not very smart when it is to serve many users in the same footprint.

Reality or fiction!

It is hard to make those who never use AO-40 believe that an HEO is exactly why they use to run for when they get their Ham licence "the
ultimate DX contact."

Ham radio is communication first as the experimenting can be done in any basement up to building and launching rocket and baboon.

Take the communication out and the amateur satellite will be useless. I have more than 800 QSO in my AO-40 log and i made my satellite
DXCC on this bird.

Any LEO sat FM one channel or transponder offer a very limited communication window and range. Called them easy entry sats or anything else
they will remain whet they are short communication window satellite and short range sat.

Personally i found them better than nothing and they are now so EASY that even university students launched them in mass. Over the last
week end i check the HF bands and i contacted a Croatian station only using an inverted V dipole with 100 watts it was EASY too.

Again speaking only "COMMUNICATION" LEO sats will remain a limited communication tool. If DX is still meaning something it is not on the
LEO'S we will experience it.

Exceptions:

AO-7 make some DX possible and the LEO'S on the AOS and LOS edge too but the HT'S are no more reliable as the "EASY SAT" marketing
concept... tends to make us believe.

Focusing only on SDR radios and trying to be ahead of the electronic space science is a noble move but if the price to pay is having to
wait 30 years to see the next HEO in the space will only ended up in a dead end.

Europe HEO'S project seems to be a reachable target in a normal life span...and yes HEO'S are not for the poor man amateur satellite OP
where we need more than QRP power and hand held/rubber duck combo! Cheap combo's will be always big seller... Why do you believe some are
telling us "mind your own business"?

Just see now the AMSAT-NA Dayton last dinner list:

The following people have registered for the AMSAT/TAPR dinner:
Melvin Musulin - 2
Jeff Kelly - 2
Larry Dietrich

Joe Prokop
Brian Gaffney-2
Bob Lumpkins-3
Robert Kunz
Bernard Barnes-2
Scott Cowling-2
Hardmans-8
Mark Kilmartin

Surely a lot of very good folk's but i don't remember having heard them on any satellite recently? (more TAPR than AMSAT'TERS?) but they
are surely very nice people to discuss with in a social club... Did AMSAT-NA is actually a social club more than an amateur satellite
operators and launchers club?

The question remain open!

1539. Valves, faults, opinions & comments...

Yahoo group: eu-amsat
Date: 2008-05-18 13:43:46 UTC
From: SV1BSX
Topic: 1539 Message: 1539

Hi to all,

I am very busy the last period and I was "outside" for a couple of days. Just now I read my Emails from Eu-Amsat Yahoo Group.

Well, I am really surprised with some of them! And even if passed more than a week, I should give an answer.
Some peoples here they have probably received something wrong .

I had a different opinion with someone here about the AO-40's fault. After that I read to commented me about my opinion... Very aggressive.

BTW he wrote that the AO-40's fault was from some forgotten CAP and thus the fuel-valve became faulty.

OK, it's a possible scenario.

But, can I have the *right* to believe something different from the scenario with "Cap & flags"? ??

Definitely I have this right !

He pointed out also about the respect... but probably the same person ignored the RESPECT to the different opinion. To "my" opinion. (I wondering... are you ..."punishing" me because I am not a "Yes Sir" man and I have a different opinion?)

And I wondering also for what all these about... the difference was that, someone said that the fault was from a CAP and my opinion is that, the fault wasn't from the CAP but the valve was faulty from some other cause.

I don't believe the forgotten-cap's scenario... it is my "right" that.

About the "funny" of story, also is my right to believe that the story is funny , because this scenario sounds very unusual. Nobody did not see the CAP, even if the Satellite passed 2 pedantic checklists before the lift-off ! ..... . Extremely strange that as the CAP was marked with a BIG, RBF flag !!!

Personally, I can not imagine a 5 million's Satellite to fly with a... forgotten cap ! It's a story for laughing.
(Are you ..."punishing" me also for my laughing? ....nothing about the "sense of humor" ?)

However, all these scenarios are just scenarios, speculations. Nobody was close enough to Satellite in order to be able ..... to take photos by using a camera. Thus it cannot be proved if the A, B or... "X" scenario is the real one.
All scenarios are open.

Therefore, any opinion is sustainable. Including mine.

The second point is about that I wrote, about "lies".

Definitely someone misunderstood here, I did *NOT* say somebody "liar" ! ! How could I to say that ?

I said that : " 5 million's dollars it's a very good reason for... lies!"

BTW, Al used a different phrase for the same matter on his Email (tks John for QSP).
He wrote:

" I'm sure we'll never be told the full facts".

So... If we don't know the "Full facts" we have not the "Truth". The opposite of the "truth" = "lie".

That exactly I was meaning. My thought was too simple ... and nothing more.

BTW Being Greek, the English-language is not my "forte", it is not my mother-language and I am self-taught in English. Many times I have to open the dictionary in order to find the right word. And many times the word that I can find it is not the best.
(Sorry about that... after the language-confusing-event that took place on the .... "Babel's Tower" , I can't do something better...)

Closing:
I would NOT like this Group to be a place for confrontation between the members. However I considered that some Emails were "over limits".

As the creator and one of the 3 moderators of this Group I would like to have a place in order to exchange not just a few technical infos about Amateur Satellites, but also our ideas, suggestions, opinions for similar matters. With no fear, no censorship. I would like this Group to be a "Free & Open" Reflector for any radio-amateur satellite operator, for any opinion about this Hobby.
But - on the other hand- by keeping the necessary *Respect*. The "Respect" to the different opinion.

In any case - please considered the matter resolved. But also please keep in mind the following significant phrase:

"Even if I disagree with your opinion, I fully support your human right to say your opinion".

That's the point.

If somebody on this Group disagrees with this principle , the "EXIT" is fully open .

Sorry again for your time....

Have a nice Sunday

73, Mak SV1BSX

1540. Fw: Delfi-C3 status update 18 May 13:00 UTC

Yahoo group: eu-amsat
Date: 2008-05-18 14:56:31 UTC
From: SV1BSX
Topic: 1540 Message: 1540

Sent: Sunday, May 18, 2008 5:14 PM
Subject: Delfi-C3 status update 18 May 13:00 UTC

Hi all,

Another status update on the Delfi-C3 satellite:

1. During the 10:40 UTC pass over the Delfi-C3 groundstation on Thursday 15th of May, the linear transponder was successfully tested and activated for a short time. The CW beacon was received well and subsequently good signals using SSB were received. An audio file of the test can be found at:

http://www.delfic3.nl/photoblog/wp-content/uploads/2008/05/pe4wj_transponder_test.mp3 2. We are currently performing tests while the spacecraft is over our groundstation in order to address the downlink dropout issue. Since we take it step by step, the satellite may still experience downlink dropouts over the coming days. 3. TLE's for object G match best at this moment, we are becoming more and more confident that G is in fact Delfi-C3. 4. Up to this date, we have received over 130000 AX.25 frames from all over the world, thank you very much for your efforts and observations so far! 5. Delfi-C3 has been given an OSCAR number by AMSAT, and is now Also Known As DO-64, which stands for Delfi-C3 OSCAR 64 or Dutch OSCAR 64. It is atrue honour for all team members to have Delfi-C3 join in the long tradition of OSCAR satellites. best 73, on behalf of the Delfi-C3 team, Wouter Jan Ubbels PE4WJ _____

Hello Simon

This would be the first launch from a submarine. But they have problems
with the Russian Defense Agency. Read more at http://www.amsatsa.org.za/

AS PROBABLY ALL THOSE WHO ALSO VOLUNTEERED THEIR TIME AND WHO WHERE INVOLVED. IF AS SOON AS A COMMENTING IS NOT IN LINE WITH THE ACTUAL
AMSAT-NA PHILOSOPHY IS INTERPRETED AS A NEGATIVE COMMENTING YOU'RE RIGHT WHEN YOU WROTE "Despite the negativism"

It is not perfect.no organization is. But if you
> look at our history, we have done some pretty darn amazing things for a
> volunteer organization---past and present.

HERE YOU RIGHT ON... It is not perfect.no organization is
HERE YOU NOT ENTIRELY RIGHT ALL IS OK MINUS..."and present." and the present mean the last +-5 years

>
> What I find sad are those on amsat-bb that constantly bash AMSAT-NA. They
> provide no help (money or time). And only THEY are right. Are we all that
> short sighted?? I hope not.

CLIENT...CUSTOMERS...USERS...OPERATORS... "SATISFACTION" IS THE KEY WORD HERE. I NEVER HEAR ANY SOUND EXPLANATIONS COMING FROM ANY AMSAT-
NA BOD OR OFFICERS IN YEARS REGARDING THE QUESTIONS AND COMMENTING ALWAYS THE USUAL COPY PASTE ANSWERS..." They provide no help (money or
time)" JUSTIFICATION THROUGH BLACKMALE: YOU DON'T WORK, YOU DON'T SEND MONEY? SHUT YOUR MOUTH AMSAT-NA KNOWS BEST...

"Are we all that short sighted?" I hope not." YES YES AND YES YOU PUT YOUR FINGER EXACTLY WHERE THE PROBLEM IS AND AS SOME ARE CHOOSING TO
VOTE WITH THEIR FEETS THEY RESCPECTFULY CHOOSE THIS ELEGANT FORM INSTEAD OF TELLING WHERE YOU SHOULD PUT THIS FINGER.

> 1) Money

WORK AS ONE INTERNATIONAL AMSAT PUT ONE FUNDING STRUCTURE FOR A REAL HEO SATELLITE, TAKE ONE PROJECT AT A TIME COMPLETE IT AND LAUNCH IT
AND GO FOR THE NEXT ONE

> 2) YOUR volunteer time

WHERE AND WHAT DO YOU NEED? DON'T THROW HOLLOW COMMENTING TELL THE CROWD WHAT EXACTLY IS MISSING THOSE WHO ARE AS YOU SAID "short sighted"
WILL BE AWARE OF YOUR NEEDS.

> 3) Some additional leaders to bring these projects to fruition.

YES YES AND AGAIN YES 2 IN 2 BUT THAT'S WHERE THE MAIN PROBLEM IS AMSAT-NA BECAME AND IS NOW A SENIOR SOCIAL CLUB. UNIVERSITY STUDENTS ARE
LAUNCHING SATELLITES AT A RATE NEVER EXPERIENCED BY AMSAT-NA "past and present" LOOK AT THEIR PROJECT EG:

MR BAUER AND AMSAT-NA BOD OFFICERS YOU ARE STUCK IN YOUR OWN INDIVIDUAL SELFISH AMATEUR SPACE PROJECT (PART OF THE AMSAT-NA PARADOX) YOU
DON'T LISTEN YOUR MEMBERSHIP YOU ASK FOR MONEY AND VOLUNTEERS JUST NOTE THAT STUDENT "THE KIDS" AREN'T TOO YOUNG FOR SATELLITES THE AMATEUR

RADIO SATELLITE FUTURE IS RIGHT THERE JUST UNDER YOUR EYES AND YOU ARE TOO SHORT SIGHTED OR STUPID TO EVEN TRY TO CHANGE THE AMSAT-NA
PHILOSOPHY.

INSTEAD OF LOOSING YOUR TIME BEHIND TABLES IN HAMFEST ASK YOU HUGE LIST OF AMSAT-NA COORDINATOR TO ENTER IN CONTACT WITH THEM AND ASK THEM
IF THEY CAN OFFER YOU SOME SUPPORT? IT'S A POSITIVE COMMENTING LETS SEE IF YOU CAN MAKE THE MOVE?

IF YOU STILL BELEIVE AMSAT-NA IS THE ONLY SPACE BUILDING AND LAUNCHING VOLUNTEER GROUP YOU'RE COMPLETELY WRONG. BUT SOME OF YOU ARE
SILENTLY STARTING TO UNDERSTAND IT1 THEY ARE NOW LOOKING TOWARDS COMMERCIAL INTEREST BEGGING FOR A RIDE AND A PLACE IN THEIR
LAUNCHER...SIGN OF THE TIME?

WITH NO TIME FRAME FOR THE NEXT HEO, WITH NO ACTUAL STATE OF COMPLETION, WITH NOTHING MORE TO ASK OTHER THAN MONEY IT WILL BE HARD TO
CONVINCE THOSE WHO WROTE THIS BELOW TO JOIN YOU:

Space (vehicle) engineering is a field where state of the art technologies are applied every day.
It is an exciting profession in which physical sciences, mathematics, and computers are combined in the design of space (vehicle) systems
and their components to achieve high performance with limited size and weight. The chair Space Systems Engineering (SSE) of the Faculty of
Aerospace Engineering (AE), TU-Delft, aims to educate future academic engineers in the field of space and spacecraft systems engineering.

....yes - works fine. The only problem with RASCAL is that, it's a bit
difficult to find & lock the centre frequency of receiving audio.
A good combination it's a 2nd program with a waterfall (like MixW),
which running together with RASCAL.

Thus you have a great hepl.

John,

the operation of FM voice satellites is a travesty for ham radio... I've been licensed for 57 years, on amateur satellites for 33 years (Oscar 7) and the FM voice operation is the most ridiculous aberration I've witnessed in all of amateur radio...
Pandemonium exists here also!! It is pretty obvious NO COMMUNICATION exists on AO51, all of their communication is on here.

Why do they bother to turn the radio on??? Many of us attended AMSAT a lot conventions in an attempt to discourage throwing that money "down the tubes" on FM voice, to no avail. Someone had an "ax to grind", and several of the existing "powers that be" in AMSAT-NA told me to "mind my own business".

They were obviously the "ax grinders". FM voice on the amateur satellites is about equal to the same degree of difficulty as a cell phone operation! No wonder our membership is deteriorating.

Ancient AO7 and present VO52 hopefully are keeping some interest, until Europe launches P3E.... That's where my donations go.....

Dave,

As one of those who was present at the "birth" of AO-51 (we called it "Echo" back then), I respectfully have todisagree with your assertions. I can assure you that nobody had an "ax to grind" in thatdecision. To the contrary, if you will recall, at that time wehad all but lost most of P3-D's on-orbit capabilities. Organizationally, our morale was very low.

What's more, the BOD and officers were presented with a unique cooperative venture that offered our membership a new LEO satellite, complete with launch, for a relatively small outlay of capital resources. Naturally, we jumped at the chance.
And, while FM operation may not be your particular "cup of tea" (and most of us operating there would MUCH prefer to have an HEO to play with), at least for the foreseeable future, an operational HEO on orbit is simply not in the cards. What's more, as Bob Bruninga has so eloquently pointed out, the FM - birds DO serve a purpose in creating excitement among the general Ham population as well as serving as the entry point into more serious satellite operation for those who choose to engage in satellite conversations that offer something more than just a quick "hello and goodbye".
As far as our declining AMSAT membership is concerned, while regrettable, I'm convinced this is simply just another reflection of the declining popularity of Amateur Radio in

general.

In case you hadn't noticed it, Dave, our Amateur Service is now, quite literally, dying. That's because our average age is approaching (and will soon surpass) age 60.

I learned long ago that it is far easier to tear a house down than it is to build one. And sitting on the sidelines and passing judgment on decisions that have LONG since been made serves no purpose other than to create bad feelings all around.

I'm sure the current officers and BOD members of all of our AMSAT organizations are doing their level best to get an HEO bird into orbit just as soon as they possibly can.

However, we all must remember this is 2008, not 1968. The "space biz" has fundamentally changed into a multi-billion dollar, multi-national, military-industrial grab-bag of commercial launch companies, complete with an ever more dizzying array of government-induced, bureaucratic restrictions and regulatory limits regarding who (and/or what) can put which payload into Earth orbit.

The bottom line here is that the days of "free" (or nearly free) and unencumbered satellite launches into Earth orbit are long since over. The sooner today's AMSAT members recognize and accept those fundamental changes that have occurred in a business that their predecessors in AMSAT largely helped create, the better off everyone will be.
And if operating on our FM birds continues to give you heartburn, then may I suggest you (and others so 'heartburned") simply not operate on them?

For those interested in DX.

I just worked Sergey UA0ZS again in Petropavlovsk Kamchatskiy on AO-7 (orbit 53384) in CW ... which beats the cr*p out of 599 and how's your father? ... on AO-51 (FM).

For the non-geographic orientated, Petropavlovsk Kamchatskiy province is immediately north of Japan.

You could spit !!! that far from North America (Alaska) ... but from Frei Island (Norway) it's a 'reasonable' distance for a LEO contact.

Yes, Russia is a "rather large" country.

(It's the biggest country in the world, you wanker.....GM1SXX).

Ok is possible to have right and is ok if you are a static fellow.
If you travell very much in special in mountains or wilde zones expeditions (without car, house, family, dog, cat etc.) where the cell phones are dead and you are depending on a simple baterry or a small solar panel you will know that fm LEO satellites are great. The real problem is the operators not the birds. Hi
Also that kind of problems are comun for HF bands and i think will be also for HEO... etc...

Hello Florian

I have read now the whole thread, here and on -BB. I come to the
conclusion, you are absolutely right.

We can only hope for a much better operating discipline on AO-51. And
that the "alligators" die out.

BTW if you hate FM-sats, you can here make a Mode suggestion:
http://www.amsat.org/amsat-new/echo/CTNews.php
The mode for PSK31 on 10m Uplink was never established and USB up /
FM down only a few times.

Call for papers. UNIVERSAT Space Symposium. Moscow,

Members of EU-Amsat, Amsat-UK, Amsat-NA and anyone else interested in Amateur radio satellites are cordially invited to submit papers on space related subjects - particularly cubesats in education - to The third International Symposium UNIVERSAT-2008, which is organised by the Skobeltsyn Institute Of Nuclear Physics, Lomonosov Moscow State University - which will take place on September the 1st to the 6th, 2008 at the Conference Halls of The Moscow State University Boarding Houses in Zvenigorod, Moscow Region, Russian Federation.

Details can be seen at <http://cosmos.msu.ru/universat2008/>

Papers and/or queries should be submitted to Alezander Zeitsev RW3DZ <zaitsev@...>

The deadline for papers is May the 31st but extensions may be possible.

This is an excellent forum for satellite interested individuals to take part in an international space symposium as well as discuss the possibility and prospects for future projects and launch opportunities.

On behalf of RW3DZ and the forthcoming space symposium ...

73 John. <la2qaa@...>

Homepage: <http://www.observations.biz>

This notice is submitted to EU-Amsat and the Amsat-bb.

It also appears on http://www.observations.biz

As funding is an issue trying to circumvent it without facing the problem will only add more delays. I keep hammering on the same nail
since AO-40 became silent.It's not a question of seeing "13 rail wagon passing by" as we already are on the side track stuck in the void.

Yes we are not builders
Yes we can add more personal funds

But at least we are operators the basic minimum could be? and yes we still can voices our opinions even if they don't please everyone.

Some university student ask for help here on this BB and they seems to get some but is it not logical for the AMSAT'S to developed
a kind of partnership with them? make US more visible. If we are focusing our "marketing campaign" only on our aging ham community i
honestly believe we are missing a lot in recruiting.

Adding new blood with new ideas is a part of the solution but are we open enough to make room for them?

I let the conclusion yours!

1561. Yubileiny: New Amateur Satellite ?!?

Yahoo group: eu-amsat
Date: 2008-05-24 17:11:39 UTC
From: SV1BSX
Topic: 1561 Message: 1561

Hi all,
according to various sources including Amsat-BB, a new "unknown" Russian Satellite which carrying
a Mode-J Transponder (145/435 MHz) is already on Earth orbit !

http://www.npopm.com/?cid=242

The footprint of this object is GREAT.. about the same or slightly higher than AO-7 !

RS-style CW telemetry on ~435.315 using callsign RS-30 has been reported by
W0RPK (Amsat-BB, unconfirmed info).

We don't know yet if the transponder is for public-Radio amateur use. However,
we hope for a 2nd ... unexpected gift, like HAMSAT (VO-52) !

"Stay tuned ~435.315" !

Have a nice weekend

73 de Mak, SV1BSX

Apparently, several people were surprised at the launch of the new Russian satellite.

Interested parties might like to check out "Observations From Russia" (you can't miss it) on the <http://www.observations,biz> website of
LA2QAA & GM1SXX.

NB.

GM1SXX does all the donkeywork - LA2QAA just sits back and takes all the credit.

Next time, click on Observations, before opening 'gob'.

The official Federal Space Agency site

http://www.npopm.com/?cid=news_ivent&nid=61

About the name "Yubileiny"

http://www.airspacemag.com/space-exploration/sputnik_creator.html

Mikhail Tikhonravov, one of the most puzzling figures in the Soviet space program. Although few Westerners have heard of him,
it is quite likely that without him, the Soviet Union would not have inaugurated the Space Age 50 years ago
Tikhonravov had lived and worked for many years in the Moscow suburb of*****Yubileiny*****.
For decades during the cold war, Yubileiny was a closed area.
The town was so secret it did not appear on any maps and few Muscovites even knew it existed.
It was the site of the most sensitive space organizations in the former Soviet Union.

In the FSA archive we can read about "International cooperation" Did someone speak about that lately!!!

http://www.npopm.com/?cid=23

45KG It's the equivalent mass of 45 Cube sats!!! What they put in this Box?
PUZZLE...SURPRISED!!! As usual the Russian style they build
silently they build long lasting vehicules even if they still use lighter fuel to propel them.

"There is those who speak and those who act"

Hello Folks,
Nice signals from UA0ZS Sergey in Petropavlovsk Kamchatskiy again this morning.

For those wishing to work Sergey please be aware, like me, he is plagued by high mountains and may 'disappear' in the middle of a QSO - (when the satellite is blocked by a mountain) - also like me, at times Sergey may be using knife-edge propagation - so please bear this in mind.

Hi John,
There are several "versions" doing the rounds ... according to Galina the 'correct' one is ... yeb-leen-ya ... there's a 'story' behind the name ... former rocket scientist etc ...

I'll post this on the EU-Amsat reflector then if Alex, Igor or Sergey care to correct me I'll beg forgiveness and right any wrongs.

Unlike English and many other foreign languages there are no "dialects" in Russian. They speak precisely the same way in Moscow and Vladivostock.

UA0ZS Sergey has been quite active lately from Kamchatskaiya (north of Japan). I'm sure you know what kind of strategic place that !! is (Pacific nuclear sub fleet).

Never been there myself but I have been to the non-existant air force base at ENGELS just across the Volga from SARATOV - (home of Yuri Gagarin).

My ex: wife is from Saratov so I had a "personal" guide. Her son was attached to the (doesn't exist) aircraft establishment in Saratov.

Not bad for an ex: NATO "squaddie" ... he he he he.

According to Galina, my Russian leaves *A LOT* to be desired.

73 John.

1569. Observations from Russia.

Yahoo group: eu-amsat
Date: 2008-05-25 10:19:38 UTC
From: John Hackett
Topic: 1569 Message: 1569

Privet my friends,
I have started a new folder on the 'Observations' website at <http://www.observations.biz> called OBSERVATIONS FROM RUSSIA.

The idea here is to share information pertaining to amateur satellites, other space related subjects and/or any other amateur radio interests, whatever they may be.

You do NOT !!! have to be an 'expert' or a professional writer to contribute ... all items, no matter how small, are welcome ... tell us about your equipment, what antennas are you using?, how is your location? ... (for instance Sergey UA0ZS is surrounded by mountains so operating satellites is not so easy) ... do you operate everyday? ... anything and everything is of interest ... (look at the other observations) ...what have you built lately?, is equipment easy or hard to get in Russia?.

If your English isn't perfect, don't worry !!! - my Russian is terrible ...
I can correct, edit and translate your contributions if necessary.

Please feel free to pass along this e-mail to your friends.

Your e-mail contributions are most welcome.

The idea is for sharing common interest information freely ... in the true spirit of amateur radio.

Have a good day my friends.

73 John. <la2qaa@...> EU-Amsat moderator.

From: SV1BSX
Topic: 1572 Message: 1572

Hi all,

I heard this afternoon YUBI'y on asceding orbit over E.Europe (14:30 Z).
Signals were 53-57 with just a 6 El Yagi horizontal polarized.

BTW the receiving signal remains to me the..... Woody - Woodpecker !!!
(if you put the Mode to USB.)

The signal was easily received during the whole pass @ 435.312,
without signifficant fading.
I observed also that the Doppler-drift was minimal - no significant for
USB, so I think the transmitting signal is probably FM.

I used an external MIC for the recording. In practice the audio was very
good.
I noticed that the transmittion following a tempo , about 60 sec "Woody", 4
sec pause, again 60 sec "Woody", 4 sec pause... etc etc.

A small audio sample is here:

From: John Hackett
Topic: 1572 Message: 1574

Dimitrios,
The Russian Jubilee satellite is *supposed* to sound like Sputnik - that's what it was designed for - to emulate and reproduce the sounds of space to celebrate Russia and the Soviet Union's 50 years in space.

It was supposed to be launched in 2006 but was delayed.

Mak, I think you'll find the "strange" sound is SSTV, you can decode it with MixW2 or MMTV. It also transmits APT - (automatic picture transmission) signals emulating the Russian weather satellites.

Packet is also represented.

The CW you obviously know about.

Don't forget, the satellite is being commanded from Plesetsk and Moscow and is still in a "testing" stage.

There is a lot of (incorrect) "guessing" and speculation on the Amsat-bb ... always the case when information is sparse.

I expect a proper schedule after the "tests" are complete.

Try FM Mak.

Interesting to note all the speculation on the Amsat-bb re: the various modes of the Russian JUBILEE satellite.

The Russians themselves have of course been asked to provide details, yes ?? ... err ... no, I didn't think so.

The NPO site states that JUBILEE was designed to emulate the various telemetry modes used from Sputnik to the present day in the Soviet, then later, Russian 50 years in space.

By definition this will obviously entail some early Soviet weather satellite telemetry/imagery - which would account for the (quote from one member) "strange FM noises" (unquote).

A well directed e-mail containing a polite request on behalf of Amsat-NA would probably do a *LOT* more to assertain operating schedule details and modes - than the sometimes frivolous guesses being bandied about ... however ... I expect those concerned are having a good laugh about it.

Points to ponder.

The satellite was to be launched in 2006 but was delayed due to lack of funding.

It's highly unlikely that a transponder was included in a package designed to emulate the sounds from space ... but you never know ... stranger things have happened at sea.

It's interesting to note that The Russians in fact do go to a useful orbit.

Did anyone think to ask the Chinese to include a transponder on their "Olympic" satellite ?? ... but maybe there were too many political potatoes involved.

From: pcalvi@bluewin.ch
Topic: 1578 Message: 1578

Honestly, if somebody has put a 45 kg amateur satellite into a 1,500 km plus orbit and has NOT included a transponder,
then this hobby has really become a joke! What's the weight of a transponder module? And the cost? What's the problem
in giving us something more like a "real" satellite? (and this is said with enormous love and affection for the old
girl - which I use daily - and plenty of respect for HamSat).

Yes - I am quite angry. We are kept in complete darkness as to real progress and launch opportunities for P3E -
something I have repeatedly and completely uselessly complained about several times on this BB. I find this absolutely
incredible. I have repeatedly said that I have the utmost respect for the work of AMSAT DL and I am quite keen to
support it financially, bit I cannot see any reason for this total blackout on communication, which has been going on
since the beginning of the project. I appreciate that AMSAT DL themselves must be quite uncertain, but the DO TELL US,
for God's sake! Keep us informed on negotiations, progress, prospects. That fuels enthusiasm, attracts resources and
somewhat cures frustration. We live on tiny bits of information - mostly speculations and rumours. How is this
possible?

And now, talking about frustration, somebody invest considerable resources to put a new bird in orbit and do not
include a transponder? Tell me that's not true, PLEASE.

1579. my Fears as a new Oscar satellites fun

Yahoo group: eu-amsat
Date: 2008-05-28 12:48:00 UTC
From: SW1JGW
Topic: 1579 Message: 1579

Dear Friends Good Afternoon,

I have been working on Satellites since December 2007, so you can say that I am a beginner on this hobby.

That is why I don't write a lot in this forum. I prefer listen or read rather than writing.

AO51 was a good satellite for the beginning, because of its commodity to do QSO's.

But you must admit that AO51 has a chaotic traffic, that is why now I like better AO7 .

As you know there are three FM Satellites. One of them is working very well (AO51), the other two may be die soon I think.

On the other hand there are two SSB sats . Maybe three after DelfiC3.

The main problem is that A07 is old.

Did you ever think what will happen in 3-4 years?

Did you ever think the possibility not to have any satellite at all?

I think that it is time to send a good HEO satellite or two... with the style of AO7 which can work without batteries,.

Simple Flexible and stabilized.. Else the Oscar satellite era will come to its end.

These are my fears my friends!!
AM SAT DL or Amsat NA must give it a very good thought

Because without Satellites

they won't have any purpose of existence

Hi Piero,

I completely agree with your post about P3E. And I am glad because there are many Hams which are pondering about this matter.

However, about Yubileiny we must be patient for a couple of days or weeks.

If there is NO any HAM-transponder onboard, then you have again 100% right. And I subscribe your thought.

If this scenario is real, I wondering also why they use our frequencies (145/435), especially the 145 MHz "Satellite segment" as UPLINK, if the Satellite does not carry any HAm-radio equipment ! It it that legally ?

Now, in case which the YUBI is carrying a ham-transponder but we don't know that
this moment, Hhmmm... NO surprise... it's a usual mysticism-procedure on Russians.

Crossed the fingers to be real the last one, even if it has a lot of *suspense* !

Subject: [eu-amsat] JUBILEE

Honestly, if somebody has put a 45 kg amateur satellite into a 1,500 km plus orbit and has NOT included a transponder,
then this hobby has really become a joke! What's the weight of a transponder module? And the cost? What's the problem
in giving us something more like a "real" satellite? (and this is said with enormous love and affection for the old
girl - which I use daily - and plenty of respect for HamSat).

Yes - I am quite angry. We are kept in complete darkness as to real progress and launch opportunities for P3E -
something I have repeatedly and completely uselessly complained about several times on this BB. I find this absolutely
incredible. I have repeatedly said that I have the utmost respect for the work of AMSAT DL and I am quite keen to

support it financially, bit I cannot see any reason for this total blackout on communication, which has been going on
since the beginning of the project. I appreciate that AMSAT DL themselves must be quite uncertain, but the DO TELL US,
for God's sake! Keep us informed on negotiations, progress, prospects. That fuels enthusiasm, attracts resources and
somewhat cures frustration. We live on tiny bits of information - mostly speculations and rumours. How is this
possible?

And now, talking about frustration, somebody invest considerable resources to put a new bird in orbit and do not
include a transponder? Tell me that's not true, PLEASE.

Objet: [eu-amsat] Speculation.

Interesting to note all the speculation on the Amsat-bb re: the various modes of the Russian JUBILEE satellite.

The Russians themselves have of course been asked to provide details, yes ??
.... err ... no, I didn't think so.

The NPO site states that JUBILEE was designed to emulate the various telemetry modes used from Sputnik to the present
day in the Soviet, then later, Russian 50 years in space.

By definition this will obviously entail some early Soviet weather satellite telemetry/imagery - which would account
for the (quote from one member) "strange FM noises" (unquote).

A well directed e-mail containing a polite request on behalf of Amsat-NA would probably do a *LOT* more to assertain
operating schedule details and modes - than the sometimes frivolous guesses being bandied about ... however ... I
expect those concerned are having a good laugh about it.

Points to ponder.

The satellite was to be launched in 2006 but was delayed due to lack of funding.

It's highly unlikely that a transponder was included in a package designed
to emulate the sounds from space ... but
you never know ... stranger things have happened at sea.

It's interesting to note that The Russians in fact do go to a useful orbit.

Did anyone think to ask the Chinese to include a transponder on their
"Olympic" satellite ?? ... but maybe there were
too many political potatoes involved.

1581. Yubileiny... some facts.

Yahoo group: eu-amsat
Date: 2008-05-28 14:58:07 UTC
From: Allan Copland
Topic: 1581 Message: 1581

Hi Folks.

I notice there's a great deal of speculation about the new Russian Yubileiny (Jubilee) satellite. A fair amount of speculation is to be found on the AMSAT-BB but factual information has been available some some time on the webite of the builders of this bird, the Reshetnev Bureau. http://www.npopm.com/

The main problem with that data is that the pages have not been indexed for the web-bots so it can be a slog to find stuff.

I've put together everything I know about this bird to date on 'Observations From Russia'.

http://www.observations.biz/Observations_from_Russia/yub_intro.htm

and
http://www.observations.biz/Observations_from_Russia/index.htm

This includes what was obviously a general release or press statement, originally published in PDF but now copied to HTML format.

This describes the bird's mission snd history and also a non-technical account of the data transmitted. The data are transmitted over a four minute cycle but will almost certainly be interrupted when the bird is in range of the command station(Moscow area).

Yubileiny is a technology demonstrator satellite first and foremost. Like many others operating in the amateur radio satellite bands, it's a downlink only bird, essentially a manufacturer's test satellite, but making use of the amateur bands for command and downlink.

You can find a copy of the 'press kit' at..
http://www.observations.biz/Observations_from_Russia/yub_intro.htm

If it proves to be a success, the 'Yubileiny satellite bus' will probably re-surface in future for future Russian light-LEO missions.

Obvious candidates for future missions of this new satellite structure include the LEO store-dump military comms system that formerly used the small Strela (Arrow) satellite bus.

From: Allan Copland
Topic: 1582 Message: 1582

Hi,

In answer to the question of whether there is a transponder is on board Yubileiny, it seems highly unlikely. Although the bird signs RS30, there is no mention in any of the data I've located to date, of anything other than the equipment noted in the press release being on board, so it seems the answer is no... no transponder.

Thats a huge disappointment to me.

That is of course unless the Russians have an ace hidden up their sleeves. My personal best guess? No transponder.

If this turns out to be the case, it would be a huge disappointment to radio amateurs worldwide because Yubileiny is in an ideal orbit for a linear transponder bird.

The problem here "the satellite operator request are not heard" as in AMSAT-NA their reprensatative structure remain in the hand's of few
board of directors. They have a list of regional coordinators with no power. It is not a very democratic organisation.

SOLUTION

Give more power to the membership through their regional coordinator who can vote on the main orientations and goals

> Yes - I am quite angry. We are kept in complete darkness as to real progress and launch opportunities for P3E -
> something I have repeatedly and completely uselessly complained about several times on this BB.

EXACTLY and well said keeping decisions in close circle make the information flow very restricted. Why there is so few information given is
very easy to understand! There is no news to be given "Project are stuck" lack of funding? lack of launch opportunity? no reporting
structure on the state of completion of project?

> And now, talking about frustration, somebody invest considerable resources to put a new bird in orbit and do not

>
> 73. Piero

As any international business each group have their own agenda even AMSAT-NA and AMSAT-DL sign an agreement but it was not respected by at
least AMSAT-NA (This is not a big surprised) Its hard to understand but in the present Russian "Yubileiny" satellite there is so few detail
available that it is hard to get a clear idea of the whole satellite functions. It is a joint venture with commercial payload? amateur only
stuff? we really don't know.

What we have to do as good stage coach is to waive our little flags where dollar and euros sign are painted on them. And waiting the team
to score...We are the new satellite Cheerleaders without mini skirt :)

In a way to help some waiting there is at least some site to view
http://www.cheerleader.com/ ;)

Dear SW1JGW,
I agree with your comments.

If you look at <http://www.observations.biz> Observations from Norway and Observations from Scotland you'll see that GM1SXX and myself (LA2QAA) have been promoting the idea of battery-less satellites for many years now.

AO-7.

Don't forget AO-7 has been in space for over 31 years !!!! now and been operating for 14 years in that time ... and will probably operate for quite some time to come ... providing the high power clowns stop hitting it with too much power.

Jubilee ... don't forget that's a "me too" satellite.

It's too late now to start complaining about giving away the amateur satellite segement of the band.

We *WERE* !!! warned 15 years ago by Commander John Brannegan GM4IJH ... and again by GM1SXX & LA2QAA - regularly over the last 10 years. (See OBSERVATIONS).

Subject: [eu-amsat] my Fears as a new Oscar satellites fun

Dear Friends Good Afternoon,

I have been working on Satellites since December 2007, so you can say

that I am a beginner on this hobby.

That is why I don't write a lot in this forum. I prefer listen or

read rather than writing.

AO51 was a good satellite for the beginning, because of its commodity

to do QSO's.

But you must admit that AO51 has a chaotic traffic, that is why now I

like better AO7 .

As you know there are three FM Satellites. One of them is working

very well (AO51), the other two may be die soon I think.

On the other hand there are two SSB sats . Maybe three after DelfiC3.

The main problem is that A07 is old.

Did you ever think what will happen in 3-4 years?

Did you ever think the possibility not to have any satellite at all?

I think that it is time to send a good HEO satellite or two... with

the style of AO7 which can work without batteries,.

Simple Flexible and stabilized.. Else the Oscar satellite era will

come to its end.

These are my fears my friends!!

AM SAT DL or Amsat NA must give it a very good thought

Because without Satellites

they won't have any purpose of existence

73 Sw1jgw

Hi Dimitris, SW1JGW

about that you wrote:

> I think that it is time to send a good HEO satellite or two... with
> the style of AO7 which can work without batteries.

...well, a very interesting/informative message has been posted from the current President of AMSAT-DL which answers about the possibility of a HEO without batteries:

Peter Guelzow wrote:

<snip>
AO-40 would not work just from solar power and without batteries.
The battery works as big capacitor for the transponders. In mean, the
power budget would be positive, but during high peak on the transponder
due to load, the transponder would drain current from the battery as the
peak power would not be sufficient for the generated power from the
solar cells. Without the battery, the transponder would be very
unstable as the voltage breaks down. And even worse, the voltage break
down would cause the IHU (onboard computer) to make a power down reset.
So we could probably only have telemetry beacon, nothing else...
During each eclipse pass, sometimes every orbit, the computer would also
reset again and again.
Since all the software must be reloaded from ground, this is a task we
could not provide every day.
But without computer, we would quickly loose orientation of the
spacecraft and thus, the solar panelsl would quickly point away from the
sun.. and that's is it..
Look at AO-10 to understand what I mean..
AO-40 was never designed to work without battery and this would also
make totally no sense..
<snip>

73s Peter

<snip>

...now you know why it's impossible a HEO without batteries... Unfortunatelly !

Mak, Dimitris,
Maybe now you can see why GM1SXX and myself have been batting for a batteryless satellite in a MEO or even a 1400km + orbit ... look at the JUBILEE footprint.

We've been stating this for a *LONG* !!! time ... unfortunately, the people who *could* make a difference have *NOT* been listening to the members ... (nothing new in Amsat protocol)

As for university sats and now commercial sats ... JUBILEE and the forthcoming Chinese OLYMPIC sat ... hijacking the amateur frequencies ... it's a meagre consolation saying - we told !!! you so.

GM4IHJ said it would happen - it has.

Hi Al,

nice to read your posts again here !

Ho ho ho... .. YES! "Woody" was on TV, right. Great fun !

I said that about YUBI just because the 60 secs period
signal from YUBI remembers to me the "knock-knock-knock"
of Woodpecker onto the trees ! (trying to make the hole!) Fun !

BTW I read that the YUBI send SSTV signals for about 60 secs.
I have recorded this one before 2-3 days and I noticed that:

if you try to transmit an SSTV signal on MARTIN2 format, WITHOUT picture -
just
a BLACK-screen, the speaker-output has a very similar "audio"
("knock-knock-knock")
with that which the YUBI sends for 60 seconds period.

I tried also to decode this recorded signal...

I can see a nice... BLACK-screen on my monitor.

Coincidence ? may be...

Simple, flexible and stabilised are things that *can* be achieved....
in Low Earth orbit. To that you can add a very long life expectancy if
you dispense with a battery based power system, keep complexity to a
minimum and settle for daylight-only operation. Battery problems have
prematurely ended many satellite missions, and not just with amateur
birds.

As Mak has pointed out, a satellite in a Molniya (high elliptical)
orbit requires a battery for at least houskeeping purposes. This is
primarily because the solar generators must collect sunlight while the
antenna system simultaneously points Earthwards. Without power for the
onboard computer, and electromagnetic orientation system
(magnetorquers), it can't maintain it's attitude in space for very
long and would soon be lost. You also have to consider that a
satellite in High Earth Orbit needs more power for it's radio link
than one in a lower orbit. You can be in a situation where the
batteries or the panels alone don't supply enough energy for the
transponders and other systems. Conditions soon become complicated!

A Linear-Transponder satellite in a lower circular orbit can benefit
from using a low-gain antenna system and a far simpler Earth pointing
system.
The pointing system can be as simple as some powerful bar magnets to
align the bird with the Earth's magnetic field, or in the case of a
more complex satellite, gravity-gradient boom or electro-magnetic
torquers (electric motor effect). Painting opposite sides of the
antenna elements can be used to impart a slow spin to the satellite
using sunlight... Crookes Radiometer principle. This is proven
old-technology. Simple bar-magnet stabilisation has been used in the
past to good effect (AO7 uses this), and so the design and demands
made of a satellite in low Earth orbit, are greatly relaxed compared
to a HEO bird. Far better bar magnets are now available than those
used in early amateur satellites.
Add to this the need for far less power for the transponder(s) and the
concept of a long-lived *simple* batteryless LEO is a project that is
feasible. Not one to please the builder or movers and shakers, but
I'd bet the users would like it!

For the satellite builder who may read this message, AO7 and more recently Delfi-C3 are showing the way. Batteryless operation is not only possible. It's now proven technology. It is not appropriate for some missions but it can be done and as AO7 has proved, the lack of a functioning battery can be a blessing.

When AO7 came back to life, LA2QAA and myself collected and analysed the telemetry from the bird. Bearing in mind that the solar generators are/were severely degraded by radiation damage, so available power was severely curtailed, we were pleasantly surprised to find most of the telemetry values were reasonable for valid 'frames' received.... those ending in 649,650 or 651.

For anyone who is not familiar with AO7 telemetry, the last three digits are the D/A reference voltage. Data frames ending 649,650 or651 show proper operation of the D/A. The data from AO7 opened our eyes to the fact that satellite hardware can survive for very extended periods in a high-radiation environment.

While the builder and designers of amateur radio satellites are looking for ever greater challenges from a technical point of view, this approach does not often best serve the needs of the satellite users who frequently want simplicity and reliability at the top of *their* wish list. AO7 is an incredibly crude and simple satellite by today's standards.

Sometimes, simplicity pays off handsomely.

Kind regards,
Al.

I think the best satellite in history was Oscar13 and is not only my opinion, also simple and longlive.
Dimitrios have wright, maby it will be better to buid one simple and fully functional instead a ,,three in one" with a lot of transporders, sofisticated systems and frequencies accesible only for few.
Frequencyes transporder is also a problem, using 2m- 70cm and 23cm is easy accesible for everyone, more up like 2.4G.... 24G will create a hard acces satellite for most of us.

Hello Simon

It does. I have an old rig and wrote my own tracking software with
CAT for a Kenwood TS-711E and a scanner Icom IC-R7000. If an OM also
has a scanner as 2nd radio, it makes sense.

Thanks - best to know the required scope before starting.

Assuming I ever have enough money I would probably use 2 x IC-703 to drive
13 cms / 23 cms transverters - it's just easier if the software exists :-)

Hi,

You could use a Icom 703's but the old FT290 (Mark 1 model) makes an excellent (2m) transverter driver.

If you can interface to the tuning system (via the up/down buttons on the MIC jack) for Doppler tracking, using cheap opto-couplers, the 290 makes a great transverter driver. That's why at one point, I had three FT290 MK1's in service. 703's are expensive. 290's are cheap!

The old Mk1 makes a better driver than the Mk2 because it places a DC switching voltage on the antenna output jack. This current-limited line can be used to 'hard switch' your transverter. I hope thats of help to you.

..yes Simon, it's highly recommended that !

I am using also "split" radios and as I know several other operators.

On the other hand, don't forget that some manufactures have produced separate radios for VHF-UHF Bands
like ICOM (ie IC-271 & IC-275 for VHF and IC-471 & IC-475 for UHF).

Another matter is that, the majority of "OLD" radios are without
COM-port. A mere example is the excellent pair by Kenwood, TR-751 & TR-851. They are "Super"
transceivers even if they are small Mobile-radios, and I think both are superiors as RX-TX from several newer
"BASE" rigs. Without "Bells & whistles", but they are excellent radios. "State of the Art" !

Well, the main problem with these radios is the "Auto-Doppler" correction. Only the InstantTrack can
correct the frequency by using the "Up-Down" buttons of Microphone. It would be a great benefit
for your program if it has a similar ability.
Many of us (especially the Homebrewers) we also use similar OLD radios as IF for Higher Bands, together
with a Transverter or DownConverter. I remember my faithful FT-290 behind of 2.4 GHz DownConverter for
AO-40's receiving.

So, I repeat - it would be GREAT advantage if a modern Windows-program can manage similar OLD radios.
Unique !

As part of some new software I am thinking about a scenario where two radios are used - one for TX, one for RX.

For example 3 x IC-703 using transverters for 13cms and 23cms.

Does this happen in practice?

Definitely, Simon!

I am currently using "big" (IC775) HF rigs with transverters, and I could certainly do with automatic tuning and
doppler correction.

Thanks and 73

For anyone interested.

I have full doppler tuning and automatic tracking.

What's special about that you ask ?? ... just the fact that I'm using 22 year old rigs that *DON'T* have a com port.

NOVA for the graphical tracking ... InstantTRACK for the aerial tracking and InstantTUNE for ther auto doppler correction.

This system requires you to do a bit of homebrew - (interfaces).

The FT-290/790 pair only produce power in the milliwatt range on the low power setting so I use a converted mobile phone base station that "fell off the back of a passing lorry". This gives me a
transmitter power on 70cm with a GIGANTIC !!! 25w EIRP .

(I have the cards to prove plenty of DX on FO-20, AO-13 and AO-7).

However, "auto" is ... boring ... boring ... boring ... so I usually turn the ancilliary equipment off to track and tune manually ... it makes life more interesting with the brain in the *ON* position.

Hello Al,
Today's pic while walking to the shop - (6km there & back).

The main road just before the Bolgaveien turn-off - about 2 Km from the flat - (My flat is nearer the mountain).

Theview only shows the LOWER edges of FREIKOLLEN. The higher ridges -which I use for KNIFE-EDGE PROPAGATION mode on AO-7 are off to the left of thepicture.

I 'chucked' this onto the reflector (CC'd) to give thepunters in the 'low' countries - (Hi Aldert) - an idea of how it is tooperate from a mountainous area.

UA0ZS, SV1BSX and the HB gang are of course already aware of the idiosyncrasies.

Hi,

I'm not sure if you mean that the satellite itself was simple or that
operating it was simple.

The AO10 and AO13 satellites were complex machines as any Heo bird has
to be.
HEO birds, and that has really been Molyiya's (Lightning.. Russian) to
date *must* carry a complex orientation system, and that means an
onboard computer. Carrying a computer into such high orbits carries
with it the risk or temporary, or even permanent damage from solar and
cosmic radiation as the satellite traverses the Van-Allen radiation
belts. Some things can be done to help protect the computer such as
bonding protective Tantalum, or other absorptive covers to the chips
(rad-hardening)and enclosing the flight computer in a (relatively)
heavily 'radiation screened' module box but the risk of permanent
damage will be ever-present. Stopping radiation from being able to
damage the electronics is not possible.

Of course, if you mean that AO13 was simple to operate, thats a
different thing :-)

My personal view is that the early Russian RS series of birds offered
the most fun and 'bang for the buck'. These simple linear transponder
LEO birds carried superbly sensitive transponders and with no
'alligators' around could be worked with very low power.

The early RS Satellites were launched as a cluster into fairly high
circular high orbits that made them a lot of fun. Unfortunately, bad
operating practices (alligators.... all mouth, no ears), particularly
in Europe led to the early demise of the first batch of RS birds. RS7
soldiered along for quite a while providing a great deal of fun for
myself and others.

These were simple satellites built around discarded military 'Strela'
space-frames and flown as piggyback 'passengers' on a Russian
launcher. They were a great deal of fun for me.

Hi Folks,

Luc makes the very valid point that we will have a long wait for a HEO. This is the very reason that many people, myself included would like a linear LEO in a half-decent orbit. The launch of Jubilee into such an ideal orbit but apparently without any sort of transponder on board has focused members on the need for a new replacement linear LEO bird that could take over from the ailing AO7.

Heo birds take a lot of time, money and effort to build and they also need to be maintained in orbit, over their lifetime, and in particular the attitude pointing.

By contrast, Linear LEO birds can be fairly simple, uncomplicated, relatively cheap, very long-lived (if you discard the battery), and immensely useful to end users, provided they are placed in a high enough orbit.

Ditch the battery and any sort of onboard computer and you won't even need a command station... except to disable the transponder at the end of it's active life. This is not an idea thats likely to find favour with the satellite builders (not enough of a challenge) but it would be of immense benefit to satellite users.

Some people will be horrified at the concept of a daylight only satellite but take a look at the history of amateur radio satellites and you'll see why this idea has merit. A simple batteryless linear LEO doesn't *need* a computer. Consider for a minute AO7. No battery and no computer. Thats the most likely explanation as to why it's currently 'semi-operational'.

Degradation of the solar arrays by intense radiation is probably the biggest issue with AO7. Modern coatings and nitriding would offer a replacement bird a longer lifespan than AO7 has currently enjoyed.

Words are cheap and life is short. P3E will not be launched any time soon, but a linear LEO in a decent orbit is something that probably CAN be done in a short timescale. I'd never suggest that funding should be diverted from P3E to help pay for such a program, but surely a Linear LEO would be of far more interest to the paying membership than some of the other 'diversions' in recent years.

Hello Al,

Jubileiny/Jubilee and errors in translation.

This one brought to you curtesy of the Signals - (aka, a later La2qaa - from the 6 day (Arab/Israeli) war in 1968.

Message as written (CW) on the message pad

"Send reinforcements we're going to advance"

Message as received (CW) under the original.

"Send three and fourpence, we're going to a dance".

It should be noted - this was a result of 'boredon' while waiting for the diplomats to get off their collective 'bums' and actually *DO* something.

It also shows typical Brit humour in the face of adversity. Good for morale and all that jazz.

73 John. <la2qaa@...>

Re: 'Jubilee' speculation.

I have been advocating a 'wait and see' attitude for quite some time, unfortunately, few appear to be listening.

Proposed contact with Amsat-ru - EU-Amsat.

I mentioned this in a post on this bb *BEFORE* Jubilee became an issue. I have been in personal communication with Amsat-ru for quite some time ... since I mentioned it on the bb ... *NOBODY* west of the UK has shown the slightest interest whatsoever.

Attached is a letter from Alex Zaitsev informing me about the launch of Jubilee - please note the date - December 2007.

I agree also with Luc, that we, I mean ALL AMSAT-organisations worldwide, concentrate our resources like money and manpower to ONE HEO-project. Is one project successfully completed and in orbit, we can go to the next one. The time to build satellites in garages and launch it free of charge is long long over. In the meantime Universities can build their CubeSats.

OK, we have now a Linear LEO in orbit, DO-64 (Delfi-C3). Lets wait
about 2 month and we will see if and how it will work.

Next projects with a lineartransponder are:

KiwiSat from AMSAT-ZL, see http://www.kiwisat.org.nz/

CAS-1 from CAMSAT (AMSAT China), see
http://www.amsat.org.uk/iaru/formal_detail.asp?serial=108 and
http://www.southgatearc.org/news/october2007/chinese_amateur_radio_satellite.htm

SSETI-ESEO from AMSAT-UK, see
Info-1
<http://www.sseti.net/index.php?option=com_content&task=category§ionid=22&id=37&Itemid=91>
Info-2 <http://www.esa.int/esaED/SEM29W9ATME_highereducation_0.html>

Artikel-3 <http://www.uk.amsat.org/content/view/643/68/> (I hope this
links works)

SATEDU from AMSAT-France, see http://www.amsat-france.org/satedu/

As you can see, there is no reason to whine for such a satellite.
The business to put a satellite into orbit is very hard and expensiv.
I applaud to every AMSAT-group for their courage to put a satellite
into space for our hobby.

Hi Thomas, and the group.

I based my perceived need for a new LEO satellite around the data
published by the IARU satellite Frequency Co-ordinating pages where
you will see considerably fewer birds listed than on Thomas's list.

http://www.amsat.org.uk/iaru/

Of the birds in the frequency co-ordination process, most are
CUBESATS
or University 'me-too' downlink-only birds with no transponders and
as
such, of little use to radio amateurs seeking to actually *use*
satellites for communication, or more specifically, as I stated
earlier, linear transponder satellites.

Only a few of the satellites listed as 'in process' actually appear
to
carry any sort of transponders. I'm being a realist
here..a 'prospective satellite' on a long paper list is not the same
as one thats actually close to being a reality.

re your other suggestion...

>I agree also with Luc, that we, I mean ALL AMSAT-organisations
worldwide, concentrate our resources like money and manpower to ONE
HEO-project.

Well, isn't that the case anyway? LEO birds and HEO birds are very
different things and have to be treated as separate entities.
In *relative* terms, LEO's are cheap and HEO's are expensive.
They tend to be funded separately anyway.

You have not said anything that has changed my opinion.

Kind Regards,
Al.

Hello Thomas,
My mail was primarily aimed at the Amsat-bb (but CC'd to the EU-Amsat group). Specifically, it was directed to the two gentlemen who suggested Amsat-NA make contact with Amsat-ru.

IMHO ... (my personal !!! opinion) ... Amsat-NA would never instigate a personal collaberation with Amsat-ru ... political issues would probably cloud any attempted debate.

I just wanted to let the gentleman concerned know that the satellite world does *NOT* start and end at the boundaries of The USA and it's allies ... In fact, several satellites have absolutely *NOTHING* to do with the USA ... even though they take it upon themselves to give them an Oscar number. This is *NOT* mandatory.

Al, GM1SXX has IMHO correctly stated that Jubilee is exactly !!! the same as the first Uosat satellite ... store and dump. That particular satellite also !!! used frequencies in the amateur satellite band.

Commander John Brannegan G4IHJ forwarned about this type of proceedure so it's nothing new like several of the Amsat-bb punters seem to think.

I attempt to keep EU-Amsat "up to date".

Well Thomas, should you re-read my original posting, (Fri May 30, 2008) you may realise I was not 'whining' for such a satellite, but pointing out the blindingly obvious, but uncomfortable for some, fact that batteries, complexity and the dependence on onboard computers are the main reason that that *communications* satellites, both commercial and amateur, have short life expectancies.

LEO amateur communications satellites don't actually need computers, great complexity or batteries to operate reliably, at least in sunlight.

For those may not be aware, AO7 was launched with an already compromised battery... a 'space agency' cast-off that had already accumulated many cycles under test, that first failed in orbit in a short-circuit state, as most Ni-Cd batteries eventually do, only to go open-circuit many years later.

The battery failing open-circuit effectively removed the itself from service thus allowing the satellite to again work when in sunlight.

AO7 has proved beyond any reasonable doubt that simple but robust technology, a simple hard-wired command system and the transponder(s) can survive for a 'very long time' in a harsh radiation environment. AO7 is presently limited more by it's degraded power generation capability than anything else. Hardly unexpected given the severe radiation dose the solar generators have accumulated over it's 30+ years in orbit.

Delfi-c3 while a very interesting satellite, batteryless, and carrying a linear transponder, despite being a 'triple CUBESAT' has a rather meagre power generation ability to support a good linear transponder. Even a triple CUBESAT is a bit too small for this job. The linear transponder clearly does work, as has been demonstrated under test recently but my personal feeling is that a more sizeable battery-less bird (perhaps an eight inch cube) placed in an AO7 type orbit should be able to provide at least 20 years of good continuous service as a 'sunlight sat' with a decent downlink signal strength and sizeable footprint. The 'alligator' problem would cease to be a big issue... no battery to run down!

Such a 'minimalist' satellite, missing an IHU, battery, etc, could only be a cheaper option than any alternatives short of CUBESATS, heck, it would probably BE cheaper than a CUBESAT to manufacture.

Not only that, but it would offer the longest transponder life possible. Boring as hell for the builders, but very exciting for the users.

If I was 'whining' about anything, thats what I was whining about.

A radical approach to longevity. Of course, perhaps there's no call for long-lived semi-autonomous linear transponders in really useful orbits. Yes, it's a compromise, like most things in life, but I think it's an attractive one with real merit, especially for cash and launch opportunity strapped AMSAT groups. You just have to say it very slowly until it doesn't hurt so much ' n o b a t t e r y & n o I H U'. Attaboy!

The upside of this concept is very attractive indeed once you can get over the initial pain.

Kind Regards,
Al.

No, it isn't. AMSAT-DL is building P3E and have nearly finished it. AMSAT-NA will build Eagle and transponders for an Intelsat (P4). That needs extra money and manpower. From Eagle I have seen nothing yet and about "P4-light" only flaming discussions on the AMSAT-BB.

> LEO birds and HEO birds are very
> different things and have to be treated as separate entities.

Thats right. To fund CubeSats with its own launch is no problem as we all can see. An other possibility is to build a transponder and ride it piggypack.
But a HEO-satellite needs the support from *all* AMSAT-organisations at the same time. Otherwise the satellite stays on the ground.

I want not change your opinion dear Allan. I have "underlined" your opinion with mine for other readers in this group. Except that for "Linear LEOs".

With all sorts of satellites (except a HEO) we have a wonderfull hobby. Its annoying for me after 22 years of satellite-operation to read always the whining mails, Sorry. I'm happy with every new satellite in orbit and will observe Yubileiny with special interest over the weekend. And also interesting
mails about it.

Who's whining?

If by DO-64 you mean Delfi-C3...I prefer real names to numbers... I'm happy for the builders and the users.
I've always has a positive attitude to Delfi-C3. I've said so in my web pages several times in the past.
Hey.. I'm delighted for the Delfi team AND the prospective LINEAR transponder users.

Whining how?

> No, it isn't. AMSAT-DL is building P3E and have nearly finished it. AMSAT-NA

I rarely read the BB. It's populated by a large percentage of people who can *only* see the AMSAT approved way of thinking. Any original thought is immediately flamed. IMHO not a healthy environment for anyone, so I generally avoid it.

Of course HEO's are not the same as LEOs with regard to funding. I stated so clearly in my original posting.
P3E is not being funded by one country, no HEO *ever* has been, so what is your complaint?

I personally strongly disagreed with the concept and execution of P3D but I still did all I could to help fund it. To this day I still believe it was lousy concept. I imagine you will probably find fault with this personal view also.

> Thats right. To fund CubeSats with its own launch is no problem as we all
> can see. An other possibility is to build a transponder and ride it
> piggypack.

Well CUBESAT's are usually funded by the taxpayer. They are mostly 'educational' ..'amateur radio'.. 'downlink only' short-lived satellites. Education... now, where would the money come from to pay for education? I work in the education business... and it *is* a business... paid for mainly from taxation with a little funding from commercial ventures.

> But a HEO-satellite needs the support from *all* AMSAT-organisations at the
> same time. Otherwise the satellite stays on the ground.

So what's new there? They do get international support. Always have done.

There is one trend in Amateur satellites thats gaining in ppularity... not a new idea.. it's been around a long time.
This is targeted donation.
Because some AMSAT organisations fund projects that many members consider to be not in their best interest, some people (myself included) now target donations directly to projects they support. AMSAT will suffer as an organisation if they don't listen to the wishes of their members. When were you last asked for *your* opinion by AMSAT?

Regards,
Al.

From: John Hackett
Topic: 1612 Message: 1623

Gentlemen,
I believe the bone of contention is the word "whining" ... which in this context is equivalent to the 'American' *BITCHING*.

A word that is far !!! too strong to describe the various opinions put forward on this reflector.

A review of past messages will turn up that difference of opinion ...
and also the fact that nobody has been "WHINING".

As Mak has previously stated, reading CAREFULLY what is written will usually set the record straight. Since this is an internation forum where everyone isn't syllable perfect in the 'international' language it's imperative that one "THINK" before one speaks.

I am absolutely convinced !!! nobody is out to deliberately upset anyone else but an indiscriminate word *CAN* do just that.

Subtitle: The case for polarisation switching.

Hello Al,
As you know, I work Sergey in Kamchatskaya (6800km) every weekend on AO-7 so "know" his signal.

As I have mentioned previously, like me, due to the mountains, he too, frequently uses knife-edge propagation as a "mode" on LEO's.

As you are of course aware, the polarisation of an electrical wave changes when 'reflected'.

This has to be taken into account when using knife-edge polariasation/reflection/refraction as a means to communicate via satellite (AO-7).

This morning, just to confirm that which I usually 'gob' about, I was 'active' with my polarisation switch. The difference in Sergey's signal was 'dramatic' with the signal strength varing between fully workable and totally unreadable.

Obviously, there are a few other parameters in the equation, propagation anomalies and what have you - but there's no question that the case for switchable polarisation on *LEO*'s is without a shadow of a doubt a distinct advantage when working more than 'spitting' distance.

There is not a lot of actual published information on the video format but it is likely to be a copy of the format used on early Russian satellites that carried TV cameras. It's not SSTV but likely to be some sort of early type of Automatic Picture Transmission format.

You can read what LA2QAA and myself know about Yubileiny and other Russian stuff at..

http://www.observations.biz/Observations_from_Russia/yub_intro.htm
and
http://www.observations.biz/Observations_from_Russia/index.htm

where there is also information on the forthcoming Chibis-1 mission.

Chibis-1 may or may not carry amateur radio equipment, it is primarily a science mission, but it employs a clever re-use of the Russian Progress freighter to undock from ISS with the Chibis-1 on board, filled with the station's trash, boost itself to 500Kms altitude, eject the Chibis-1 microsat, then perform it's usual re-entry and destructrion over the Pacific Ocean, but from the greater altitude of 500Kms. Chibis-1 is a mission to study lightning storms from 500Kms altitude.

Hi Folks.

It seems very likely that the forthcoming Chibis-1 satellite will be like this.

http://iki.cosmos.ru/innov/eng/chibis33.htm

The website says this....

The first microsatellite of IKI RAN Kolibri-2000 was designed in the frame of Russian-Australian educational project and was launched from the ISS orbit in 2002. Presently, the second microsatellite Chibis is under development.

So it seems that Chibis-1 may well be a follow-on mission for Iki RAN's Kolibri-2000 mission.

This one, to be ejected from a Progress, is the second satellite in a series. The website contains a drawing of the new Chibis microsat craft. Chibis will be loaded into a container fitted inside the the Progress by the cosmonauts and the Progress will undock and be raised to 500Kms before the microsat is ejected into space.

Hello Al, Florian and group

Last weekend I observed the same modulation as Yubileiny has on
Mozhayets-4 (RS22) when it flew over Moscow. It sounds like a little
electro motor. After LOS Moscow the CW-beacon was activated again.
The same procedure I could observe a few month ago with an other,
I think a digital, modulation. Further I think, this was test
transmissions for the GLONASS-system. This modulation I've heard also
from Yubileiny on the first orbits before the WXsat transmissions.

This are my observations from Switzerland.

From: Thomas Frey
Topic: 1641 Message: 1641

Hello All

I hope, there are also a few Russian OM's in this group who read this mail.

It is foreseeable that more russian satellites will be launched after all the mails we have read now. If all the coming satellites uses the 435 MHz band like Mozhayets and Yubileiny then we have a strong problem with coming AMSAT-satellites like P3E. We can prevent this problem with a frequency coordination thru IARU: http://www.iaru.org/satellite/

But if the russian authorities and satellite builders nothing knows about IARU and theire frequency coordination they will happily use our HAM-frequencies and we have problems and troubles.

Hi Folks.

VEGA is running late, over a year late at the moment and she's not yet ready. Here's one take on the launch date.

http://www.sworld.com.au/steven/space/ariane-man.txt

Arianespace are not saying much about VEGA. Being a new vehicle, that's hardly surprising. The program is behind schedule. For those in the group not familiar with VEGA, this is a new lighweight launcher from the Arianespace stable designed to launch small payloads of around 300-1500Kgs into Low Earth Orbit. Three solid propellant stages plus a liquid (hypergolic liquid)upper stage.

http://en.wikipedia.org/wiki/Vega_(launcher)
http://www.arianespace.com/site/launcher/vega_sub_index.html

From: Allan Copland
Topic: 1645 Message: 1645

Hi Folks,

Gunther's space place has a link to a launch manifest that includes VEGA but it was old and inaccurate. The most recent one I found was for a late 2008 launch, but that seems highly optimistic to me. When the first launch will happen is anyone's guess, but I'd bet on next year sometime.
I also inadvertently pasted in the wrong wikipedia link for VEGA.
It should have been.. http://en.wikipedia.org/wiki/Vega_(launcher)

VEGA seems to have been born out of a perceived need in Europe for a small launcher to replace European launches that currently take place on other countries launchers. It seems to have had quite a costly development and is not expected to be a profitable venture. But there is a need for such a vehicle.

I'm just as interested to know when Soyuz will start flying from Korou now that work is underway on the new launch pad there.

I believe the problem of non-co-ordination is one that will rapidly escalate and is not about to 'go away' any time soon.

Strange how so very few of these birds carry anything of real use to the average amateur satellite fan, yet they employ amateur radio allocations. This is my personal opinion, to which I am entitled. I am not the only person around to hold this opinion. I do talk to other radio amateurs.

If anyone with an ounce of clout in the International community reads these pages, I'd respectfully suggest that a move be made to initiate a shift of 'Educational satellites' off the amateur allocations and into an *Internationally negotiated* separate region of the radio spectrum.

I have nothing whatsoever against CUBESAT's but thanks to the rapid proliferation of these 'educational' birds, they are in great danger of overwheming the fairly narrow amateur satellite allocations that radio amateurs have available on the VHF and UHF amateur bands for their transponder based satellites.

No amount of IARU co-ordination is likely to result in a workable plan for *all* of the CUBSATS in orbit *and* under construction.

Perhaps the builders of these satellites should be campaigning for a separate 'Educational satellite' frequency allocation, rather than competing for scare spectrum space in the Amateur Satellite Service.

Lest anyone wants to shoot me down for making such a heinous suggestion, I *do* realise that 70Cms is a secondary allocation for radio amateurs. I do also realise that the *amateur satellite* segments on 2M and 70Cms are fast disappearing under the pressures of the educational users.

The UoS started the rot in 1981 with UoSAT1 and the later UoSAT2 but at least instigated a move of most subsequent projects into commercial frequency bands.

I do agree with Thomas that this is a problem, but I disagree that frequency co-ordination is the answer. There are just too many of these birds competing for spectrum-space in what is a strictly limited resource.

The real answer seems to be to accept these birds for what they are (College and University satellites.... not amateur radio ones), and negotiate separate spectrum space for them. Surely that would be a better solution than the situation we are currently in?

With TV in many, if not most countries going digital, perhaps another allocation could be found for these satellites in the UHF spectrum for Educational satellites.

The waning about "educational" satellites, in the "AMATEUR satellite portion of the spectrum, coordinated by the IRAU or not - has been given often enough.

I think a lot of folks - far too late in my opinion - are finally becoming aware that we (amateurs) *ARE* going to lose out to a proliferation of unlicensed university students.

Like sheep, they will copy what last week's university did ... and so on ... and so on ... and so on.

It has been stated on The Amsat-bb that this is a good "training ground" for future space engineers ... wishful thinking and a good excuse ... but IMHO t doesn't hold water.

The reason they use the amateur frequencies is because it's FREE.

Me too ... me too ... me too ... me too ... me too ... me too ...

Bææ ... bææ ... bææ ... bææ ... (probably an insult to sheep).

Hello Al. Theoretically UoS started the rot 1981. But (a great BUT), you can not compare the UoSats with the CubeSats. My opinion is, the rot began 1997 with Radio-Sputnik 17/Spoutnik-40 (http://www.amsat-france.org/spipamsat/article.php3?id_article=59). You can follow the stories and infos about old OSCARs and Sputniks on my list at AMSAT-DL.

Yes, its not *the* answer. But the gentlemen in the IARU-satellite-group makes a great job. They coordinates the CubeSats into the 437 MHz band and the AMSAT-satellites into the 435/436 MHz bands. This is the only way to prevent frequency collissions. If all the coming russian satellites are not coordinated in this way and they sends on 435 MHz, then we become troubles on the future transponders.

No Al, I disagree. You can not accept the situation with the CubeSats. This is a very big business now. You have to accept, that this Cubesats are selled with the consideration, that the unis can communicate in the HAM-bands. You can not "negotiate separate spectrum space" if this space is not present. There is a commercial requirement for this space and this

frequencies are expensiv. This is the reason, why the unis communicates with our frequencies.

The "real answer" is, that AMSAT-groups works closely together with the Universities.

Agreed, that RS-17 preceded UoSat 1&2 but the fact remains that there is a problem, and it's a *growing* problem thats not about to just 'go away.

No amount of wishful thinking and IARU co-ordination can make the limited band space, especially on 2M and 70Cms any bigger.

These bands the the ones that most radio amateurs with an interest in satellite work have equipment for and want to use, prime band space, if you will, for transponder birds.

Why not move transponder-less birds to higher frequency bands?
Not only would this help free space on 2 and 70Cms for tranponder-only operation, it would also give CUBESAT's, 'me-too sats', and downlink only birds a whole new technical challenge.

The IARU don't seem to be willing to confront what is a growing problem on the 2M & 70Cms amateur satellite allocations. Perhaps they don't see it as 'their' problem.

One thing is for sure, if nothing is done, and soon, things will really get out of control.

As long as university "ME TOO" !!! satellites are allowed to use the amateur radio frequencies in the guise of PROVIDING A SERVICE TO RADIO AMATEURS - (those are not !!! my words) - for FREE !!! ... mark my words, they will *NOT* !!! go away and the potential problem will increase with time if something isn't done.

Despite being forewarned, it's now far too late to - "nip it in the bud" - but perhaps not yet too late for a referendum and consequent letter to the body concerned with issuing these frequencies ... that is of course assuming there are enough people who can see the consequences if nothing is done.

I agree with GM1SXX ... move the university satellites to a higher band and give them some extra challenges ... component selection, doppler, auto tracking ... etc.

That !!!! will sort out the wheat from the chaff and pinpoint those who *ARE* interested in becoming the next generation of space engineers.

Agreed, that RS-17 preceded UoSat 1&2 but the fact remains that there

is a problem, and it's a *growing* problem thats not about to just 'go

away.

No amount of wishful thinking and IARU co-ordination can make the

limited band space, especially on 2M and 70Cms any bigger.

These bands the the ones that most radio amateurs with an interest in

satellite work have equipment for and want to use, prime band space, if you will, for transponder birds.

Why not move transponder-less birds to higher frequency bands?

Not only would this help free space on 2 and 70Cms for tranponder-only operation, it would also give CUBESAT's, 'me-too sats', and downlink only birds a whole new technical challenge.

Trevor,
Thank you for crediting me with ... "no amount of wishful thinking" etc ... in your mail - (below) - but it was in fact GM1SXX not me, who wrote this sentence ... it appeared as a CC in mail nr 1651 by Thomas Frey.

I *HAVE* used the phrase "wishful thinking" recently but the context was in reply to an opinion on the Amsat-bb that the University "me too" satellites provide a service to amateur radio, something I don't agree with. I believe they use amateur frequencies simply because they are FREE.

9 degrees I just figure out WHO can copy this bird? I "planned" to visit Dry Tortugas islands this summer while trying to activate some
"rare grids" but to be able to copy this one i will have to lived below Caracas Venezuala and up Macao Brazil! I "guess" some clever
student planned this orbit to get a "XYZ" ride to central/south america... I cannot blame them as if technology has been present couples of
years ago i don't know if i will be writing the same text? Anyway it is not worse or better than any other DXpedition but it is quite a
technical challenge for those students... A SOURCE OF INSPIRATION COULD BE?

In the context of IARU amateur band "surveillance/kind of rulings" i try to figure out how it is manadged. I it as the united nation was
supposed to be a democratic well balance forum or something else?

Your answers will probalby awake our satellite old sleeping beauty...

In the mean time see you on the birds!

FROM THE PRESS ROOM

On AO-51 V/S mode the week has been quite QUIET as AO-40 was at time...Without the infamous LEILA! A big thank's for the commanding team i
just hope they will go for another one as many folk's are building up their "Killing" apparatus on S band.

P.S. If someone can show me how to copy AO-51 nulling out the fades i will pay him a 807

Hello Al,
The only 'sure' thing seems to be the weekend skeds with Kamchatskaya ... of this I am proud ("chuffed" to you) because it shows that QRP can and does get through in less than optimun conditions (see the low propagation index) on AO-7 ... mind you, more than 5 stations at the same time and the old girl starts throwing a wobbler ... (for those unfamiliar with "Manchester" slang - it means FM'ing ... ie, AO-7 can only sustain 5 QSO's simulataniously, any more and she starts "complaining".

For the experienced operators ... please explain to your newcomer friends why AO-7 is a QRP satellite and why the power budget is as it is ... and give a friendly nod to those using too much power.

If you !!! had 32 years of spacedust on your !!! panels - you'd probably be feeling a bit under the weather too.

As GM1SXX is wont to say ... aluminium is cheap ... improve your receiving capabilities.

1658. AO-7 portable

Yahoo group: eu-amsat
Date: 2008-06-14 17:45:39 UTC
From: John Hackett
Topic: 1658 Message: 1658
Attachments: 4 described; binary payloads are missing from this source WARC

OBSERVATIONS FROM NORWAY. June 2008.

THE LA2QAA PORTABLE AO-7 STATION.

The portable station comprises the following items of equipment.

FT-290RII receiver.
0.4dB preamp
Headphones.
FT-790 700mW transmitter + mic
Homebrew 10w amplifier
Homebrew keyer and paddle
5 amp gel battery
Assorted cables
Split boom Arrow aerial - (diplexer removed)
Lightweight collapsable tripod camera
Shopping trolley/back-pack - (with handle & wheels)
Noka phone with SATme tracking software.
Bluetooth GPS - (position)
Orienteering compass
Creative Zen MP3 recorder

Everything packs down into the shopping trolley and takes approximately 5 minutes to set up.

Thereare several photos included in this short article. The rigs are selfexplanitory, they are light and easy to operate with gloves on in thewinter months. The aerial is the split boom Arrow with 7 elements on70cm and 3 elements on 2m. Remember, this is a QRP station for a QRPsatellite so you don't want to be lugging
around too muchaluminium. The lighweight collapsable camera tripod is very handy formounting the aerial for when your arms get tired from waving yourpointy stick at the sky.

The Nokia phone is essential since ithas the SATme tracking program installed. Remember to update the kepsbefore you hit the road. The Holux Bluetooth GPS receiver is selfexplanitory. If you move a fair distance from a previously setoperating position you'll want to know where you are and the GPS willtell you
- as well as give you the precise time for your tracking program.

Theelectronic keyer is built into a small spice box. Note the paddles ...they're *RIPPED* out of a standard joystick and perform exellently ...OK, not 'Bencher' standard but almost !!.

A boom mic attached to your headset, with a VOX could be an advantage too.

Theattenuator is a small homebrew -10dB item for the RA30H4047M 'brick'amplifier which is built into an aluminium lunchbox with forced aircooling from a small computer fan - 'heavy' heatsink material wasdeemed to be too clumsy for portable operation. The PA runs at 10woutput to keep it in the 'official' QRP limit.

The 5 amp battery is a gel type so it doesn't matter if it rolls over in your backpack/trolley.

Needlessto say, it's a geat advantage when operating portable to useheadphones. The signals *WILL* be weaker than those from the averagebase station so I would appreciated if people also try to work the weakones as well as the exotic DX.

Remember, Frei Island is IOTA-EU-36 and anyone working me portable will receive a special AO-7 anniversay QSL card on request.

Freiis surrounded by mountains except to my north so being portable is adefinate advantage when the bird is coming up from my south.

Dimitrios,
Very pleased to know you my friend. Mak has told me about you. He says you're a very clever man indeed.

He may also have mentioned, we started EU-Amsat together.

I certainly look forward to working you on CW sometime. At the moment, my home station amplifier is *NOT* linear so I can only use it on CW. If I try to use SSB the signal is *VERY* distorted so I will not put distortion on AO-7.

The exciter (FT-790) only has 700mW barefoot so I *have* to use the amplifier ... it's a modified mobile phone base station amp ... so unfotunately, I'n "stuck" on CW until I get time to modify the amp to make it "linear".

I suppose Mak has told you about <http://www.observations.biz>
You are very welcome to write your experiences Dimitrios, I'm sure they will be of interest to others and we'd love to have an
"Observations from Greece" article ... new operators to amateur satellites are *MOST* !!!!!! welcome.

Do *NOT* !!! worry about language, spelling etc - I'll edite things and send it back for your approval and permission before publishing anything. You do *NOT* have to be a professional writer. Tell us anything !! ... about your station, who you work, whatever !!.

Have a ood day Dimitrios.

Dear john

First of all i would like to thank you.
I will write soon an objervation from our small but good team! Of course Mak said to me about the group!!! We plan with Mak and Kostas to build a good portable station and operate from some mountaintops!!! i think that with this way we will make some more miles on AO7 here in greece we are like the small Smurf's Village. Kostas SW1EIX is Brainy smurf with his clever homebrew Constructions ,
I am the Greedy Smurf as you can see my web site (www.sw1jgw.com) and of course Mak is the Papa smurf who advice us to do the right think and helps us everytime we need it (thank you master!!). The problem is that here in Greece we have more than One Gargamels but this is another story for another email!!!

thank you
Dimitris

PS have a nice WEEK!!!!

1662. The IARU, Satellite Frequency Co-ordination and the CUBESAT Bands.

Yahoo group: eu-amsat
Date: 2008-06-16 08:33:45 UTC
From: Allan Copland
Topic: 1662 Message: 1662

Hi Folks.

Having read through the material pointed to by Trevor, it seems the case that unco-ordinated satellites and the proliferation of University CUBESATs on 2M and 70Cms (the prime bands for linear transponder birds), are indeed a problem that is not being addressed, or about to be addressed, any time soon. Sure, there will be talk about addressing the problem, but that's all.

As best I can understand, the IARU believes it is an issue for local (National) radio societies. With no-one 'steering the ship', as it were, it's hardly any wonder it ran aground a long time ago.

Complaining to your national radio society is unlikely to carry much clout for a satellite builder at the other end of the world. In short, it's a free-for-all.

It's not a new problem either, see Altruistic radio amateurs (1994)
ftp://ftp.amsat.org/amsat/articles/satgen/sgen268.txt

John GM4IHJ noted this growing problem 14 *years* ago, and yet nobody seems to care. Perhaps we really do get what we deserve.

It's likely that AMSAT will be a forgotten organisation once the two most useful band segments we are allowed are littered with 'me-too' satellites.

Can you imagine a future scenario....not too far in the future.

'Linear transponders on 2m & 70Cms?'.... don't be silly, those are the Cubesat bands :-).

Further to my email posted earlier this morning, a new satellite project is announced.

See..
http://www.southgatearc.org/
http://www.southgatearc.org/news/june2008/spanish_cubesat.htm

This one,doesn't even have a clearly defined mission. There is some talk of testing SDR in space. I'm sure it won't be the first to do that.

There's no real need to take an SDR into space when these things can be tested on the ground in a test rig. It's cheaper too! Vacuum chambers and irradiation facilities do exist on the ground.

The only thing the builders seem to be certain about is that it *will* transmit in the amateur radio bands.
According to it's builders... 'it may end up with just a Telemetry beacon'.

So, to my question. Is this really an 'Amateur Radio satellite'?

Hello Al

I'm a little bit surprised about your statement "There's no real need to take an SDR into space". As you know, there are particles in space which can hit the computer hardware and destroy it. OK, we have experience with flying mail boxes but not with SDR in space. On SuitSat-2 SDR will also be testet. Tell your statement to the guys of AMSAT-NA and ARISS ... ;-)

Later we all can to profit from this experiences for P3E. P3E will get SDR-transponders and has no conventionally transponders on board.

Try to answer this question to your self. If you want a satellite for worldwide chats, then NO. If you want a satellite with scientific experiments, then YES. It's wonderful to have so many satellites for so many HAMs in the orbit. It's like TV, you can "zap" around. But, to my further statement, all our satellites MUST be coordinated that they are not disturb each other.

1668. IARU Region 1 Cavtat Conference Nov 2008

Yahoo group: eu-amsat
Date: 2008-06-16 19:50:25 UTC
From: Trevor
Topic: 1668 Message: 1668

I hope that Amateur Satellite operators in Region 1 will be explaining the benefits of the IARU Region 1 Cavtat 08 2 metre satellite expansion paper and the other papers that relate to Amateur Satellite operation to their IARU recognised National Society.

It's the delegates from these societies that will decide the issue. The vote of smaller countries such as Norway is same as that of larger nations such as Germany or the United Kingdom.

If nobody takes the time to explain to these Societies what Amateur Satellite operation is about and why an expansion is needed then we should not be suprised if delegates who know nothing at all about the Amateur Satellite Service do not support it.

1669. Public Consultation on the European table of frequency allocations

Yahoo group: eu-amsat
Date: 2008-06-16 20:32:35 UTC
From: Trevor
Topic: 1669 Message: 1669

On Monday 16th June the European Radiocommunications Office (ERO) announced a public consultation on the European table of frequency allocations and utilisations in the frequency range 9 kHz to 3000 GHz, ERC Report 25.

A key feature of the report is footnote EU9 which says:

"In a growing number of CEPT countries, parts of the band 70.0-70.5 MHz is also allocated to the Amateur service on a secondary basis."

It also incorporates the WRC-07 decisions on 136 kHz and a WRC-07 radio regulatory guidance note regarding the 500 kHz entry.

The consultation can be found in the list of ERO active consultations at
http://www.ero.dk/consultation

ERC Report 25 can be downloaded from
http://www.ero.dk/6121184A-3C02-4C3A-A695-250B25B2F711?frames=no&

Responses should be sent to Fatih Yurdal <yurdal@...> and the consultation closes on 16-Aug-2008.

> There may be complaints about LEO-FM birds that are justifiable, but? the fact that you can work one with a HT is not one of those arguments.
> Bob W0DXZ DM33

A question of unbalance who create a question of Usefullness. When the newbies will be "experts" they will probably look for something
else? what the satellite community has to offer? Plans, future plans, projection, funding campaign? Then they will also probably ask for
the "Usefullness" of LEO'S.

It's like eating peanuts before the lunch too much of it will only lead to a loss of appetite!

LEO HEO
AO-51 0
VO-52 0
SO-50 0
AO-27 0
AO-7------>! 0
AO-16 0
FO-29 0
ISS 0
GO-32 0
----
9 0

P.S. AO-51 last V/S mode was at least a bit of challenge but with very few users. It was a good time to test new S band antenna's. The
foliage absorption at those frequencies is also very noticeable i was able to pin point every tree around my QTH making the satellite
usable only over 14 degrees reducing even more the usable time slot. The most dramatic effect is the fades coming from the satellite spin
of the polarisation? i don't know but some are reporting receiving more fades that usable signal. Is it mode S suitable for LEO.S i'm not
sure even if i was able to have a QSO with a mobile station in V/S!!!

For those who may be interested, the attached PDF ought to be noted, read and digested.

Should the established amateur satellite frequencies be changed? ...
or should the Cubesats ,FN sats and the neighbour's dog use the proposed different frequencies - of course, under the guise of 'educational' satellites.

Like Eddie Cochran did in 'Summertime Blues' - contact your congressman and give him your views.

Fair warning though, decisions are usually made long before
"Joe Bloggs" is asked for his opinion ... it makes it "look" democratic.

1677. SSTV on AO-7

Yahoo group: eu-amsat
Date: 2008-06-18 08:48:45 UTC
From: John Hackett
Topic: 1677 Message: 1677

To the person transmitting SSTV on AO-7 on orbit 53723 this morning, Wednesday the 18th of June.

It's difficult to say whether you were deliberately transmitting over the other stations in QSO or whether your receiving system was so inadequate you just couldn't hear them.

Surely !! you could hear the transponder FM'ing ?? ... or perhaps you didn't even realise it was "your" 100% duty cycle transmission that was the reason for the QRM and FM'ing.

If you're a newcomer, you are most welcome but please please read up on how to operate a satellite that has a negative power budget.

SSTV is *NOT* recommended for AO-7 and certainly not on top of other stations already in QSO.

If you get your rocks off by deliberately QRM'ing and you're one of those poorm souls who need attention ... you've got it ... now please go and play elsewhere.

73 John. <la2qaa@...>

1678. An Observation.

Yahoo group: eu-amsat
Date: 2008-06-18 16:49:16 UTC
From: John Hackett
Topic: 479 Message: 1678

An interesting post on the Amsat-BB from KC6UQH - whom stated ... and I tend to agree ... HEO's are generally *EASIER* to work than LEO's.

That one needs expensive equipment to work an HEO is a myth that is simply *NOT* true. - (try telling GM1SXX it's expensive) - it's his pet niggle.

Personally, I've worked the world on HEO's using an FT-290 and an FT-790, both of which are 20 years old and purchased used on Ebay - neither rig has bells and whistles, no automatic doppler tuning and no computer interface. I used an El Cheapo Japanese azimuthal TV rotor, fixed elevation and a maximum EIRP of 25 watts ... yes !!! - E.I.R.P.

(see "How much power is enough") <http://www.observations.biz>

I have satellite QSL's from all corners of the world.

(The world doesn't have corners twit, they're "round".....GM1SXX).

Things like aerials, a preamp and a 5 watt PA were all home made.

Despite certain schools of thought, circular polarisation is *NOT* a necessity.

(A further discussion of circular polarisation can be found on the OBSERVATIONS website) - <http://www.observations.biz>

Expensive to work an HEO ?? ... Gerroff !!!!. It's only expensive if you absolutely must follow the route of - Mine's bigger than yours" mentality.

BTW Ib - (OZ1MY) - I agree with most of what you say but would like to point out that not everyone who would like to operate amateur satellites can afford a rig that supports auto doppler tuning if one moves to higher frequencies for LEO's as you suggest. Radio amateur satellites ought to be available to all amateurs - not just the affluent ones.

As station "developement" I used the excellent ITUNE software and a homebrew interface via the push-buttons to give the rigs auto-doppler tuning for full doppler tuning at the satellite.

Again - as cheap as chips - (those you have with fish).

Expensive ? ... difficult ? ... Ballcocks !!!!.

> talk to NH7WN in Hawaii, each of us standing outside in the wind
> holding handheld antennas and HTs on 5 degree passes. I could make it
> harder. I could use smaller antennas or less power.

It sound like the OLD jingle as CW will pass where nothing else will pass... that's why i wrote it will be hard to keep the interest alive
for the newbies with peanuts..Just bear in mind if AMSAT want's to have development they should consider what's the real world is! . but
there is a huge potential for the amateur radio satellite development but AMSAT should go towards the universities as it is obvious they
will don't do the same as they are not doing it actually. It is only the tips of the iceberg as the IARU is not even consulted in the
satellite frequencies allocating process...BTW just check how IARU is composed? In the NAFTA era is it an outdated body? They don't have
any power at a time Jim Baker and Tammy (PTL) had a lot more power...

Bottom line all the commenting are in a vicious circle spinning around and if we don't stopped it we will ended up down the drain...Like it
or not the question is very simple NO HEO NO SALVATION we will burn in hell fire:)

A wisdom vision:"speaking of wisdom even today the word "nerd" is still meaning something.." Tammy Baker (PTL)

As an "silent" observer of AMSAT since year 2000 i always ask myself how the every same candidates can have new and genuine thoughts and
ideas when they are coming on the board election after election? Could be if they can tell us what where their goals and what they achieved
in their past mandate some of us can make a bit of sense of this whole affair?

Here is some questions who can be interesting to see answered

What is the state of construction of eagle?
What are the plans regarding the launch?
Who will be the launcher?
If money is missing somewhere how much is needed to have a launch?
If resources are short here in North America Is AMSAT-DL is facing the same issues?
If there is a world-wide shortage in funding is it not logical to try to regroup all the available funds to at least be able to achieved a
launch before a new centennial membership class is implemented?
If one university was looking for projects is AMSAT-NA is ready to send them a wish list?
or do they prefer to remain in the HAM WORLD
only business waiting for the charming Prince?

If those who wants to be elected on the board prefer to warmed up their chair instead of answering the above mentioned questions it will be
a fair and valid reason to remain on the board but it will be nice having them confirming this know fact. In case where our assumptions
where found not exactly representing the reality, this pre election period will be a good opportunity to bring correction to our bad
reality evaluation.

This always said on a very positive tone.

1687. AMSAT-UK International Space Colloquium 2008

Yahoo group: eu-amsat
Date: 2008-06-24 23:32:40 UTC
From: Trevor
Topic: 1687 Message: 1687

AMSAT-UK will be holding their 23rd International Space Colloquium at the University of Surrey, Guildford, England from Friday 25th until Sunday 27th July.

There will a tour of the Surrey Space Centre facilities that is always popular and provides a unique opportunity to see satellites in various stages of construction.

On Friday in addition to the main lecture programme there will be a special "Beginners Workshop" to show newcomers how to use the many Amateur Satellites that are available.

The event is open to all Radio Amateurs and SWL's. Either Day passes or full packages comprising overnight accommodation and meals at the University are available. An online booking service is available with PayPal, Visa and Master Card payments accepted.

For further details contact Jim Heck G3WGM Tel: +44 1258 453959
Email: g3wgm@...
Web: http://www.uk.amsat.org/Colloquium/ (see Travel for maps)

1689. Aegean VHF Contest

Yahoo group: eu-amsat
Date: 2008-07-03 11:48:56 UTC
From: SV1BSX
Topic: 1689 Message: 1689

Hi all,

sorry for "off topic" but this weekend, 5 & 6 July, will take place the biggest VHF contest in Greece - the
AEGEAN VHF Contest.

As the most of Satellite operators are also "fans" of VHF-UHF bands, just take a look by "pointing" your antennas
to SV-land.

Several SV stations they will be climbed in mountain tops, so it's a great challenge for "Long Distance" QSOs.

It should be great pleasure for us your participation from all over the Europe, W.Asia, M.East and N.Africa
(of course, if that is possible - depending upon propagation).

1690. P3E News Q2 2008

Yahoo group: eu-amsat
Date: 2008-07-03 17:01:51 UTC
From: Thomas Frey
Topic: 1690 Message: 1690

Erst in Deutsch, dann in Englisch
First in German, then in English

Update Phase-3E
==========
- Alle mechanischen Arbeiten an P3E sind beendet.
- Der Bordcomputer fehlt noch.
- Mit dem Stand der Arbeiten an den Transpondernutzlasten zeigte sich Peter G?lzow, DB2OS, zufrieden. An der HAM RADIO 2008 in Friedrichshafen wurde der SDR-Transponder (SDX) vorgef?hrt.
- Ein Startangebot von Arianespace f?r P3E ist f?r die AMSAT-DL zu teuer.
- AMSAT-F hat ihre Unterst?tzung bei weiteren Startverhandlungen mit Arianespace zugesagt.
- Es wurden auch Kontakte mit anderen Raketenbetreibern in Indien, Russland und Japan gekn?pft. Aufgrund der aktuellen Finanzsituation wird ein Start von P3E nur als Kombistart mit dem P5A-Satelliten finanzierbar sein.

Update Phase-3E
==========
- All mechanical work on P3E is finalized.
- The On Board Computer is missing still.
- With the conditions of the work on the transponder payloads Peter G?lzow, DB2OS, is contented. At the HAM RADIO 2008 in Friedrichshafen, Germany, became the SDR-Transponder (SDX) demonstrated.
- A starting offer of Arianespace for P3E is too expensive for AMSAT-DL.
- AMSAT-F has assured its support for further starting negotiations with Arianespace.
- Also contacts with other rocket operators in India, Russia and Japan were made. Due to the current financial situation a start of P3E becomes only as
combination start with the P5A-Satellite eligible for financing its.

1693. Special call sign VC3C

Yahoo group: eu-amsat
Date: 2008-07-07 03:14:43 UTC
From: Luc Leblanc
Topic: 1693 Message: 1693

To commemorate the 400th anniversary of Quebec city foundation by Samuel de Champlain on the third of July 1608 marking the continuous
french presence in North America a special call sign has been issued "VC3C"

I will activate this very special call sign on all available amateur satellite from July 7 to July 13. On July 13 the mobile communication
unit "On the Champlain Road" who travel the same route along the St-Lawrence as Champlain does in 1608 400 years ago will be in Sorel-Tracy
where Champlain enters in the Richelieu river (see below the ****) and was the first to european to discover the Lake Champlain. The
station will be located at the Governors House in Sorel
http://grandquebec.com/monteregie/maison-des-gouverneurs/ (The tower in the back
ground is located on the roof of the Sorel-Tracy ARC HQ.)

People of French descent across North America can trace their history back to Québec City, recognized today as the cradle of French
civilization in the New World.

At one point, Québec City was at the center of New France, an empire that covered all of Eastern Canada and almost half of the current US
territory. French North America extended from the Gulf of St Lawrence to the Great Lakes and from Hudson Bay to the Gulf of Mexico.

Although this empire was not to last, Québec City, as the capital of Lower Canada and later, of Québec, has continued to grow and thrive.

A Timeline for Champlain

Around 1570: Champlain is born in Brouage to a seafaring family. He studies navigation and cartography.

1595-1598: He serves in the royal army of Brittany

1599-1601: He travels to Mexico and reports to King Henri IV

1603: First voyage to Canada. He explores the St. Lawrence River as far as the site of today´s Montreal. He publishes his
first book, Des Sauvages.

1604-1607: First French foothold in Canada on the Acadian shore. He explores the coast as far as the site of today´s Boston.

1606: He meets with Marc Lescarbot, who returns to the Acadian colony, and writes Histoire de la Nouvelle-France (published
in 1609).

1608: Champlain founds Québec.

1609: He discovers the Richelieu River and Lake Champlain. He allies with the Hurons against the Iroquois.**********

1610-1613: He sends Étienne Brûlé to the Montagnais.

1613: He explores the Ottawa River (the Outaouais). He publishes an account of his Voyages since 1604.

1614-1616: He discovers Lake Huron and Huronia.

1619: He publishes an account of his Voyages since 1613. As of 1620, he remains almost continuously in Québec.

1627: The Compagnie des Cent-Associés administers Canada.

July 19,1629: The British take Québec.

March 29,1632: The Treaty of Saint-Germain-en-Laye restores Québec and Canada to France.

1632: Champlain publishes a chronicle of all his Voyages since 1604.

December 25,1635: Champlain dies in Québec.

What would be the logic / algorithms for computing P5A's position once it's launched? It would not be Kepler data I assume. Any links anyone to the general theory of this?

Hi Simon,
Patched Conic Sections, or 'patched conic approximation techniques' are one means of interplanetary navigation. Google should find some hits for you.

In short, you attempt to navigate a craft down a series of imaginary cones of uncertainty, aiming to converge your parameters to match a point in space. It's a variation on 'successive approximation' type technique.

http://en.wikipedia.org/wiki/Patched_Conics
http://en.wikipedia.org/wiki/Orbital_mechanics

There are other (more recent) methods involving the measurement of gravitational perturbations.

Simon,

Have a look at Hohmann transfer orbits.
http://en.wikipedia.org/wiki/Hohmann_transfer_orbit

The Hohmann Transfer Orbit is an energy-efficient means to move
between co-planar planets. Mars gets an honorable mention here.
I'm sure this mission would be a standard Hohmann Transfer.

The best place to find data for real planetary vehicles might be to
try Nasa's deep Space Tracking network. I imagine that some data will
emerge from there in due course for this mission.

1699. IARU Satellite Forum 2008

Yahoo group: eu-amsat
Date: 2008-07-10 06:49:16 UTC
From: Trevor
Topic: 1699 Message: 1699

AMSAT-UK is hosting the International Amateur Radio Union (IARU) Satellite Forum 2008 that will be held as part of the International Space Colloquium at the University of Surrey, Guildford, England.

The IARU Satellite Adviser Hans van de Groenendaal ZS6AKV will chair the forum that is sure to prove popular with those attending the Colloquium.

The forum will be attended by the RSGB Microwave Manager Murray Niman G6JYB who will be available for questions on the papers relating to Amateur Satellite operation being presented by the RSGB to the IARU Region 1 conference at Cavtat in November.
http://www.southgatearc.org/news/june2008/iaru_satellite_papers.htm

The IARU Satellite Forum will be held on Sunday morning 27th July in the University of Surrey Management Building lecture theatre. A site map showing location of the Management Building and the adjacent main car park and conference visitors parking can be seen at http://www.uk.amsat.org/images/stories/uosmap6.jpg

IARU Satellite Forum Agenda

· Report form the IARU satellite Adviser
Hans van de Groenendaal ZS6AKV

· Discussion on the frequency wish list for Amateur Satellite Frequency Allocations as discussed at the 2007 Forum held in the USA
1. IARU AC Feedback
2. Possible revisions
3. Next steps

· ESA Education VEGA Maiden Mission Frequency Coordination
Graham Shirville G3VZV

· Control of Satellites in space

· Discussion on Paper to the IARU Region 1 Conference : IARU Member Societies are requested to Support Satellite Frequency Coordination

· Any other matters

The 23rd AMSAT-UK Colloquium will be held at the University of Surrey, Guildford from Friday 25th until Sunday 27th July.

The Colloquium is open to all Radio Amateurs and SWL's. Either day passes or full packages comprising overnight accommodation and meals are available. An online booking service is available with PayPal, Visa and Master Card payments accepted.

For further details see http://www.uk.amsat.org/Colloquium/

1700. SX1FRE Special Callsign

Yahoo group: eu-amsat
Date: 2008-07-10 08:57:15 UTC
From: SW1JGW
Topic: 1700 Message: 1700

A Greek ancient system of communication with fire from torches above mountaintops is called fryktories from fryktos that means "the torch" in Greek . (see more http://sx1fre.blogspot.com)

On 13 of July 2008 and after 3200 years we will be climbing up the same mountaintops with Turkish Hams and will transmit through the hamradio frequencies a message from Troy ☐ located in N.W Turkey up to Mykines that is in Southern Greece using a special call on every mountaintop that the original message passed through. The same mountaintops are mentioned from Aeshylus in his drama "Agamemnon" and they are the ones that brought back to the Mikines city the message that Troy has fallen into the hands of the ancient siege army.

The transmitted message will be passing along the nodes on the 2m band from one station to another.

The special calls that will be used through this campaign will be:

Turkey
Mountain Ida(Troy): to be announced.

Greece
Station 1 (Lemnos Isl): SX8FRA
Station 2 (Athonas mnt) : SX2FRB/A
Station 3 (Kandili Evia): SX8FRC
Station 4 (Mesapio, Biotia): SX1FRD
Station 5 (Kitheronas): SX1FRE
Station 6 (Gerania): SX1FRF
Station 7 (Arachneon, Peloponisos): SX3FRG
Station 8 (Mikines): SX3FRH

Every Station will have at least 2m SSB/FM capability with yagi antennas. Before and after the event every station will be trying to make as many QSO's as possible with the special calls. Also that day we expect that many other hilltops will be activated in 2m band from other Greek and Foreign hams that will be joining this event.

I will be QRV from Kitheronas mountain with the call SX1FRE.
Except me the other ops will be SW1IXP SV1EEX, SV1EOS, SV1JGX, and SW1JCO
GRID LOC: KM18OE.

Will be active in 80- 70 cm. . Also will try LEO SATS and will operate through the 2008 IARU HF World Championship with the special call.

Operating times: Sat 12/8/08 at 10:00 local time till 13/8/08.

QSL cards will be sent via the SV buro.

For scheds concerning the SX1FRE activity On HF/VHF BAND pse contact SV1EEX at : SX1FRE Site:
http://sx1fre.blogspot.com

For scheds concerning the SX1FRE activity On Satellites pse contact me at
mc90606@hotmail.com

BEST 73 AND HOPE TO WORK YOU ON THE BIRDS
ON BEHALF OF SX1FRE
SW1JGW ☐ JIM
(www.sw1jgw.com)

PS On Satellites VO52 and AO7 we will be QRV on middle pass band. Any station that will contact us is requested in the existence of traffic not to call us again because we want to contact with as many stations as possible.

1707. NAMSATE AND EAGLE PROJECT ARE DEAD!!!

Yahoo group: eu-amsat
Date: 2008-07-14 06:21:35 UTC
From: Luc Leblanc
Topic: 1707 Message: 1707

As usual AMSAT-NA is keeping the crowds unaware and uninformed on AMSAT-BB and on purpose...NAMASTE and EAGLE project are from my point of
view literally dead! For those who are still believing on a HEO made by AMSAT-NA forget it they "HALTED" NAMASTE et fired out the EAGLE
team leaders

Here is some e-mails exchange...

It seems obvious now that AMSAT-NA projects are collapsing NAMASTE is dead and EAGLE PROBABLY WILL BE HALTED TOO?????
SEE BELOW THE FULL EXCHANGE AND PLEASE READ THE THREADS ON:
http://amsat.org/pipermail/namaste-dev/2008-July/thread.html

Here is an excerpt moving around the "Super duper" AMSAT-NA president on the NAMSATE reflector

> At this time, all group leaders on the Eagle project
> are relieved of their leadership duties.

So is Michelle STILL team leader?

> At this time, all group leaders on the Eagle project
> are relieved of their leadership duties.

Are you NOT contradicting yourself here, Rick?

Just some clarification here please.

James W8ISS

NO MORE EXCANGE BEYOND THIS POINT!!!!!

AMSAT-NA is on a crashing course i doubt this group will survive up to the end of 2008! Sad news but could be under a new leadership things
can still have some chance of success!

P.S. I just hope i am dead wrong here?

Seems like a great shame but these things happen from time-to-time, it's only human. In the past I have wondered why AMSAT US maintains the buildings and staff that they have - but I'm not a member and haven't really tried to find out, so mea culpa. I wish AMSAT US all the best and hope that things come together so that the future projects reflect the fine engineering of past projects.

http://amsat.org/pipermail/namaste-dev/2008-July/thread.html

No many positive mailings there I am afraid. My hopes rest with neighbours in the big canton to the north of Switzerland (aka Germany) :-)

At least we have the moon and a friend has a nice big 10m dish with SSB echoes on 23cms at about 12dB above the noise.

Hello Florian and group

I don't think so. The great problem is not to build a satellite but to finance a launch for a satellite. If we want more HEO-sats in orbit, then we all, AMSAT-NA + AMSAT-DL + all AMSAT-organisations worldwide has to concentrate to 1 (ONE) project and collect all the money together. If we don't find a joint way, AMSAT will leave the (battle)field to all the universities with their cubesats. And this is not what we want in the future.

Hi Folks,

I don't see how comparing HEO's to CUBESATS has any relevance whatsoever. Rather like comparing chalk to cheese. They are different things entirely. The Universities *are* already there and AMSAT are just one of the many users, competing for slots in the 'amateur' satellite allocations, as well as for launches to LEO. You never can tell if or when HEO will become attractive to the education community. Time will tell.

The situation on the 'battlefield' already is a free-for-all and has been for a long time. I suspect it's that way because nobody of any perceived importance complained in the past. Not all AMSAT members want a new HEO anyway, some want other things instead. The choice is simple, fund what *you* believe in and ignore the 'party line'. For those who want a new HEO, great, you know where to send your money. I do hope that AMSAT sorts this mess out soon. The membership deserves better.

Ah yes, back in bed with the education sector! I'm sure the
'dowlink-only' "educational satellite" sector could fimd a use for a
HEO launch without much difficulty. It would probably have been done
before, but no matter, it could be reinvented just for the
opportunity. It seems to work as a strategy with CUBESATS.

As to LEO, there are different types of LEO. Different inclinations
and different orbital heights. The Russians do some nice near-polar
orbits with good footprints. I'd rather see something of that nature.
For the cost of a single Molniya type mission, you could place a fair
number of useful birds in highish near-polar orbit. IMHO much more
fun. They'd spread out of course once deployed, but that would of
course add greatly to the fun element. It worked before... and AMSAT
weren't even involved.

As I mentioned earlier, we don't all want the same things.

73 Al.
P.S. if you do manage to secure a manned launch to nowhere, I vote
that Gordon Brown gets a seat. (joking!)

You are right Al, I have to clarify me. I meant the following or let
me numerate a worst case scenario:

Year 2010:
- Officers and members from AMSAT-NA are distractible about
Eagle and Phase-4-Light. None of them is in orbit.
- There are 100 CubeSats in orbit.

Year 2011:
- P3E is still on ground, no launch opportunity was found.
- There are 200 CubeSats in orbit.

Do you see what I mean ?

Well, this is 2008, not 2010 or 2011, but to a degree, I see what you mean. HEO's are expensive, complex, take considerable time, effort and quite a bit of money to build and are large and heavy, so expensive to launch.

CUBESATS by contrast, are small and light (<=1KG!) and launched in multiples to share the cost. CUBESATS are relatively cheap to build. They can even be bought 'off-the-shelf', just like a kit car. They can also be assembled quickly. There is absolutely no comparison between the two.

Get used to CUBESATS. They might not actually do anything interesting or useful to the average radio amateur, but they are not about to go away. It seems to be deemed acceptable practice to 'hijack' amateur satellite frequencies for 'educational' satellites.

At least they don't compete for funds with AMSAT satellites, although they *may* do for launch opportunities to LEO.

The fact also remains that other amateur satellite groups have different priorities and HEO is not the only kid on the block.

There are launch costs and there are launch opportunities. They are two separate but interlinked things. Are you saying that there is no money to launch the bird, or there is no opportunity to launch the bird, or both? If the answer is no to both questions, then there is a big problem!

73 Al.

(battle)field to all the universities with their cubesats. And this
is not what we want in the future.

Mit freundlichen Grüssen, Regards, 73
Thomas Frey, HB9SKA

I have been sat on the fence with this as I am new to this side of the hobby
and felt I had nothing to offer, due to a lack of knowledge especially where
AMSAT is concerned.

I think what Thomas says makes great sense to me, this hobby is able to come
together in times of need where there is an emergency, for the social side
at hamfests etc and for the sport side of things in contests. I fail to see
why we, collectively can□t come together with one project that enable the
participation of everyone.

Ok, the logistics of such a task will be difficult, and many will feel their
feet are being trodden on by other groups, but I think in order to survive
and progress the groundwork should be done. After all, does it really matter
where the □kudos□ lies, if the end result is a success?

Hi Al & Group,

I believe the problem is *always* the money. However, if we want to have
a HEO, I can NOT see any other solution except the donation from... our
pockets!

What is the rest budget? 1 million $ ?

Well, if each one SATellite-fan donates 333$ and we are 3.000 donators,
Voila ! 1 million is available.

Personally, even if I am not a rich man, I could donate this additional
amount
if I know that the HEO has a deadline ie. till the end of 2009.
And I believe a lot of hams will do the same.

The question is: are we enough peoples on Satellites ?

If NO, I believe the HEOs are just a forgotten case. The money was, is,
and
it will be the "fuel".

With good electronic diagrams, wishes, prayers and ...kisses,
sorry but the HEO is impossible to be in orbit.

Needs money-money-money..... quite simple. And if the money is available,
the launch-opportunity is just a detail.

73, Mak SV1BSX

Fully agreed Al. But AMSAT-DL (I'm a member) _WANT_ a HEO. And also
members from AMSAT-NA want a HEO. But 2 HEO-satellites at the same time
is mad. I can not understand, why AMSAT-NA is not fully supporting
AMSAT-DL with P3E. We had full support for AO-10, 13 and 40. Instead
they want Eagle and "P4L". What happend in NA ?

If I read the fiasco brought to our attention in this thread and the article under http://www.southgatearc.org/news/july2008/p3e_update.htm (my own last news), then yes, there is a big problem.

Here are also a few values which I heard in Friedrichshafen:

To launch P3E with a mass of 150 kg costs 3 Million Euro. You have to pay 20'000 Euro per kg to Arianespace. And the launch campaign costs another 1 Million Euro. The costs to build P3E are not included. This 4 Million Euro are also 6.364 Mill. US$ or 6.4677 Mill. Swiss Franc.

Again, I can not understand the way from AMSAT-NA.

>Again, I can not understand the way from AMSAT-NA.

I think I do..... it's simple, it wouldn't be 'their' project.
20K /KG as launch cost seems high to me, but there again, it would (hopefully) be going to GTO and not LEO for that cost. And there is money for a launch adapter to find.

It seems obvious to me at least, that there is not enough money in the pot to go around for two concurrent HEO birds. Add to this the (AMSAT-NA led I believe) proposal to integrate amateur radio payloads into Intelsat birds and the equation becomes even more lopsided and unworkable. Of course AMSAT-DL wants to go to Mars, so that rather restores the balance of financial sillyness.

Both AMSAT-NA and AMSAT-DL have some very good people with good ideas but there is simply no way IMO in which all this stuff can be funded.

From what I've read, the Intelsat transponder idea is not for use by paying AMSAT members, but rather as a means of guaranteed communications in times of disasters. I may be mistaken, but thats what I believed many existing comsats did anyway (Iridium and others). OK, it's not real-time, but store-dump is a proven and reliable technology. Perhaps other readers know differently re the Intelsat idea? I think the Intelsat could provide narrow band comms at other times but it seems like geostationary 'pie-in-the-sky' to me as far as being a financially viable concept. Of course, I'd be happy to hear otherwise. Most importantly though, who will want to help fund it? Would they really be able to 'sell' the idea to the membership?

Personally I can see nothing remotely interesting whatsoever about geostationary birds.... but that's just me! As our friends in the US are wont to say, Your mileage may vary... or as they say here, 'whatever floats your boat'. A bird that's 'nailed to the sky'.... no thanks!

I see another 'fly in the ointment' re GEO's..... they don't move, so
is it fair to expect funding from outwith their footprint?
Fortunately, that is a question for others, and not for me. One thing
is for sure. There is not enough money around to do all of these things.

The launch costs for cubesats each weighing 1 kg into a 650 km LEO orbit are I believe $20,000. I had heard that cost may rise significantly in the future.

The launch costs for other Amateur satellites, AO-40, AO-13 etc have always been several million dollars. We were fortunately with previous sats that we only had to pay a small fraction of the true cost.

> It seems obvious to me at least, that there is not enough money in the
> pot to go around for two concurrent HEO birds.

I believe there is only one HEO (eliptical orbit) VHF/UHF satellite targeted for launch in the 2009-2012 timeframe and that's P3E.

The GEO proposal has the advantage of a free launch by Intelsat and I believe funding from the Dept of Homeland Security.

From a British/European perspective we have to hope that the first of these payloads ends up somewhere near a 70 degree west slot but clearly it could equally well be over the Pacific.

I've not seen any timescales as yet for the GEO but given that it's leading edge technology the complete development cycle will take sometime. Fortunately they do not need to complete everything on the ground prior to launch. Software development could continue to take place after the satellite was placed in orbit.

Has anyone checked out Intelsats launch plans for the 2011-2014 timeframe to see which orbit slots they are going to launch to ? That information may well be on the web somewhere.

Hi

Regarding "misinterpretations" i refer you to the "The Little Prince" book especially his visit to asteroids 325 and 326 each of which is
inhabited by an adult who is foolish in his own way:

325 The King who can "control" the stars by ordering them to do what they would anyway. He then relates this to human subjects; it is the
citizen's duty to obey, but only if the king's demands are reasonable. He orders the Prince to leave as his ambassador.

326 The Conceited Man who wants to be admired by everyone, but lives alone on his planet. He cannot hear anything that is not a compliment.

I care as much as per my Hobby as you but not as much as you care about your membership and volunteers ideas!

A i wrote "NAMASTE and EAGLE project are from my point of view literally dead! For those who are still believing on a HEO made by AMSAT-NA
forget it they "HALTED" NAMASTE and fired out the EAGLE team leaders" i agree with you there is nothing sinister when you wrote

" At this time, all group leaders on the Eagle project are relieved of their leadership duties."

Read the book...

P.S. You should have wrote "AMSAT members will be getting more detailed information through the Journal

and the engineering mailing lists in the coming years and decade". Your move will only change the time line...

Costs certainly are on the increase again after a period of stagnation but £20K per Kilo to LEO seems to be above market rates. Of course, CUBESATS lug along a P-POD launcher which probably adds a significant cost burden and is effectively just dead weight.

As to Ariane5, I had a look for costs and some sources quote US $120M per launch. With 6 metric tons of payload, that does indeed equate to US $3,000,000 to fly a 150Kgs payload to GTO at cost price.

It makes no sense to me that cost quotes to LEO and GTO should be the same at $20K/Kilo.

Re the Intelsat idea, I'll leave that one to someone else to check out. I'm not interested.... not even slightly.

Another variation on the same subject.

At supper time the host dog was barking the host look at the dog in the eyes and say "one time" the dog stop barking but he resume his
session few minutes later. The host look at the dog in the eyes and say "two time" the dog stop barking but again he start barking again
patiently the host look at the dog in the eyes and say "three time" the dog stopped barking but he restart his barking session again. The
host pull out a gun and he shoot the dog!

His wife at the table called him a monster, crying - why do you kill a defenceless dog!

The host turned toward her looking her in the eyes and say "one time"!

Hello all

Is there a mix from Euro, US$ and GB? ? Anyway, I have googled 2 intersting
sites.

About launch costs of a CubeSat:
http://www.pumpkininc.com/ubb/Forum10/HTML/000013.html
"In general, launch costs are around $40,000-$50,000 per U (i.e. per kg)."

About launch costs into a GTO orbit:
http://www.sciencedirect.com/science?_ob=ArticleURL&_udi=B6V1N-4B1RG8C-1Y&_user=10&_rdoc=1
&_fmt=&_orig=search&_sort=d&view=c&_acct=C000050221&_version=1&_urlVersion=0&_userid=10&md
5=5291b70046898fb6cb6344eaad66949a
"36 000 $/kg in 2002"

This is highly inofficial, but gives an idea of launch costs. You can
google much more sites.

We have to be carefull here about comparing the costs of launching a commercial 1000 kilo communications satellite into GEO transfer orbit against a small 1 Kilo Amateur package to LEO.

I'ts down to bulk buying - if you pay to launch a thousand kilo's it'll cost you substantially less per kilo than if you just pay to launch just one kilo. All the payloads that go into GEO are big.

> About launch costs of a CubeSat:

The $40,000 per kilo for a 650 km LEO orbit ties in with the figure I'd heard for current prices, however, I believe that Cubesats launched so far have paid closer to $20,000 a kilo.

Launching is an expensive business. When you consider that the number of Radio Amateurs world-wide active on the satellites is probably less than a thousand you can see the problems in raising such large sums of money from such a small user base.

This is why I believe we need to continue to explore the options of collabarative venues with other organisations be they Governmental, Educational or Private Venture such as The Mars Society http://www.marssociety.org/portal/groups/GermanyCH/archimedes-balloon-project

How i can repeat the same idea in a different way!

3 years ago i wrote "there is not enough money available in each AMSAT'S" i was speaking for an ONLY ONE international AMSAT to regroup
all the available funds" Running after too many rabbit will only bring empty hands.

As the one repeater in each ham backyard syndrome era we are now facing the same trend. The volunteer era is also no more THE SOLUTION our
club repeater group who was playing retuning rebuilding old commercial repeater on the ham bands and having to perform maintenance work on
a monthly basis became tired to play again and again on the same used machine our volunteers where exhausted. THE NEW SOLUTION we buy a
brand new motorola repeater (3000$ for a 40 members club) Two years now of peace and smooth operation our volunteers are now playing around
SDR radio and DSTAR.

GUIDE FOR AMATEUR HEO SATELLITE LAUNCH.

1-Put the world-wide resources towards one goal one HEO at a time
2-Planned the funding
A- How much money is needed for a launch
B-Divide the amount by all the possible contributors
C-Have al the AMSAT'S organizing their own funding in their own area.
3-If some money is missing we will all know why we cannot have a launch and this will end up the complaining
4-Working in closed circle under our national flags will only divided our resources if "Now that launches are commercial operations" we
will have to govern us accordingly GO COMMERCIAL SELL D'ONT BEG Try to have managers and administrators who are familiar with the business
world not those who rely on charity, or elitism fund raising club, or governmental grants.

5-When the business plan will be attached it is much more easy to seek out for major money contributor's.
6-Is this goes by having to put a Coke sign on the satellite body or having a CD with names of 5$ donors (look at the cube sats supporters)
7-Stopped attending hamfest and start to visit universities in promoting an HEO project how they can help?
8-Look for new countries who are now making their first steps in space India, China, Japan
9-The space shuttle is now at the end of his planned life is there any available space in their last flights to accommodate an HEO of

150KG!
10-If someone ask me if can managed to put 300 a year in a fund to have an HEO launch i think i will be able to save 82 cents per day per
year but they will have to SELL me the affair...a sound and a well attached project.
11- If it is possible to reach 6000 individuals 1.8 millions will be available per year and in no more than 3 years more than 5 millions
will be in this fund.

The killing question!

Is the actual leadership is able to drive such program i think not AND IT IS THE MAIN PROBLEM a huge structural change is needed as the
ideas of the base are not listen. Only the leaders ideas are promoted even if they are no more up to date as they are getting trailing
support by few foul mouth it is a vicious circle who fortunately start to break up...

AMSAT-NA is facing an obscure future. The last act of mutiny is only the tip of the iceberg even if the captain want's to play it down!
We are could be ugly but not stupid...

As someone wrote

"Only the leaders ideas are promoted even if they
are no more up to date as they are getting trailing
support by few foul mouth it is a vicious circle who fortunately start to break
up..."

The diseases is spreading...GM is collapsing towards a possible bankruptcy. Budweiser is now owned by a belguim company. Fannie Mae and
Freddie Mac are lurking with bankruptcy too. Some post on AMSAT-BB are a possible explanation about the root of the disease. When a dog
feel he's attacked when he's in a dead end with no escape possible he bites. His animal survival instinct often make's him appears having
rabies.

Fun too see how close human's reactions are from the animal world.

Fortunately here some help about the first symptoms

The first symptoms are usually non-specific, flu-like symptoms - fever, tiredness, headache that may last for a few days. In the acute
stage, which quickly follows, an individual exhibits anxiety, confusion, insomnia, agitation, hallucinations and hyperactivity (furious
rabies) or paralysis (dumb rabies). The acute period usually ends after 2 to 10 days. In both furious and dumb rabies, a complete paralysis
develops, followed by coma. Death occurs during the first 7 days of illness without intensive care.

Please note in our case study:

Our individual also exhibits sign of anxiety, confusion, agitation and hallucinations!

As read on another post " I am 80 years old and know that ignoring them is the best way to treat them, but sometimes they just go too far."

But how to ignore an attacking dog?

My answer is ALWAYS SMILE :)

And here is a short story to ease your tension and blood pressure.

Bush, Putin and Chretien are in hell and they ask the devil if they can called their own country. The devil say yes and he show them the
red phone.

Chretien called first at the end of the call he hang the phone and he asked the devil "how much for the call?" The devil say 2 millions.
Chretien was furious and he ask why? the devil say you are in hell here and it is a long distance call.

Putin want's to call home too the devil shout go ahead! At the end of the call he also ask "How much" 2 millions the devil said. It is a
long distance also for me? the devil say YES.

Bush also called home and he asked also how much, the devil say 2$ Bush ask why it is so low the devil say it is a local call for you!

P.S. There is no connection between any individual and any animal species in the above text if you misinterpreted the text please don't
bite me...

Well Thomas i see what you mean and i think the Cubesats fenomena is like a sickness. Because is involved education, i think that we can't stop this process so a solution is a cooperation with ,,pumpkin campus" for mounting ham transporders and make atractive for them HEO's.

Hello Florian, group

This would be very difficult or impossible. CubeSats are big business now and have its own philosophy. HEO's are too expensive as you know yet. The only way is the cooperation between us HAMs and the students at the universities. But also this is difficult while each university "cooks her own soup". The great exception is the Uni from Delft (NL) with her DelfiC3/DO-64. An exception was also the cooperation between AMSAT-UK and SSETI with eXpress-OSCAR-53. See http://www.amsat.org/amsat-new/satellites/sat_summary/SSETI.php

Only a joint way will us serve a future with satellites for our hobby. Or a multi millionaire who finance us a HEO with launch. ;-)

What if the LEO's become very popular? Maybe the EU commission would finance a few university HEO's and we (hams) could negotiate transponders and beacons in return for use of Ham bands and software?

To be honest the only way I think we'll get a HEO is to join in with a EU education program.

Well Simon, CUBESAT LEO's already *are* popular.... popular with the education community, that is.

As a platform to carry linear transponders, they are a non-starter.
The reason can be summed up in two words. Power budget.
A Triple Cubesat like Delfi-C3 is better but thats cheating really.
Three CUBESATS bolted end-to-end ... well thats a cheat surely!

An 8 inch 'Cubesat' in LEO would be a different proposition altogether for linear operation. A 'big Cubesat' if you will.

I don't think that AMSAT has anything to gain from getting too 'chummy' with the education sector. Just my personal view. I just can't see any real benefits.

This is a nice dream Dear Simon. They have their own Galileo project.
The Cubesat LEOs are popular yet and no university would change from
LEO to HEO. There is no need for their experiments I think.

But we can go the other way. AMSAT builds a tripple Cubesat with an
arcjet truster like in AO-40 and fires it into a HEO-orbit. I don't
know, if this is technically possible. But so you can save much money
for the launch. An other question will be the transponders, antennas,
battery and computer in such a Cubesat.

Thats what I said with a "joint way". Its unimportant whether with EU
(government), industry, universities or eventually AMSAT-Worldwide.

On this way, our AMSAT-DL president Peter, DB2OS, makes a great job since
many years. But if the Amis (Sorry) means, they must have their own
satellites... this brings us away from a HEO in orbit.

Hi Simon & Group

it's a nice dream, yes indeed. However, I think that it's impossible a
HEO-Cubesat
to support Full-Duplex communication on a Monliya orbit. Keep in mind, the
AO-40
had 500 W ERP on S-Band Downlink ! (50 TX + 10 dBic Helix antenna).

Definitely the power budget is too small on a HEO-Cube in order to be able
to support
even the 10% of this power for S-Band.

For lower Bands -where the "Path Loss" is significant lower, except the
limited
Power-budget probably it's another problem the small Cubesat body.
There is not enough surface for Hi-gain VHF & UHF antennas.

(or - that is a great challenge for "designers" !)

1738. AMSAT-UK Colloquium - UK MoonLITE Mission

Yahoo group: eu-amsat
Date: 2008-07-16 22:42:36 UTC
From: Trevor
Topic: 1738 Message: 1738

Dr Rob Gowen will give the keynote speech "Science Penetrators for the UK MoonLITE mission" at the AMSAT-UK Colloquium.

The 23rd AMSAT-UK International Space Colloquium will be held at the University of Surrey, Guildford, England from Friday 25th until Sunday 27th July.

Dr Rob Gowen, Department of Space & Climate Physics (Mullard Space Science Laboratory, University College London and Coordinator of the UK Lunar Penetrator Consortium) will give the keynote speech on "Science Penetrators for the UK MoonLITE mission".

MoonLITE will be the first ever UK lunar mission. The presentation by Dr Rob Gowen takes place at 2:30 pm on Friday 25th July in the University of Surrey Management Building lecture theatre.

The Colloquium is open to all Radio Amateurs and SWL's. Either day passes or full packages comprising overnight accommodation and meals are available. An online booking service is available with PayPal, Visa and Master Card payments accepted.

For further details see http://www.uk.amsat.org/Colloquium/

1740. AMSAT-UK Colloquium - Just 3 Day Left To Book

Yahoo group: eu-amsat
Date: 2008-07-18 07:17:49 UTC
From: Trevor
Topic: 1740 Message: 1740

There are just 3 days left to place a booking for the AMSAT-UK International Space Colloquium.

The 23rd AMSAT-UK International Space Colloquium will be held at the University of Surrey, Guildford, England from Friday 25th until Sunday 27th July.

Dr Rob Gowen, Department of Space & Climate Physics (Mullard Space Science Laboratory, University College London and Coordinator of the UK Lunar Penetrator Consortium) will give the keynote speech on "Science Penetrators for the UK MoonLITE mission".

There will be presentations from AMSAT-DL on both the eagerly awaited P3E satellite and the pioneering Mars Orbiter P5A. This will be the first private venture spacecraft to travel to the Red Planet providing Radio Amateurs with some true DX signals.

The Delfi-C3 team will be giving presentations on their exiting new satellite. Its SSB/CW 435/145 linear transponder will activated soon and is sure to prove popular with satellite enthusiasts world-wide.

The Colloquium is open to all. Either day passes or full packages comprising overnight accommodation and meals are available. An online booking service is available with PayPal, Visa and Master Card payments accepted.

For further details see http://www.uk.amsat.org/Colloquium/

A site map showing location of the Management Building and the adjacent main car park and conference visitors parking can be seen at

1743. AMSAT-UK Colloquium to be Webcast by BATC

Yahoo group: eu-amsat
Date: 2008-07-20 09:20:27 UTC
From: Trevor
Topic: 1743 Message: 1743

Thanks to the British Amateur Television Club (BATC) this years AMSAT-UK International Space Colloquium will be streamed live to the web.

Peter Blakeborough G3PYB, President of BATC, will be streaming video of the presentations live to the Internet so that Radio Amateurs and SWL's can watch them from anywhere in the world. This service will be available at http://www.batc.tv/

As well as the live webcast BATC will also be providing a Live Chat web page enabling viewers to post messages.

The 23rd AMSAT-UK International Space Colloquium will be held at the University of Surrey, Guildford, England from Friday 25th until Sunday 27th July.

Prof Sir Martin Sweeting, G3YJO Chairman AMSAT-UK, will open the Colloquium at 14:00 BST (13:00 GMT) on the Friday.

This will be followed by the keynote speech given by Dr Rob Gowen, Department of Space & Climate Physics (Mullard Space Science Laboratory, University College London and Coordinator of the UK Lunar Penetrator Consortium) on "Science Penetrators for the UK MoonLITE mission".

The Colloquium is open to all. New for 2008, it has been arranged with the University for "walkin" day delegates for £10 per day. For this, you do not get any meals, only attendance at lectures/beginners sessions. It does not entitle you to any other of the functions. There is no need to book, just turn up on the day. It would help if you could let us know in advance if you intend using this facility, please email g3wgm@...

1744. Delfi-C3 (DO-64) 435-145 MHz Linear Transponder

Yahoo group: eu-amsat
Date: 2008-07-24 07:58:04 UTC
From: Trevor
Topic: 1744 Message: 1744

On Saturday at 9:05 am (0805 GMT) the Delfi-C3 team will be giving presentations on their exciting new satellite at the AMSAT-UK Colloquium being held at the University of Surrey, Guildford, England July 25-27th. The event is open to all.

The SSB/CW Linear transponder should be activated very soon.

Thanks to the BATC the presentations will be streamed live via the Internet to a worldwide audience. This free service can be viewed at http://www.batc.tv/

Later that day at 11:30 am (1030 GMT) there will be two presentations from AMSAT-DL. These will be on the eagerly awaited P3E High Earth Orbiting satellite and the pioneering Mars Orbiter P5A. This will be the first private venture spacecraft to travel to the Red Planet providing Radio Amateurs with some true DX signals to receive.

From: SV1BSX
Topic: 1744 Message: 1745

Hi Trevor,

thanks for updating and defininitely I would like to be there, however is..
difficult !

Please - If that is possible, can you ask the Delfi-C3 team about the
duration of this Satellite?
As we have read it's just 1 year.

I think is not very "clear" this point, if they talking about the Linear
transponder or the whole
Satellite's systems (including TLM), so it should be nice if the Delfi-C3
team exlpains that
during -or after- the presentation.
Because the Satellite working without batteries, this short operational
period sounds
unusual.

Thanks in advance

73, Mak SV1BSX

1746. Re: [eu-amsat] Delfi-C3 (DO-64) 435-145 MHz Linear Transponder

Yahoo group: eu-amsat
Date: 2008-07-24 11:57:21 UTC
From: Trevor
Topic: 1744 Message: 1746

I'll certainly ask Wouter and let you know his answer.

Here are my thoughts on the lifetime:

When any satellite is built an "operational lifetime" is always quoted.

In some cases it may be as short as a few months because that is all that is needed to acheive the key scientific or other aim of the project but it doesn't mean the satellite will cease functioning after that time.

My understanding is that Delfi-C3 could last for many years. I believe the limiting factors will be solar cell degradation and the orbit height - it will probably burn up in the atmosphere after 20 or so years.

The beacon on UOSAT-Oscar-11 launched in 1984 was still semi-operational until recently, 23 years was good going.

The transponder on Delfi-C3 is very low power, I think only about 250 milliwatts PEP output, so signals on 2 metres are going to be a lot weaker than we may have been used to in the past.

1747. Russia to launch Soyuz-ST from Caribbean in 2009

Yahoo group: eu-amsat
Date: 2008-07-24 17:23:57 UTC
From: Trevor
Topic: 1747 Message: 1747

Soyuz-ST should be launched from the new Russian Caribbean launch pad at Kourou in the first half of 2009.

The European Space Agency (ESA) already operates from Kourou. The new Russian Federation launch pad is near the village of Sinnamari about 10 kilometers north of the site used by ESA for the Ariane-5.

The Kourou launch site is intended mainly for the launch of geostationary satellites. Its close proximity to the equator will enable the Soyuz-ST to put into orbit heavier satellites than from Baikonur in Kazakhstan and Plesetsk in northern Russia.

1748. How do you do packet on the sats?

Yahoo group: eu-amsat
Date: 2008-07-24 20:11:59 UTC
From: m5mkw
Topic: 1748 Message: 1748

All the books I have looked at only shows what you need to do packet on the sats.
Is there anywhere what actually tell you what to do and what commands you need to type etc.
I have done APRS to the ISS but with the pacsats I have not a clue.

TIA Mark

Hello Mark

You have nothing to type, all you need is the program WISP. See
http://www.amsat.org/amsat-new/tools/software.php#digital

Hi,

I agree with Trevor's comments. There is no real reason why Delfi-C3
could not be operated for a VERY long time in orbit. With no battery
to fail or degrade, the limiting factor for the mission is most likely
to be degradation of the solar arrays by radiation.

Given that AO7 is in a more harsh radiation environment than Delfi-C3
is in, and the solar arrays still provide some power to it's
transponders after well over 30 years, it's possible that extended
operation of Delfi-C3 could indeed take place.

It would be a major loss if the controllers of Delfi-C3 were to kill
off the mission prematurely. An extended mission for Delfi-C3 would
also allow the probable lifetimes for other components such as the PIC
CPU and FM430 OBC to be evaluated.

1751. Delfi-C3 Tranponder now activated over Europe

Yahoo group: eu-amsat
Date: 2008-07-25 19:54:37 UTC
From: Trevor
Topic: 1751 Message: 1751

Delfi-C3 Tranponder now activated over Europe

The Delfi-C3 435 to 145 MHz SSB/CW transponponder has now been activated..

It will be switched on duing this weekend whenever it is within range of Europe and will automatically switch back to science (telemetry) mode when it goes into eclipse about 1 hour later.

This means that only those within range of the European passes will be able to use it.

The Delfi-C3 team will be giving presentations on their exciting new satellite during the AMSAT-UK Colloquium taking place at the University of Surrey, home of the Surrey Space Centre.

The presentations start at 09:05 am (0805GMT) on Saturday July 26th and will will be streamed live to the web to a worldwide audience at http://www.batc.tv/

For more info see

From: SV1BSX
Topic: 1754 Message: 1754

Hello all,

after Robert-G8ATE's report on Amsat-BB, this evening I tried together with my friend Dimitris, SW1JGW, a test on FO-29.

Well, yes indeed, the Satellite is active again ! Just after the AOS we heard clear the Beacon, and then I had a nice QSO with SW1JGW (21:36Z) ! After that I changed my frequency a bit lower and I had a 2nd QSO with DL6HP (21:38 Z).

Both, Dimitris and I, we were QRP ! 5 Watts for Uplink were enough for excellent return signals on Downlink. By using QRP we tried to avoid any overloading of the bird.

The Satellite was really Booming, always 55 - 59 with "crystal audio".
However, at 21:38 my return-signal rapidly decreased, but even much lower it was easily readable.
After that I interrupted my TX and I return onto Beacon frequency. Q5 now, but still "clear" !

Later I noticed that on my tracking software, precisely at this time the Satellite came on a new Eclipse !
So, probably the old-Batteries are not strong enough in order to support the same Downlink-power
in eclipse, like that on Sunlight. Also I observed some FMing at this point and I lost the signal before the LOS, but on this direction I have not "clear horizon" (but High buildings),
so I can't say with accuracy if the Satellite was still "ON" or not. Sorry !

Anyway, the FO-29 is back again ! Great news !

CU on FO-29 !

From: SV1BSX
Topic: 1755 Message: 1755

Hello again,

Just a few minutes ago FO-29 was in my range for 2nd time this night (orbit #58964) and it was
active again, strong and healthy !
I heard it clear from 5 degr @ 23:18 Z, over Scandinavia. At 22:23Z came on a new Eclipse again... however it's obvious that, as I observed very carefully this time, the Satellite has
not any problem also into Eclipse! I did not notice any decreasing of Downlink power this time, nothing at all. I sent several times CQ on CW and SSB, too. No problem !
Always BOOOMing ! Loud & Clear signal !

I lost the signal at 23:29 (5 degr). It is absolutely normal from my location that.

After my 2nd observation, it's obvious that (my opinion) now the batteries can maintain the Satellite "ON",
even if goes through Eclipses. I don't know how is possible to re-born old-batteries on Space, however...
Congratulations to JARL for that ! Well done !

My compliments Gentlemen... I vail . -

Hello Mak & group,

I listened the FO-29 pass around 1320UTC today, CW beacon was very strong and I was able to hear my own signal down to 0,5 degrees (max. elevation was about 2 degrees) with 10-20 watts from the rig to a 5-el linear polarized yagi. Let's hope that FO-29 continues to work like this also in the future!

From: Luc Leblanc
Topic: 1759 Message: 1759

I called on 3 passes today on FO-29 but no one shows up. Signal was very stable and clean but i suspect the TX was running at QRP level i
only got a S2 reading with the INT preamp on on the FT-847!

Anyway it's another one the be anchored on to avoid driftingachonred out of the channel.
DELFI C-3 will be the next one.

From: Trevor
Topic: 1744 Message: 1760

Mak,

I spoke to Wouter. Hopefully Delfi-C3 will last many years but of course a failure of a critical component could reduce that just as with any other satellite.

We already have Cubesats that have been operating in orbit for 5 years now and I seen no reason why Delfi-C3 shouldn't exceed that.

The microprocessor is one component that could fail due to radiation damage. The good news is that even if it does fail the design should permit Delfi-C3 to keep operating. So I'm looking forward to many years of operation.

The power level is lower that the 250 mw I mentioned in my last post.

It turns out the transponder is running about 150 milliwatts PEP output rather than the 400 mw figure quoted on the Delfi web site. The transponder Beacon is running 30 mw.

The 70 cm receiver has a noise figure of 6 or 7 dB, this may at first sight seem high but is intentional. It's because it is designed to handle Pave Paws and other radars which operate in 70cm. It is unfortunate that Radio Amateurs do not have any Primary spectrum at UHF.

It appears the innovate antenna deployment mechanism they use may also work at 50 MHz. We do not have an Amateur Satellite allocation in this band but AMSAT-UK and the RSGB among others are trying in the long term to get an ITU Satellite allocation from 50-51 MHz. This would be very useful for Cubesat linear transponders since the path losses are significantly lower, a major consideration for Cubesat Transponder operation. Efforts are also being made to get a small IARU Satellite allocation at the bottom end of 2 metres. If we eventually do get 50 MHz allocation we could see 50-144 linear transponders on cubestats.

1762. AO-7: out of eclipse?

Yahoo group: eu-amsat
Date: 2008-08-07 15:16:58 UTC
From: SV1BSX
Topic: 1762 Message: 1762

Hi all,

as I read on AO-7's Online LogBook, today the Satellite "switched" on Mode-A after a long time.
Looking for eclipse-periods, according to NOVA today @ 12:25 UTC it was the
last Eclipse for the current season! The next one will be on 12th of May, 2009 .

However, according to Emily's Log that is not true, the end of eclipses take place at October 2008.

http://www.planetemily.com/ao7/Eclipse.php

I wondering... Is it NOVA "true" or Emily's Log ?

Hello Mak

I think your calculation with Nova is correct. In Emily's calculation
a long time error takes effect.

I will be QRV again in Mode-A on Saturday if the timer works normally.

AMSAT-UK Video's on BATC Site

Videos of the presentations given at this years AMSAT-UK Colloquium are now available on the BATC video site.

To access the videos go to http://www.batc.tv/ and click on the 'Archive' button on the left.

Select which AMSAT-UK lecture you wish to watch then click the 'Play' (>) icon.

Click on the icon between the 'Progress' bar and the 'Volume' bar to get full screen viewing.

Lectures 4 and 5 are about the MoonLITE project which will be the first Lunar mission by the United Kingdom.

Lectures 6, 7 and 8 are about the Delfi-C3 satellite

Lecture 9 is the P3-E satellite presentation given by AMSAT-DL President Peter Guelzow DB2OS, see also "Get into Orbit with AMSAT-DL's P3E-Satellite" at http://www.p3e-satellite.org/index.pl?lang=en_EN

Lecture 10 will be the Amateur Radio Mars Orbiter P5-A given by Achim Vollhardt DH2VA, see also "GO-Mars with AMSAT-DL's P5A Mission" at http://ticket-to-mars.org/index.pl?lang=en_EN

Lecture 11 will be the Delfi-n3Xt next generation satellite presentation

The full lecture programme can be seen at http://www.uk.amsat.org/content/view/640/213/

AMSAT-UK publish a newletter OSCAR News which is full of Amateur Satellite information. Join online at https://secure.amsat.org.uk/subscription/

1765. AMSAT UK P3E Lecture Available

Yahoo group: eu-amsat
Date: 2008-08-07 22:52:35 UTC
From: Keith
Topic: 1765 Message: 1765

Please excuse if this has been posted already, as I have been away and have not been keeping close tabs on the reflector lately.

The P3E Lecture that was given at the AMSAT-UK Colloquium by Peter DB2OS is available for viewing on the British Amateur Television Club web site.

http://www.batc.tv/

It's located under the Film Archive Channel and is listed as AMSAT-UK Lecture 9 from the drop down menu.

The other presentation are also available except I couldn't find the P5A lecture. Possibility it hasn't been processed yet ?

Enjoy... Keith N4ZQ

Very nice presentations. One attract my attention was made by Peter Guelzow DB2OS one one of his slide we can read:

ATTRACTIVENESS OF AMATEUR RADIO HAS DROPPED SIGNIFICANTLY

FUNDING A SATELLITE FROM AMATEUR RESSOURCES ALONE NEVER WORKED BEFORE AND WILL NOT WORK NOW.

I don't how to explain how all the wisdom and reality knowledge seems to be concentrated in Europe when speaking about amateur satellite?
Could be we are too stupid here and we swallow anything "the official" says but with the figures given 3.5$ millions can be reached in 3
years by 6000 supporters at a contribution rate of 200$ per year.

I know figures was given in pounds but it is achievable if one day or another the AMSAT'S regroup under an unique satellite funding
structures any goals will be achievable. It's true that "FUNDING A SATELLITE FROM AMATEUR RESSOURCES ALONE NEVER WORKED BEFORE" but the
context never evolved the same AMSAT'S pattern remain as if it was the only one TRUE solution...It's not.

OPINION POLL AND SURVEYS

I start one "unscientific" couple years ago AMSAT-NA make one more scientific...too and the last one show up the very same results the
amateur community want's by a very strong margin HEO'S. The cube sat concept is already very well served by all the cube sats group. It
will be logical NOW that the NON CUBE amsat's refocused their goals on HEO'S.

It should be their primary goals not making cube sats as they are cheaper to construct and launch but making or financially/technically
supporting the most viable actual HEO'S project eg: P3E.

Again after a small period of darkness someone light up the candle at the end of the tunnel and the tunnel is under the Atlantic with the
exit at +- 4000 KM from here.

Still hope when there is still life!

From: Luc Leblanc
Topic: 1769 Message: 1769

First experience with do-61 (DELFI C-3) this morning here.

1-No body was on the satellite only me calling CQ
2-From AOS to TCA signal was very good about +-3 DB above noise level
3-At TCA signal dropped below noise level too week for SSB but week for CW
4-From TCA to LOS signal remain below noise level and became too weak even for CW

I suspect the satellite antenna configuration show some directivity or it is the satellite attitude who seems to favour some part of the
orbit pass? I was never able to received my SSB dowlink on the eastern pass only a week CW carrier one time. There is some audio AGC as
increasing the audio level make's not a big change on the dowlink. I was able to uplink with the FT-847 RF gain control completely turned
off (about 1 or 2 watts).

I don't know if my results are in line with what the team planned but when the sat was on data mode i was able to copy it from AOS to LOS
but i think the TX power is reduced in transponder mode?

It make's another one to experiment with and a preamp is imperative to be able to work it with ease. Just have to get some folk's on it
here to be able to check it again.

If i read you correctly you mean no more bells and whistles only a +- plain transponder?
But if i remember correctly it seems some of the
builders does not found the challenge up to their ambitions!

The new vector now is the human factor and it seems as hard to deal with than the funding issues!

Remain my Paris Hilton solution and i was wrong she's 27 but still blonde and cute with a lot of cash. The age factor is further reducing
our funding chances here not speaking for myself naturally and my english is too bad anyway...

Trivia question:

What was the average attendance age at the last AMSAT-UK symposium conferences?

Your answer will let you know how soon the next HEO is desirable!

1774. Fw: [amsat-bb] AMSAT HEO design evolution (longish)

Yahoo group: eu-amsat
Date: 2008-08-11 19:13:07 UTC
From: SV1BSX
Topic: 1774 Message: 1774

Hi all

I found extremely interesting the following Email by G0MRF.
For non-readers of Amsat-BB, I forwarded here.

73, Mak SV1BSX

----- Original Message -----
From: <G0MRF@...>
To: <m5aka@...>; <amsat-bb@amsat.org>
Sent: Monday, August 11, 2008 8:00 PM
Subject: [amsat-bb] AMSAT HEO design evolution (longish)

Given the understandable negative content of the posts recently regarding the AMSAT HEO satellite debate, perhaps it's time to return to basics and ask some fundamental questions about the way we design satellites and fund their launch.

The problem: AMSAT High Earth Orbiting satellites have historically had a mass between 150kg for P3 and 650kg+ for AO-40 and at 30,000 Euros per kg, we do not have the resources to self finance the launch costs of 4.5 million (30k x 150) to 15 million Euros to launch.
However, AO-40 was probably a 1-off and will never be repeated. So let's say 4 - 5 million.

The way forward?
1) Raising the funds for the standard launch cost of the typical AMSAT HEO is beyond us. So other external funding solutions are needed either by providing a service which is paid for. - An example of exploring this route is the AMSAT NA proposed Advanced Communications Project via Intelsat.
A second approach, is to include commercial payloads within the AMSAT spacecraft, or perhaps including AMSAT 'functionality' within other commercially or educationally funded spacecraft. Again, there are examples of this approach for LEOs. Delfi C3 is one success story. Also, and had it worked for more than a few orbits the ESA Education department / SSETI Express XO-53 was another. But at HEO the opportunites are very rare indeed, the only project currently being persued is the ESA ESEO educational mission with AMSAT UK providing a U/S transponder as part of a redundant communications system for the spacecraft.
As we have been reminded in the past few days, self funding never worked before and it wont work in the future. I feel some sympathy for the AMSAT NA board who have an apparently impossible task to fulfil, but their enthusiasm to elicit support has let expectations exceed funding ability. - The response ha s been vocal. But at least they are trying.
Finally on the funding issue, what have we done in the last 8 years? We've had the Eagle fund. We've had the successful AO-51 fund raising campaign, but

really, since the launch of AO-40 in November 2000 we haven't saved for this 'HEO' eventuality. If we are ever going to replace spacecraft in the future, fund raising needs to be more sustained and less impulse led. We have little to show for the last 8 years.

2) There is however another option which may be self financing. A fundamental spacecraft redesign to reduce the mass to a figure we can afford to launch. Over the last 25 years, the mass of a P3 spacecraft has remained fairly constant. About 90kg of structure and payload with an additional 60kg of bi-propellent fuel. There are probably ways of trimming this back substantially. In LEO sat design we have seen a reduction in size from 400kg to the SSTL microsat of about 120kg in the 1980's. These days the SSTL 'microsat' has evolved down to 3 - 5kg. with projects like the NASA Nanosail design. But no such revolution has taken place in HEO satellites
So, a few possibilities. You can probably think of more.....

a) The 60kg of fuel has been needed to raise perigee and increase inclination from a typical geostationary transfer orbit. But there have been orbital change manoeuvres that have not gone to plan e.g. AO-10 and AO-40, but those satellites have still given us usable communications. Do we need all 60kg? How about raising the perigee to give a long life and a slight increase in inclination to get us out of the GTO belt around from around 7 degrees to 15 degrees? I wonder what the saving is there, 400 Newton motor down to 50 Newton motor. Fuel from 60kg down to 15kg? Saving = 45 + 5kg = 1.5 million Euros? OK the figures are guesswork, but there must be savings.

b) Spacecraft design. During our time with P3 spacecraft, we have seen transponder power change dramatically. I recall the first few days of AO-40 when I heard the 2m beacon stronger than many local FM stations. But then it used a 300 Watt BLF278 type device and was designed to give a huge signal. Equally, I also recall receiving a worked all continents satellite award for QSOs I made on the experimental AO-13 mode S transponder. That was 1 Watt (max) into a 5 turn helix on 2400. So, in the future, do we need 45 or 50 Watts of power in a 100kHz wide transponder? After all, if there are fewer amateurs, we can use less bandwidth saving power and mass in the process. 8 Watts and 50kHz? A consequence of such a design change would require a groundstation with more than a patch antenna to pick up the signal. But is that unreasonable, dishes are cheaper than launches.

c) Two final thoughts. Firstly, isn't the world moving away from metal structures to carbon and ceramic composites. Mass saving perhaps. Secondly, I don't think AMSAT with it's limited resources can afford to put spacecraft into orbit that will fail the moment the batteries die. Let's not dwell on the excellent Delfi example, but instead look at the Intelsat spacecraft. Is it not the case that they have a 10 year lifespan which is limited by stationkeeping fuel? While they operate 24/7 the power comes from the solar cells. The batteries are used only in eclipse. With our P3 designs, as I understand them, the spacecraft can not function on solar cells alone. Unfortunately, the advantage of our chosen HEO orbits also mean that the batteries on a P3 satellite go through a couple of eclipses a day. As battery life is proportional (or worse) to depth of discharge of the batteries, it's not surprising that most

AMSAT spacecraft suffer battery failure. But with limited funds we really need to design in a mode so that 5 years on, the batteries can be switched out of circuit and a sensible geometry of solar panels can continue to provide some daylight only functionality.

Conclusion:
Funding campaigns need to run over several years within a rolling plan to supply launch funding.
Designs need to evolve to include new technologies. Mass reduction = lower launch cost should be near the top of the list.
With fewer amateurs, and modern digital modes we need less bandwidth.
It is not unreasonable for an AMSAT member to need a moderate size of antenna to work an HEO. So, lower power in space.
Lifespan needs to be increased and with HEO that means battery failure should be anticipated and mitigated in the design. A daylight operating spacecraft is better than no spacecraft at all.

Thanks.....a quiet day here!

David

Could we do HEO within a 50kg budget? = 1.5million Euros spread over a 10 year lifespan?

Thank's Wouter for your comments.

The change in signal strength appears at TCA exactly at west and it was a southbound pass. I guess the antenna main lobe was directed at me
and when the satelllite passed my TCA point the main lobe was not directed at me.

Half the pass was very good and the other extremely weak i'm using a 14 elem cross yagi stuck in right hand polarisation i know a 3DB
difference due to polarisation change on a yagi but much more when using the wrong polarisation. This old KLM 2M 14C suffer numerous
winters 2 crash down and the relay and the relay board where broken up to a point of no repair the only one solution is to make two
separate antenna. I someone used to modified on of theses old beam it will be interesting to know what the impedance is at the end of the 2
4 to 1 balun? It will be nice if it will be 52ohms! But i guess it is 100 ohms as the 2 balun line are tied to a SO-239 connector.?

The audio quality is nearly as good as FO-29 by the way nice sat to experiment with.

Hi Kostas,

I'll check WispDDE myself, if my code crashes I'll fix it ASAP. I've never used WispDDE :-)

I have a few things to do with the Satellite Tracking code this week:

* Better manual tuning support,
* Transverter support,
* NTP client,
* More rotators.

I've fixed a few minor buggy-wuggies.

1792. Solar cycle 24

Yahoo group: eu-amsat
Date: 2008-08-25 02:23:06 UTC
From: Luc Leblanc
Topic: 1792 Message: 1792

Excerpt fron ARRL letter

Wondering when Cycle 24 will begin

It seems like we've been at solar minimum forever. In fact, there have been several news releases hinting that this solar minimum period between Cycle 23 and 24 is unusual.

The analysis of recent spotless days compared to historical spotless days (see science.nasa.gov/headlines/y2008/11jul_solarcycleupdate.htm) led Dr. David Hathaway (NASA solar physicist) to conclude that nothing is unusual about this solar minimum period. Another way to look at solar minimum is to look at the duration when the smoothed sunspot number is below 20. Historically this duration has ranged from a short 17 months to a long 96 months, with an average of 37 months. Cycle 23 descended below 20 in February 2006, and Cycle 24 is predicted to ascend above 20 in early 2009. That's around 36 months, so everything appears to be pretty normal so far and agrees with Dr. Hathaway's conclusion. We'll just have to be patient until Cycle 24 starts ramping up. The good news is that we have seen three sunspot regions tied to Cycle 24 (January 4, April 13, and May 5), so it's coming.

Subject: IARU representation in European Union

Point of view concerning effective representation of radio amateurs all over the world,

In the XXI century the IARU needs to modernize their rules and Constitution and the old resolution 93-3.

Noting:

1. The constitutional obligation of all IARU member Societies is represent adequately the interests of radio amateurs throughout their country and autonomous or separate territory.

2. Is an imperative for the XXI century, the modernization of this concept of «national society» and change to other Constitution of national federations or national confederations, to include all the national, regional and local associations, NGO, leagues, groups, gangs or clubs.

3. That in some democratic countries, like in European Union, the National Constitution of each state assumes the non-obligation to participate in associative movements and the freedom of choice to affiliate in any national, regional or local association. In freedom countries there are radio amateurs who are members of other national associations and non-governmental and non-lucrative organizations that works for education and development of science and technology trough the Amateur Service and Amateur Satellite Service, with other goals non-sportive like the DX and contests on short-wave bands.

4. Because in European Union and other freedom countries there are radio amateurs who are members of other organizations, in general, the present IARU «national societies» represents only a minority between 10 to 35% of all this national amateur radio cultural movements actives in each country.

5. IARU in Region 1 is to be missing representation and financial resources since 1980.

6. IARU in the future to promote and defend all the interests of radio amateurs throughout the world at international telecommunications conferences it is necessary for the IARU to speak on behalf of all worldwide radio amateurs, needs change the Constitution, to include non the old concept of «national society» but the new national federations or confederations, democratic representatives of large associative national movements of amateur radios.

7. Because is very important to the future of education and development, of culture of science and technological trough the Amateur Radio and Amateur Satellite Service have in all the World a common voice speaking on behalf of radio amateurs to each administration.

Conclusions:

Since the old IARU resolution number 93 from 1993 (at 15 years ago) in European Union and all over the world, the «national societies» of IARU not draw the attention of the regional and local organizations to the fact that for member Societies to meet their constitutional obligations (and rights) they should pass to such other national organizations and entities all the adequate information and duty of participation as to the actions of the IARU, and encourage such of this national and local organizations to respond to them in respect of worldwide Amateur Radio and IARU matters, for this motive of exclusion, imposed by the «national societies» all the regional and local associations to come short from the IARU, not contribute in equal duty and obligations to the development of the Amateur Radio and Amateur Satellite Service.

IARU needs are integrated inside the others national, regional and local organizations to take such action in respect thereof as is appropriate and an important step for the freedom and democracy.

A point of view, by AMRAD (AMSAT-CT)

1801. DO-64 OFF?

Yahoo group: eu-amsat
Date: 2008-08-27 08:38:13 UTC
From: SV1BSX
Topic: 1801 Message: 1801

Hi all,

Today morning 27/8/2008 @08.00Z,
I tried DO-64 (orbit #1793) but nothing heard through the transponder.
(I am not talking about the Beacon, I did not try to listen it.)

Is it the transponder OFF?

1802. Re:DO-64 OFF?

Yahoo group: eu-amsat
Date: 2008-08-27 23:54:43 UTC
From: Keith O'Brien
Topic: 1801 Message: 1802

Mak, DO-64 was OK on the Wednesday 14:30 UTC 27 August east coast North America pass. It seemed a bit weaker this time around, but the transponder was active.

Same thing over here especially for some CW station who crank up their power until they hear their own downlink and they start to call CQ
using the same power level.

THE CASCADING EFFECT

Those using just enough power have to increased their power too until the pass band became unusable. Even with the lowest power setting on
some rig the EIRP is still too high. A way compensate they should stay off pointing in elevation this will help reducing their signal at
the satellite.

It is not an easy concept but the using "just enough power" as stated in many radio act and regulations take his full sense on satellite
operation. It his hard to condemn when the operator is at his first qso's but when "veteran" are involved it is a bit hard to understand
their motive? (Just remember the chirpy CW signal on HF in the past some station get tag as the always chirpy one!)

Just to pointed that on AO-7 on August 28 i was able to have a QSO with F2IL Jean-Marie the satellite is in the best shape since a long
time no more heavy distorted audio. I was trying the double sat FO-29/AO-7 idea but with not too much success. It is hard here as per my
simulation to have both satellite in range but european pass offer many pass where both sat are in range over the same area.

Who will be the first! we have the labour day week end here to try this concept.

Topic: 1807 Message: 1808

Hi Simon,

personally, I don't like it. I never use the Radar plot and I can't see what is the profit to use it that
as a radio amateur operator. May be it's useful in order to view a satellite on sky, when is "visible".

I am always using the 3D Earth view, which is a very realisitc picture of our planet, that NOVA
& HRD including. Especially for LEOs is excellent as is focused over a specific area, and not all over
the world like the rectagular map.

However, if you want my personal comment, I am using NOVA for several years, and really-really hard
I will change it with some other software. For example, a reason to keep NOVA and not to change it with
HRD it's the great ability of NOVA where you can "see and track" several satellites
on the same screen. You don't need to change nothing by using the Mouse or keyboard.
Just you are looking on the screen, and you can monitor in real-time 1, 2, 3.... 10 (or more) Satellites !
That's great because you have a really complete sense of view, you know easily what happens over your QTH
and how many Satellites are "in range" or close enough.
So, it would be much appreciated if a future version of HRD includes this ability (and not the Radar !) ,

"Just my 2 cents worth".

Hi Mak,
I fully endorse your comments re: NOVA. In my opinion it's the best tracking program I've ever used ... and I've used all the available ones, military and commercial, in the last 40 years.

Still ... in the end, it all comes down to personal preference of course.

Despite the old adage ... what's good for the goose isn't 'always' good for the gander.

One "oddity" is that the Americans seem to prefer a well known German tracking program - while the Europeans generally go for NOVA, an American program ... magnet parameter ?? ... opposites attract ??.

BTW ... NOVA's radar plot *IS* correct ... as are the eclipse prediction and sky noise features ... the latter very useful when HEO operating.

If one should wish a "flat" map ... that is available too ... but like your say, the best feature IMHO is the "local" equidistrial map for HEO's.

I even managed to cajole GM1SXX into admitting that it was ... "OK" ... (!!!).

Hi Simon,
Used properly, it 'shows' the direction of the satellite oin it's rbit with reference to your QTH ... ie, the curved line ... where it rises and where it sets ... very useful for the operators using hand held "Arrow" aerials to envisage where to 'point'.

The 'circles' also denote the elevation.

If people use it correctly, it's an elegant facility.

Hope that helps.

Hi Simon

Its is quite unique to have a ham software tailor made live with nearly each individual operators suggestion. I try few months ago the CAT
doppler correction for my Yaesu FT-847. Even if the software support this type of transceiver my model one of the first available suffer a
small problem as you already aware. The CAT system works only one way EG: software can send command but he cannot read anything from the
transceiver.

The last time i try the interface the software cannot open as he was unable to find the Yaesu. The only one program i was able to control
"my" 847 was the FT-847 super control made by DH1NGP. I don.t know if it is something hard to correct but it will be nice for those who
used the early serial number version of the FT-847.

Thank's for all the work perform Simon

Hi Luc,

Try the latest beta
http://www.ham-radio-deluxe.com/Downloads/BetaKits/tabid/99/Default.aspx

I have a FT-847 here, I'll make sure it works OK.

Hi Nader !

I was QRV on CW, I heard also a few stations from Italy and SW1JGW & SW1EIX
were
also QRV on SSB.
However, FO-29 has a plenty of bandwidth (100KHz). We are usually +/-
435.860 (and
not 435.850, at Middle PB).

The next pass is very late for my QTH and also for Europe. I hope to hear
you tomorrow.

Thank Mak for info
Yes I was a little rusty and just testing my setup here, this why I stick to one frequency and I did not scan the whole bandwidth to see what was going on!! I was so happy to heard my downlink with 5 watts all the pass ;-) i was on 435.855 +/-.not like what i posted on the cluster. I will try to scan next time to catch more stations

Also I hope to catch some station from South Africa via fo-29
may someone on this list relay this message to any ham there
for skid .

so see you soon my friend Mak

From: SV1BSX
Topic: 1828 Message: 1829

Hi Simon,
the most units for S-Band reception among radio amateurs are the well known MMDS (Multichannel multipoint distribution service) - Down Converters (D/C), where convert the 2.4 GHz down to VHF. These units are made mostly as a wireless telecomunications technology, used for general-purpose broadband networking or, more commonly, as an alternative method of Cable TV programming reception, so the output is somewhere inside of Cable TV VHF Television Band.
Thus, if you have an unmodified MMDS D/C, the "DownConverting" of 2401 MHz is usually somewhere around to 122 - 126 MHz. Several radio amateurs have replaced the Local Oscillator XTAL into DownConverters with a new one, in order to have the output into 144-146 MHz (2 m Band). In addition, these units need re-alignment of "Front-end" in order to peaking the sensitivity into S-band (+/- 2401 MHz for Amateur Satellites).

There are also a few commercial "plug & play" DownConvertes in market place, which are made especially for AO-40 reception with default output into 144-146. Some other models on VHF & UHF as well. But they are very expensive -vs- to MMDS DownConvertes.
However either MMDS or Commercial units NEVER offer an output directly to 28 MHz.

Personally, during the good-old-days of AO-40, I had made a second homebrew DownConverter (145 -> 29 MHz) in order to convert the output of my MMDS D/C down to 28 MHz Band.

http://sv1bsx.50webs.com/2m_converter/2m_conv.html

Thus, I was using my TS-850 for AO-40 reception, just because similar HF have much more capabilities and they are superior receivers for the majority of VHF-UHF All-mode. But in any case, you need a hard work and enough experimentation in order to make workable a similar system, with "double down converters" from 2.401 GHz to 29 MHz.

Hope this hepls

1830. AO-51 L/S MODE

Yahoo group: eu-amsat
Date: 2008-09-08 15:25:34 UTC
From: Luc Leblanc
Topic: 1830 Message: 1830

Using the same S band converter that i was using with AO-40 i succeed to have some QSO on AO-51 VE2NPC and another station but i am not
100% sure of his callsign.

First i think Squidly Diddly will be the type of operator best equipped to handle my station in L/S mode on a LEO sat. I am using my PCR-
1000 to have a graphical display of my up converter output on the scope display. Since my first attempt on L/S mode i found very hard to be
on the right uplink frequency. This morning pass i heard Clare VE3NPC transmitting a couple of time to find the right uplink frequency on
my side even adjusting as per the Orbitron doppler corrected uplink i was always out of the satellite L band receiver until i start to
adjust my TX frequency lower and higher than the program displayed frequency. I ended up with a 15KC higher than the "supposed" doppler
corrected frequency on Orbitron?

Could be my upconverter is not properly aligned or the scope display on the PCR-1000 software is not too exact at 1.268GHZ?

At the end i will have to set the satellite RX frequency 15KC up to be able to get in the RX pass band.

Next step is to have my uplink frequency controlled by my PC as i need 2 additional arm here in the shack!

Bottom line L/S is feasable and with some tweeking it can probably matched the V/S mode +- the obstacles and foliage blocking in the path.

I had no difficulties to make QSO's with my IC-1271E and doppler correction
via "mic-click" on L/U over AO-51 on its 1268.700 uplink-QRG. With L/S I had
no luck to receive a signal. I have double-checked my S-rig and all
should be
technically OK. I presume I have also an unwanted offset in my downlink QRG.
The last satellite with S-downlink which I received successfully was UO-11.
It's very difficult to find a solution with a LEO-sat and its doppler. I'm
waiting also for P3E :-)

From: Simon Brown (KNS)
Topic: 1832 Message: 1832

I finally got a diplexer set up for 70cms and now no longer have the 70cms RX overloaded by the 2m TX. I had a QSO with myself on VO-52 and it's great to be able to hear my own signal (others may disagree). So a very big thank-you to those who pointed me in the right direction.

Now to get support for the AlfaSPID's over travel - it supports azimuth values from -180 degrees to +540 degrees.

Hello Simon

Is your Diplexer between antenna and preamp or between preamp and TRX ?
I have mine between antenna and preamp like on this website
http://www.amsat.org/amsat-new/articles/Mode-J/ . But the 2m port is
terminated and grounded.

Yes. Its a little dummyload in a PL-259 connector. To terminate and ground
the port was a hint from an experienced HAM, HB9ADP.

Hi Simon,

this setup by putting the Duplexer between Antenna & PreAmp it is not the best one.
I know this method from AMSAT pages, however several months ago took place
a discussion on Amsat-BB about that. And I completely agree with the
oblection by a lot of HAMs about this unusual setup.

The correct method in order to prevent the UHF-desense on Mode-J is by
using a LOW-Pass filter in the *Output of VHF TX* and NOT by using a Hi-Pass filter
in the *Input of UHF RX* !

The main disadvantage by using a Hi-Pass filter between UHF-antenna and
UHF receiver is that, the overall LOSS (Filter+Plugs+Coax-cables) increases
unexpectedly the NF (Noise Figure) of your receiving system. That is unwanted.

Especially in case where you have a Low Noise Antenna mast Pre-amp, the
LOSS of filter in dB is added to NF of the overall receiving system. Thus, if your Pre-amp
has a NF = 0.5 dB and your Duplexer is connected between PreAmp-input & antenna,
this way a Loss of about +1 dB (or more !) is added to your Pre-amp and thus it has been
lost the
good value of NF = 0.5 db !

Now it has the "bad" value of NF = 1.5 dB ! (0.5 + 1 = 1.5 db NF)

In other words, your system is dropped down from the expensive "GasFet-class" (NF< 1 dB)
to conventional-class (NF >1.5 dB) system.

Therefore, you have lost the main advantage of your *very expensive* Low-NF Pre-amp !!!

Conclusively, this method with Duplexer as Hi-Pass filter works but it is not the best one.
It's 100% compromise (and at my oppinion a very-very bad compromise in case you have a
Low Noise PreAmp.).
And yes, you need to terminate the VHF-port of Duplexer with a 50 Ohms Dummy.

Hi Mak,

I agree with the logic, but for me 1 dB is nothing. When we get a HEO then it'll be very different :-)

There's a great pass of VO-52 at 20:05 UTC and I'll be on SSB somewhere - maybe you'll keep an ear open for me.

....OK Simon, I will try to be there! Another good opportunity is through FO-29 tonight. This period FO-29 is on apogee at similar descending pass, so it will be "in range" between 21:26 - 21:46 UTC (from my location).

20 mins is great time for several QSOs via FO-29 !

Nader from Sudan, he is also active on similar passes ! You have the chance to manage an excellent and very *rare* QSO via Satellite with ST-Land !

Hi Mak,

I agree with the logic, but for me 1 dB is nothing. When we get a HEO then it'll be very different :-)

There's a great pass of VO-52 at 20:05 UTC and I'll be on SSB somewhere - maybe you'll keep an ear open for me.

this setup by putting the Duplexer between Antenna & PreAmp it is not the best one.
I know this method from AMSAT pages, however several months ago took place
a discussion on Amsat-BB about that. And I completely agree with the
oblection by a lot of HAMs about this unusual setup.

Hi Simon,

I heard you, nice signal on VO-52 ! And a lot of stations looking for a QSO with you !

Unfortunatelly I found you just before the QSO with Genadi, ES3RF, and at that time the Satellite
was very "Low" for me and close to my LOS. So it was very difficult to have access into the Satellite
with a lot of traffic.

OK, no problem, maybe some other time.

Have a nice evening.

Hello Simon and Mak

With this duplexer (or diplexer ?) configuration as described before
and 14turn helix, a SSB preamp before, I was QRV via AO-10 and AO-13.
I don't know, if an 2m low pass filter has the same effect. Any real
experience ?

Hi all

Is full doppler correction usual on FO-29 ? I was a few times QRV with only uplink doppler correction for a stable downlink QRG. I mean, this is usual for LEO sats and much easier to handle a QSO. Otherwise you swish over the passband and disturb other QSO's. Or you have always to correct both frequencies. Dimitrios has made a good video example of this.

Hi,

By 'Full Doppler' I mean 'Correct Doppler' - so when in TX I adjust the TX
and when in RX I adjust the RX :-)

Sadly many users of VO-52 / FO-29 seem to not use any Doppler correction :-(

Not quite VE3NPC,KD8CAO,WB8OTH,KC9ELU, and myself are there too when they are able to find the right uplink on L... But if i can succeed to
have the uplink controlled by a PC L/S will be a greath mode +- path obstruction (Just hope they will put the sat in this mode again this
winter)

BTW I don't know the extent of L/S mode operation in europe and in the rest of the world?

The Bitch is back ... LA2QAA on AO-7 that is - (thanks for the mail Joe) - but there wasn't much activity on the 54813 orbit over Frei Island ... just one clown on SSB with *WAY* !!! too much power knocking the transponder silly ... still it "is" Saturday so the "clobberers" are to be expected at the weekend - I do wish they'd read the operating instructions though.

I suppose it was a case of not even knowing he was responible. Strange that they don't realise the tansponder only wobbles when they transmit ... and you *CAN'T* expect such operators to understand the term FULL DUPLEX - mostly, they use rusty 6 inch nails for receive aerials - wit about 100w to a 10 element beam on transmit.

From: Luc Leblanc
Topic: 1864 Message: 1864

I just ending a near complete pass QSO with Michael KC9ELU on L/S. This western pass was much better than the east one?. Always manually
tracking the uplink i found a way to control the doppler on the downlink using the AFC button on the PCR-1000 that i used to received the
output of the AIDC downconverter on 123mhz. There is no need to have a PC tracking program just tune the downlink and let the AFC doing the
job!! It works and if you loose the downlink for few minutes the AFC is quite agile and he will retune by himself right on the center of
the downlink. You can always fine tune the frequency manually. The scope feature is also usefull if you drift too far away from the
downlink you can see where the signal is without tuning up and down.

I don't know if this will work for other type of receiver but the FT-847 does not have this feature?

Hi all,

well I am very glad for this QSO and I would like to say CONGRATULATIONS
to Jose CU3EQ & Nader ST2NH (....in alphabetical order !)

I heard personally the QSO and I confirm it. It was 100% complete.
And for the history, the distance between HM68KP & KK65GP according to
TinyLOC is 6306 Km !!! It could be without problem into AO-7 DX-List !!!

I can't say if that is the "Top" record for FO-29 or not, I have not records,
however sounds to me very good indeed. As the FO-29 is lower than AO-7,
I think this QSO is excellent. Definitely one of the best via FO-29.

Well done my friends ! Congratulations to both of you !

73, Mak SV1BSX

Hi John,

Thanks - I noticed it was AWOL this morning when checking the U/V transverter. I'm only on U/V at the moment from my home. I didn't hear the CW beacon on 70cms - I like beacons :-)

Yesterday I managed to hear myself once I used the correct TX frequency (old eyes, ageing brain etc.).

Yes, the U/V transponder is operational (depending on eclipse or not) every 2md day.

Subject: 24 hour timer.
Date: Sun, 14 Sep 2008 12:37:32 +0200

Hello Simon,
Much depends on the 24 hour timer, which, doesn't "always" work in conjunction with the eclipse period ... (I don't post this on the group page because it would confuse the 'L' out of most people).

After lengthy e-mail exchanges with Jan King - (AO-7 project manager) - and my own testing a couple of years ago, I came to the (correct) conclusion that some of the information in the 1976 Amsat newsletter regarding AO-7 is in fact incorrect.

Since about 1984 some of the electronics are 'fried' and even though certain of the sun panels "do" generate enough energy to operate the transponder in sunlight the actual relays *DON'T* always switch as they're supposed to ... so even though it often "appears" that the 24 hour timer is working correctly ... it is *NOT* always the case.

From: John Hackett
Topic: 1873 Message: 1873

Has anybody else noticed ?? ...

We seem to be "begging" various universities - please may we use our own exclusive amateur radio frequencies - (2m band) - just like Commander John Brannegan G3IHJ warned us we might be doing ... in 1995 ... and GM1SXX & LA2QAA reiterated in 2000, 2001, 2002, 2003, 2004, 2005 and 2006.

How long before we get chased off completely !! ... with the statement ... "GERROFF!!!, this is a university frequency".

As William Shakespeare would undoubtedly have stated ...

"Alas, me'thinks it far !! too late to stop ye olde rot now".

Just a thought.

NB.

Yessssssssss ... we know about the money issues ... and all the other issues ... P3D was !!! too optimistic and had we *NOT* put all our eggs in one basket we might not be in the situation we are today ... but what good does "I told you so" do, after the fact ??.

(I said: *might* not be).

Hello Simon

The 70cm beacon of AO-7 is silent. If AO-7 flies thru eclipses, then only
the B-transponder is on and you can hear the 2m beacon. Now there are no
eclipses and you can work Mode-A today and B tomorrow. But in the
non-eclipse
season the 2m-beacon switches off.

Topic: 1874 Message: 1877

Hello Luc,
Thanks for the updates ... yes !!, I obviously missed a lot while I was in hospital. Wow !!, those clown *WERE* getting optimistic wern't they.

I started to smell a rat several months ago when I, by accident, came across the information that the EMERGENCY transponder was planned so that it could *ONLY* be activated by certain people ... (Ohhhh *VERY* smart, for an "emergency" transponder). ... that was the time I decided Amsat really was !! degenerating into a private club for the chosen few.

Decocracy indeed !! - (I don't think)

I havn't mentioned this publicly - (though a few of my froends know) - I first started getting suspicious a couple of years ago when a past President e-mailed me with the words ...

"I havn't actually operated via a satellite but I'm a good adminstrator" ....

That, plus the fact that not just one prominent member of the b.o.d. voted with his feet - (walked away) - due to disagreement of the future policies - (direction) Amsat was to move in.

Personally, I think I'll be dead and gone - (currently 62 and ill health) - BEFORE an HEO takes to the skies. I also believe P3D
will also remain "on the ground" due to lack of funding for a launch.

The only ray of hope I see was provided by my partner-in-crime GM1SXX who has discovered there will be room for possible launch with the Russians from Korou with their latest project.

Have a look at our website at ...

<http://www.observations.biz/Joint_Observations/Observations_2008_09_11.htm>

At least there's a "glimmer" of hope there if Amsat are wise enough to persue it.

Remember ... you saw it on 'OBSERVATIONS' firstm though no doubt they will try to take credit for it like they did with VO-52 by giving it an Oscar number 'AFTER* the registered keeper of the satellite had died.

VO-52 was nothing at all !!! to do with Amsat.

Joint Observations
2008_09_11
GM1SXX & LA2QAA
Soyuz from Kourou
Arianespace and the Russians are busy
building a new Soyuz launch-pad.... at Kourou in French Guiana. The
construction of this launch pad will allow Arianespace, and probably also
Starsem, the marketing company for Soyuz , to launch Soyuz rockets
from a near-equatorial spaceport. Soyuz is an extremely reliable launcher
and has been around in various guises since 1957. The Soyuz craft launched
from Kourou will have an updated digital guidance system to provide even better
injection accuracy and will use tropicalised components to cope with the hot and
humid conditions encountered there. The enlarged 'ST' type launch shroud
will allow bulky payloads to be handled and we've also discovered that a new
version of the ASAP adaptor is being manufactured to fit the Soyuz launcher.
This has the designation 'ASAP-S'. It's similar in concept to the system
used to launch the AMSAT Microsats in the past and can accomodate four 200Kg
mass satellites on the outer ring with a single 400Kg payload in the central
chamber.
The new ST launch shroud for Soyuz is
4.11metres in diameter and 11.4 metres long.
With Soyuz being able to fly out of Kourou
(in addition to Plesetsk and Baikonur) plus the availability of the FREGAT upper
stage, this allows a number of different orbit type to be available to planners.

Fregat is an autonomous re-startable upper stage that can handle Medium-Earth
orbit, Sun-Synchronous orbit, Geostationary Transfer Orbit, and Earth Escape
trajectories, in short, it's an extremely versatile upper stage.
Who knows? Perhaps David (G0MRF) Bowman's suggestion of MEOSAT amateur
radio birds *could* become a reality using SOYUZ.
With ESA advertising for astronauts, one
must wonder where they will fly from and on which vehicle. They could certainly
fly to the ISS from Baikonur on a Soyuz, but with the US shuttle about to be
scrapped in the near future, they are unlikely to train for a flight on that
vehicle. One other possibility of course might be manned launches
from Kourou. Kourou is close to the Equator, so flights to the ISS would
require a fuel- guzzling 'dog-leg' manoeuver to reach the inclination of the ISS,
but the Europeans already *have* a large unmanned vehicle that could be
outfitted as a small space station (the ATV), and they also have a launcher
capable of lifting it into LEO so one wonders if that could become a part of
their manned programme.
While the Americans are actively working on
ARES, A.K.A. 'the
stick' launcher for manned spaceflight, the Europeans *could* use Russian built
Soyuz rockets carrying the Soyuz manned spacecraft from Kourou. This would be

far cheaper than designing, building and 'man-rating' a launch system of
their own. It's easier to launch to the ISS from Baikonur than from Kourou
but who knows what will happen when the Shuttle retires.
The following items already appear in
the Arianespace order book for Soyuz..

7 dedicated Soyuz launches
(two from Baikonur, six from the Guiana Space Center).
In our book,
two plus six equals eight, but maybe Arianespace use a 'different'
accounting system :-)
The future
looks interesting.

73 AL & John.

Hi- Tom Frey posted this response to Simon's question. "The 70cm beacon of AO-7 is silent. If AO-7 flies thru eclipses, then only the B-transponder is on and you can hear the 2m beacon. Now there are no eclipses and you can work Mode-A today and B tomorrow. But in the non-eclipse season the 2m-beacon switches off".

Can you explain how I can identify an eclipse and how you can tell when AO-7 flies thru eclipses, I need a little mentoring on the subject of eclipses and how they effect satellites from A to B modes, thank you.

73,
Pete, WB2OQQ

Pete,
As you probably know, AO-7's power is solar - the batteries are kaput. Things only work when the satellite is in sunlight, ie - non-eclipse.

Have a look here ...

<http://www.planetemily.com/ao7/ao7log.php>

Now click on AO-7 STATISTICS ... then AO-7 ELOIPSE CHARTS
and you will see the predicted times of eclipses.

The tracking program NOVA predicts eclipses textually.

If you don't have NOVA, and memory serves me well, the free ORBCOM program on Nova's website - (Northern Lights Sostware) - also has this feature.

Hope that helps.

I think you and me should run for the next Pope position and as an Italian you have a meter in advance of me... EG: you are closer to the
Vatican. But i don't know if you consider yourself from the south or the north last time i was in Italy that's seems to matter some folk's.
(South of Menton area a juicy fruit region!) Here is what i wrote to Gerry

I added also a newspaper article at the time of the world was guessing who will be the next Pope:) Feel free to distribute it at will it's
in french but easy to translate.

It can help others too just hope this trend will came back on AMSAT-BB?

Ok just to be on the safe side when you will troubelshoot the rotor i assume you have a close circuit between wire 4-5, 5-6 and 4-6 i refer to
the wire position on the back lug terminal on the control box. To test theses wire
you should dismantle them from the box terminal. As i
can see your motor winding seems not to be open and that's a good news.

Now without connecting wire to terminal 4-5-6 check voltage on the control box
between terminal 4 and 6 with the power switch on and one of
the rotor direction switch depress you should read about 28 volts AC. Check after
voltage between terminal 5 and 6 depressing the other
direction switch here also you should read about 28 volts AC.

Just remember when you check the rotor at the shack level the wired tested should be disconnected from the control box. Bear in mind also
that it is possible that one of terminal 4 or 5 test open if the rotor was at his
maximum course limit. The limit switch can be activated.

My guess if all the tested you perform are correct your main step down transformer
can be fine as you have light when you switch the rotor
on, This pilot light take his power from the same transformer winding. The motor
circuit is the most easy part of your rotor electrical
wiring if the motor does not move something is open from the shack level up to the
rotor. Again make sure you follow al the procedures i
wrote and let me know your results.

Thank's

> I forget to mention to check for the motor terminal wiring at the control
> box just disconnect the wire behind the box and check if both
> motor coil are not open. that's the first step. On mine one coil test open
> meaning i have to find another rotor. Just hope it's not that as
> it is the worse scenario all the other problem can usually be repair.

P.S. I was the one who install this rotor up side down with some catastrophic results in winter here

Atention!!!
In the IARU rules accepted and certified by ITU the radioamateurs frequencies are not free. They can be used only by radioamateurs not by others. Using this frequencies by others is ilegal, the free (but paing taxes) are CB bands.

Hello Florian

Do you mean, if universities uses our frequencies with their cubesats,
this is illegal ? Can you post us a link to such a document from IARU
or ITU ?

But all japanese cubesats have a regular callsign. Hmmm...

Thomas,
You make a very good and valid point - about the Japanese Cubesats having 'callsigns'. At least this shows they take the rule about "amateur" frequencies seriously.

It would be interesting if someone followed up this thread.

Good one !! Thomas.

The rest is just "waffle" ...

Of course, it's far too late now to do anything about it, we lost that battle years ago ... Mummy (Amsat) knows best ... they seem to be of the opinion we *SHOULD* a-begging go ... I posted the original mail to see if there actually were !! others that didn't agree with the official "party" policy ... not that it would matter because Amsat have already shown they do *NOT* cater to the general concensus of the membership.

A case in point being Richard Limbeare's referendum some while ago where - if I recall correctly, the Amsat-UK vote was 70+ percent *against* the official party line (read: Amsat-NA's B.O.D) ... but they went with the 25+ percent anyway!.

Good solid democracy.

Anyone not adhering to the official party line gets drummed out quick sharpish ... (ask Luc) ... which is precisely !! why Mak and I started this group.

Nobody is asked to agree with any views put forward but that they *can* be put forward without criticism, flaming or derogatory comments is the whole object of the exercise.

All we ask is that there is gentlemanly conduct at all times.

The sheer amount of input in the last 4 years shows this reflector is a success.

(Told !!!! you Mak, he-he-he).

Hi John,

I think it was in either July 2006 or July 2007 that the AMSAT-DL President Peter DB2OS said at the AMSAT-UK Colloquium that the Russian launchpad at Kourou was one of the options they were investigating.

The main drawback to one of the early Russian launches from Kourou is the higher risk factor. The Russian Federation has never launched from a Tropical site. The climatic conditions are dramatically different from Baikonur and will present problems they haven't so far had to deal with.

Remember also that P3E is closely tied into P5A. AMSAT-DL needs to secure a Dual-Launch package for both spacecraft, ideally late 2009/early 2010 for P3E and 2011 for P5A.

Joint Observations
2008_09_11
GM1SXX & LA2QAA

Soyuz from Kourou

Arianespace and the Russians are busy
building a new Soyuz launch-pad.. .. at Kourou in French Guiana. The
construction of this launch pad will allow Arianespace, and probably also
Starsem, the marketing company for Soyuz , to launch Soyuz rockets
from a near-equatorial spaceport. Soyuz is an extremely reliable launcher
and has been around in various guises since 1957. The Soyuz craft launched
from Kourou will have an updated digital guidance system to provide even better
injection accuracy and will use tropicalised components to cope with the hot and
humid conditions encountered there. The enlarged 'ST' type launch shroud
will allow bulky payloads to be handled and we've also discovered that a new
version of the ASAP adaptor is being manufactured to fit the Soyuz launcher.
This has the designation 'ASAP-S'. It's similar in concept to the system
used to launch the AMSAT Microsats in the past and can accomodate four 200Kg
mass satellites on the outer ring with a single 400Kg payload in the central
chamber.

The new ST launch shroud for Soyuz is
4.11metres in diameter and 11.4 metres long.
With Soyuz being able to fly out of Kourou

(in addition to Plesetsk and Baikonur) plus the availability of the FREGAT upper stage, this allows a number of different orbit type to be available to planners.

Fregat is an autonomous re-startable upper stage that can handle Medium-Earth orbit, Sun-Synchronous orbit, Geostationary Transfer Orbit, and Earth Escape trajectories, in short, it's an extremely versatile upper stage.
Who knows? Perhaps David (G0MRF) Bowman's suggestion of MEOSAT amateur radio birds *could* become a reality using SOYUZ.

With ESA advertising for astronauts, one must wonder where they will fly from and on which vehicle. They could certainly fly to the ISS from Baikonur on a Soyuz, but with the US shuttle about to be scrapped in the near future, they are unlikely to train for a flight on that vehicle. One other possibility of course might be manned launches from Kourou. Kourou is close to the Equator, so flights to the ISS would require a fuel- guzzling 'dog-leg' manoeuver to reach the inclination of the ISS, but the Europeans already *have* a large unmanned vehicle that could be outfitted as a small space station (the ATV), and they also have a launcher capable of lifting it into LEO so one wonders if that could become a part of their manned programme.

While the Americans are actively working on ARES, A.K.A. 'the stick' launcher for manned spaceflight, the Europeans *could* use Russian built Soyuz rockets carrying the Soyuz manned spacecraft from Kourou. This would be far cheaper than designing, building and 'man-rating' a launch system of their own. It's easier to launch to the ISS from Baikonur than from Kourou but who knows what will happen when the Shuttle retires.

The following items already appear in the Arianespace order book for Soyuz..

7 dedicated Soyuz launches (two from Baikonur, six from the Guiana Space Center).
In our book, two plus six equals eight, but maybe Arianespace use a 'different' accounting system :-)

The future looks interesting.

>
Can't see a problem myself. As I pointed out in my article, Soyuz
vehicles for launch from Kourou will be tropicalised. Soyuz also
spends a minimum of time outdoors on the pad.

Baikonur is a desert area, both blisteringly hot and bitterly cold
weather but of course is far less humid than Kourou, but the vehicles
will receive special treatment to cope with the conditions there.
At least they won't have to cope with sub-zero temperatures and
icing, just humidity and insulation-eating bugs :-)

ASAP-S will also be available for Soyuz launches from Kourou along
with an enlarged launch shroud. Perhaps David Bowman's MEO proposal
would be practical from Kourou on Soyuz/ASAP-S.

IMHO the days of large amateur satellites are over. We should be
concentrating on smaller simpler birds, and in my opinion at least,
amateur satellites should carry amateur transponders, unlike the vast
majority of University birds, which serve no useful purpose whatsoever
to the majority of radio amateurs. Just my 0.2Cents worth.

I have no problem helping out universities with experiments - some of today's students could be the people who effect the launch of the next generation of MEO's and HEO's. We're helping with education and maybe we could stick an oar in and get the odd CW beacon or two running as well?

My only criteria is that the data sent by university satellites should be fully documented.

My last post was of course "tongue-in-cheek" but seriously ...

Anyone
using the 2m band should at the very least provide something in their
"package" that is useful to the average radio amateur ... *NOT* just
the dedicated "expert" and/or associated specialised equipment like
magnetic flux detectors or similar "experiments".

Even a simple CW beacon would suffice as "useful".

CW and other narrowband satellite signals are no doubt interesting to demonstrate Doppler shift and for testing but it's a hellishly wasteful thing to spend membership money on unless the bird carries something else of use to the satellite enthusiast. That 'something else' usually happens to be a transponder for most paying members.

>A 1.2GHz / 2.4GHz CW beacons would be very handy...
Handy for what exactly?
Doppler on a 1.2/2.4Ghz LEO would be ferocious.

Perhaps you might also want to include a PSK transponder on such a bird, just for a giggle, or a bit of 'interest'? After all, it worked like a lead balloon before.

I agree - CW beacons are excellent for demonstrating /
testing Doppler correction. Myself I use LO-19 for this.

A 1.2GHz / 2.4GHz CW beacons would be very
handy...

Exactly - handy for testing software development and for those of us who
live far away from UHF / SHF people it's a chance to test receivers.

I'm currently tracking 70cms CW very well. Although I have no 23 / 13 cms
kit at the moment I would start getting something sorted out were there
reliable beacons.

FWIW I'm updating my RX frequency 8 to 10 times per second and with LO-19 on
437.125 MHz the tone stays constant all the way.

Maybe Cube sats could be encouraged to use 13 / 23 cms?

Hi Simon,

I believe 1.3Ghz is uplink (ground to space) only. 2.4G's can of course be used for space to ground links.
There are plenty of satellite signals to choose for doppler demos, especially outside the amateur satellite segments. Whats more, since Doppler shift increases with frequency, the amateur satellite band segments are probably not the best places to find such signals if you are actually serious about demonstrating Doppler shift.

my two pennysworth re: doppler.

After the demise of DOVE I've never managed to find a *RELIABLE* "live" source for 2.4Ghz signals so I agree with Simon on that one.

I believe he is capable of implimenting software that could and would track a 2.4Ghz signal so such a beacon would be useful to "many" radio amateurs.

Hi Simon,

I think it's unlikely that you will see CUBESATS using 2.4GHz down unless they use short data bursts. I doubt if the Cubesat format with only a few (a very few) watts of power could support a CW 2.4Ghz beacon although I *could* be wrong. Semiconductor devices for 2.4Ghz tend to be rather inefficient so power consumption/budget would almost certainly be an issue.

The reason why I'm so against the proliferation of University CUBESATs in the valuable 2M and 70Cms bands is that of course Doppler shift is far more manageable in those bands than on 2.4G's and not everyone has (or wants) automatic Doppler correction, especially those living in developing countries. The 2m and 70Cms segments are arguably our most valuable assets for communication, and they are being taken over by the Universities. As to Doppler, some of us like chasing the Doppler, by hand. Others simply can't afford anything else.

But unfortunately we don't have any satellite allocation for 1.2 GHz beacons, only uplinks are permitted. Lets hope the paper calling for an uplink/downlink Amateur Satellite allocation at 1240-1250 MHz (clear of Galileo) gets a sympathetic response at the IARU-R1 Cavtat meeting in November.

But if you tune by hand what do you do with a linear transponder when
transmitting, crash into people?

Computers which can run satellite software are dirt cheap and very often
free. IMO there's no excuse for not using Doppler correction when
transmitting unless your radio doesn't support this (FT-8x7 for example).

Well no, it's not usually a problem for those with more than a few
active braincells. I've even heard that some people use fixed
elevation antenna systems and rotate them by hand ... while also
manually tracking the doppler, communicating and keeping a log.

I can assure you that if you like a challenge, it's a lot of fun.
It's not for everyone of course, some people are 'appliance operators'
and so would welcome autotracking. Horses for courses etc.

Many people don't live in rich countries, and for them, amateur radio
alone is a big luxury' let alone auto-tracking and computers. Should
we all just dismiss them because they are poor and can't afford an
IC-910X and a PC to auto-tune it? I don't think so.

Gentlemen,
This thread is extreemly useful to the operators that have joined us in the last couple of years. Most of the posts are informative and teach the newcomer quite a bit ...
at the very least they probably incite "research" to find answers to various questions.

Well done !!! - it means the reflector is performing the duty it was designed for.

For what it's worth, I'm one of those who prefers manual tuning - though the program 'ITUNE' allows me to track with 'full doppler tuning' on my 22 year old 290/790 pair (neither of which has a CAT interface) - it's all done by mic push button control.

Automatic full doppler tuning is IMHO boring !!!! - though the (affluent) newcomer would probably not be without it.

The ITUNE software is pretty smart. It "knows" when the frequency changes and acts accordingly. I must admit though, it can only work with the now ancient DOS InstantTRACK program.

The point ? ... I have proved that even operators in developing countries or those like myself who havn't got two Roubles to rub together can still enjoy satellite operating.

For the newcomer - despite what you may have read elsewhere - a computer is *NOT* necessary to track a satellite.

I have a tracking program on my Nokia N70 mobile phone. (Everybody and his dog carries a mobile phone these days) ... yes, the program does !! tell you the doppler offset although some operators are like The Twisted Pair - (LA2QAA & GM1SXX) - whom tune "by ear".

I've never had a complaint yet about waltzing into someone else's QSO ... but then again, I *do* know what full duplex means and I *do* actually listen before I transmit and I *do* use a receive aerial that is more efficient than a rusty six inch nail.

If you hear on any transponder frequency when manually correcting your doppler a nearing signal you have only to move off a bit off this
signal. BUT on TCA i often loose my guy as i was unable to compensate. I discover it's better to adjust the uplink than the downlink as
both station can adjust their receiving apparatus better than the uplink when they manually adjust for doppler. That's why i never work AO-
40 at perigee as the S band downlink was moving too fast. BUT here we are with our "sputnik" sats and i succeed to partly making some QSO
on AO-51 last week in the L/S session even discovering that the AFC can effectively track the downlink doppler.

>Anyone not adhering to the official party line gets drummed out quick sharpish ...

>exercise.

>All we ask is that there is gentlemanly conduct at all times.

>The sheer amount of input in the last 4 years shows this reflector is a success.

As of now there is more activity here then there!!! and as Rich at the morgue who was burn to the bones one of his friend was unable to
identify the body and ask that we turned him over and he said "Ok now I can confirm it's him. The other Rich friend the day after ask also

that we turned over Rich body and he too confirm "Its really Rich" The doctor ask why both ask to turned the body and he answered when we
walked with Rich peoples always said "Hey it's Rich with his 2 ass holes"

Fortunately some of Rich friends are no more active on AMSAT-BB but i think some are still watching from their holes

Congratulations John and Mak for the "Ham spirit" and the freedom of speech support here on the internet.

I respectfully suggest this addition to the AMSAT-NA BOD bylaws. Could be the 919 voters representing less than the third of the total
AMSAT-NA membership will have a tool to be able to get rid of a fool eg: an Hitlerian actualized version of it... You know now why the
thermometer disappear from the AMSAT web page!

My suggestion:

No person shall be elected to the office of the President more than twice, and no person who has held the office of President, or acted as
President, for more than two years of a term to which some other person was elected President shall be elected to the office of the
President more than once. But this article shall not apply to any person holding the office of President when this article was proposed by
Luc Leblanc VE2DWE, and shall not prevent any person who may be holding the office of

President, or acting as President, during the term
within which this article becomes operative from holding the office of President or acting as President during the remainder of such term.

If this has been wrote on purpose who is this genius who never trust his own commetant?
He's probably fearing to be killed by the same
very one...

As usual it is my opinion and i know that you share it.

On a lighter note: http://www.youtube.com/watch?v=wKsoXHYICqU

Hi Florian,

yes is OFF and this in not unusual. The last years it happens when the eclipse-
period increasing. Under this condition the old batteries of AO-27 are not strong
enough to keep the satellite operational.
The last time where happened -I think at 2007- the satellite was OFF for a couple
of months.

73, Mak SV1BSX

1921. Question about rotor control SW

Yahoo group: eu-amsat
Date: 2008-09-19 18:59:11 UTC
From: Marco IK1ODO
Topic: 1913 Message: 1921

Hi all,

I have a question about rotor control. As far as I know, all tracking program/rotor drivers control the rotor motors in on/off mode. Please correct me if I'm wrong.
Many modern large rotors (M2, SPID, Prosistel...) have DC motors. Has anyone implemented a proportional speed control for them, able to vary the antenna speed and keep it continuously pointed at the satellite? That will avoid many mechanical stresses on the antenna/rotor combination, and possibly obtain better pointing for near-vertical passes. Specially at S-band, an high gain antenna may have such a narrow lobe to be off-pointed if the SW-rotor loop has a noticeable servo delay; and such delay is unavoidable in a start-stop control system.

73 - Marco IK1ODO / AI4YF

I have a SPID - you set the position and it goes there, it's a worm drive and very solid.

Some rotators do support variable speed - but OMG - the poor old software programmer will not be liking you :-)

Hello Simon,

>Some rotators do support variable speed - but OMG - the poor old software
>programmer will not be liking you :-)

That's the point. It would need a real,
proportional servo loop with position and velocity feedback.
I will have to steer a 3m dish at 2.4 GHz. 37 dB
gain, 3° lobe, and <2° pointing precision required.
Calculating the apparent angular speed of a LEO,
it will be off-pointed when the satellite is
overhead, due to the on/off servo loop delay. So my request.
Of course, the professionals have resolved the
problem a long time ago, but not with general
purpose tracking software, I presume. Who knows more?

What rotator are you considering? The SPID with 0.25' precision and a good 24v supply should track this correctly and quite quickly, only problem is precision / alignment.

You'll have to find a rotator with velocity feedback first, if you can do this then software could work out the rest.

So - do you have a rotator with velocity feedback?

Simon Brown, HB9DRV

Hi Marko,

I had a similar problem with an actuator. It was very fast and when the Software
gave command for about 1 degree, the actuator's movement was very fast
and the moving of antenna's bracket it was a bit more than 1 degree due to mechanical torpidity, so
the software was trying to correct the position by moving up-down up-down several times,
till the idling to the correct position between "feedback" and software position.

I solved this by using a timer and by feeding the motor with the half voltage during the
first 5 seconds of actuator's movement. The trick is that:

in the first 5 seconds the actutor is fed by the half voltage, so is moving slowly
and thus, easily and smoothly is going to the correct position. Thus, for small
differences in position (small movements) the actuator is moving slowly. But after the
first 5 secs, the timer commands the variable voltage supplier of actuator and thus
is moving with full voltage = full speed. Therefore, if you want a large movement, ie from 0 to 80 degr.
Elevation, the actuator is starting slowly and after 5 secs is moving fast in order to
cover fast enough the distance.

I don't know if something like that can be the solution for your problem. Just keep
in mind.

From my experience I have noticed that, the DC motors are very powerfull and they
have not problems with the 1/2 Voltage. Another combination is by using PWM circuit
for motor;s-feeding, you can this way to have almost full variable speed on DC motors
with hi-enough torgue.

Hope this helps

I will probably use a ProSisTel rotor. It has a worm drive like the
Spid, but a more robust construction. But I don't know how the
feedback is implemented, and what precision/positioning speed it has
- I will ask the manufacturer, then decide.
Well, more later... I know it is not a simple matter.

1929. yoyo effect while rotor control

Yahoo group: eu-amsat
Date: 2008-09-20 11:32:44 UTC
From: Thomas Frey
Topic: 1929 Message: 1929

Hello all

I followed your last discussion about rotor control with interest.
A similar problem is the yoyo effect. But this is not a hardware
problem but a software problem. I make an example:

IF AZIMUTH_rotor = AZIMUTH_satellite THEN Stop

This will occur in a yoyo effect.

IF AZIMUTH_rotor = (AZIMUTH_satellite + 6) OR (AZIMUTH_satellite - 6)
THEN Stop

This will control the rotor in steps. Of course, you can not control
a 3 meter dish to follow a LEO-sat in this manner. ;-)

An interesting subject for me, this one!

Our amateur radio rotators are generally very simple things, even when software controlled. They just go where there are told and stop with a bang! This results in yo-yo'ing, which stresses the whole assembly.

Software can help, but a far better solution is to ditch the simple motors used in these systems and go over to stepper motors. With a stepper motor driven system, it's possible to 'ramp up and down' the rotation rate to provide smooth starting and stopping with minimal backlash. I've used this method in the past for control of a several rotary machining tables for precision machining operations for a local engineering company.

It still surprises me somewhat that the big rotator manufacturers are still managing to sell quite expensive equipment that's so poorly manufactured (cheap pressed metal gears and cheap alloy castings etc) and using such crude and simple control systems.

Stepper motors are quite cheap really and it's possible to use a PIC or ATMEL MPU in a closed loop system that only needs to be fed the desired angles via a serial port. The G-232 rotator interface standard is easy to emulate with such a device.

The big advantage of going all digital is that the angles to rotate through just become target numbers to be counted down from and as the desired angle approaches, the motors speed (i.e. the time between step pulses) can be increased gradually to bring the device to a smooth stop. Digital control has a further advantage.... accuracy.

My machining centres used no potentiometers for position measurement. At the start of each machining operating, I used a slotted opto-coupler mounted on the machine bed and a moving target (a small twist-drill embedded in the side of the rotary table and ground flat... as a positional reference, which the software sought as a datum).

The 'homing operation' took place 'in the fly' while the operator was loading the next part to be machined.
All other angles were calculated in software from this absolute reference datum. No yo-yoing, no backlash and complete repeatability.

Some day, all rotators might be like this :-)

My AlfaSPID is not at all bad *and* it's built very well, so with a 'normal' set of antennas the strain is not at all bad. I drive mine in 1.0' steps, I could turn it down to 0.25' steps.

This is an interesting discussion, HB9HAL has an interesting rotator on his 10m dish, I'll have to get the details from him. This is steered in 0.1' increments.

Hopefully Yes :-)

This remembers me to an article in the AMSAT-DL Journal, in which is described how to upgrade the Kenpro/Yaesu rotors with an opto-coupler instead a potentiometer. If I remember me also right, the author was Freddy, ON6UG.

I have the azimuthal Alfa Spid and i drive a 2.7 meter dish with it and actually 4 beam ranging from a 2.4ghz to 144mhz and one degree is
more than needed for the actual LEO fleet and at the time of AO-40 it was also more than needed.

A little more on the machine control system I designed.

The rotary indexing tables I used had a 400:1 gear ratio and the stepper motor driving it was a 1.8degree/step with 0.7degrees half-stepping mode. The control software was written in assembler after initial tests using BASIC.

With 200 1.8 degree (coarse) steps per revolution, the table rotated 0.0045 degrees per pulse in coarse mode. Very fine increments indeed.

I made subroutines for various angles for convenience because the table movements were so fine.
There are two easy ways to control the start-up and slow-down of such a system..... software or hardware.

It is possible to buy (off the shelf) a dedicated drive module that is fed a train of pulses (at high data rate) and it has the job of ramping up and ramping down the stepper while delivering the exact number of pulses needed to drive the motor correctly. This ensures the optimum step rate for the motors without over or undershoot over the whole pulse-train sequence.

The other (cheaper) but just as good if done properly... method is to implement the same system in software. The software method requires much trial and error with 'real' hardware, to determine the best rates (without dropping pulses etc ... because the hardware can't cope) and didn't work quite as efficiently for me as the hardware solution although still IMHO very acceptable. I tried both but for a variety of reasons, the company selected the hardware method.
Time is money, I guess :-)

Since these tables use transverse worm gearing, they don't require any additional braking. The machines ran 24*7 for many years in a production environment with only minimal intervention. Their purpose was to drill a series of holes in metal parts.

The geared table was the most expensive item. The control computer was a hand built job.

I'm sure a similar system but scaled down in terms of robustness, quality and step size etc would make an excellent system for satellite tracking.

From: John Hackett
Topic: 1937 Message: 1937

Nice pics Simon.

For the newcomer, don't let the pics scare you - such a set-up is *NOT* mandatory to enjoy working satellites.

On the Amsat-bb this morning there was a gentleman bemoaning the cost of *ALL* the equipment necessary to work the satellites ... BALLCOCKS !!!.

Once again !!! Amsat giving the wrong impression of what is necessary and what isn't. GM1SXX will back me up on this - as will Howard Long - (and if you don't know his !!! callsign, you really should !!! be lined up againsy the wall and shot at dawn).

Even those with a limited budget can find older and/or second hand gear on Ebay for a kiss and a song.

As previously mentioned (many) times, circular polarisation is *NOT* a necessity - though in certain circumstances it 'can' be an advantage. "Switchable" linear polarisation for LEO's is a far better solution for the potential newcomer.

Even a computer isn't necessary for satellite tracking. Any old modern mobile phone will do - (with the SATme) program.

The point ? ... if you want to try satellites, *DON'T* !!!! be scared off by the picture of Simon's station, all that gear is *NOT* necessary.

... and before you all start whinging that- "only experienced operators would be here anyway" ... you're wrong !!!! ... I can assure you that many potential newcomers check out these pages.

That's what they're here for.

I agree, one nice thing about satellites is that transmit and receive aerials are (or can be, for LEO's) modest in size and can even be hidden indoors.

When I first got interested in satellites, I had contacts via the RS birds using home-made aerials mounted on a pole that I could rotate by hand. I later 'graduated' to a pair of home-made (ordinary linear polarised) yagis, fixed in elevation, and mounted on a cheap TV rotator on a scaffolding pole that I used for many years with fixed elevation.

I got side-tracked later with UoSAT2, a downlink only 'intruder' in the 2M band on 145.826Mhz FM... a University bird that transmitted interesting telemetry, which led me into writing software for decoding and archiving the telemetry, but... enough of that!

The point I'm trying to make is that it's fine & dandy if you are a rich devotee and have money to burn on automated AZ-EL systems with expensive commercial preamps etc and computer control, but the newcomer to this aspect of the hobby should not be daunted by all this stuff. They should realise that it is possible to work FM LEO's with only a hand-held aerial and a pocket sized rig. You don't actually *need* all that expensive kit to get started.

Much though I dislike FM birds, they are easy for newcomers to get going on and Howard's website is a great place to start.

http://www.g6lvb.com/Articles/operatingAO51.htm

Jerry Brown's DIY aerials are also worth a visit.
http://members.aol.com/k5oe/
I can recommend Jerry's 70Cms quagi as a cheap and easy design.

Our hobby has something for everyone, and the amateur satellites are no exception. For those who wish to 'put a toe in the water' and make an minimal financial investment, AO51 will do that for you. If you like more of a challenge, that also is possible, thankfully.

Not a problem Simon,
I've been doing it for many, many years.

When I get around to it I'll send you some pictures of me operating in minus 34 degrees from Fallet in Eastern Norway.

I've also operated from Jairabub in the Sahara in Libya in plus 43 degrees.

Quite extreeme differences.

I can tell you ... Yaesu rotors do *NOT* operate in minus 34 degrees "as is" ... you have to change the oil. A homebrew "screwdriver" elevation rotor is far more effective in those temperatures.

In the Sahara, we only used electronically switched beams. It is 'NOT* wise to use mechanical rotors in sandstorm environments.

Here is my previus antenna system. Its based on Linear Actuator. It was Mak's (sv1bsx) idea for low cost 3D antenna system!!!
i worked several stations with this antenna system for a lot of months.

http://www.sw1jgw.com/photo.htm

very interesting case is SW1EIX's antennas a new Satellite Comunicator. This antenna system was builded with the advices guess who?
Mak's of course!!!
http://users.otenet.gr/~sw1eix/sw1eix/

A very good peroformance with very low cost ideal for the begginers!!Dimitrios Pallis (JIMMY)73 de SW1JGWwww.sw1jgw.com

--- In eu-amsat@yahoogroups.com, "SV1BSX" <sv1bsx@...> wrote:> .....the most impressive antenna-setup that I have ever seen isthat, by DH5MK:>
http://www.dh5mk.de/pages/gallery/90-degrees-elevated9.phpI agree, one nice thing about satellites is that transmit and receiveaerials are (or can be, for LEO's) modest in size and can even behidden indoors. When I first got interested in satellites, I had contacts via the RSbirds using home-made aerials mounted on a pole that I could rotate byhand. I later 'graduated' to a pair of home-made (ordinary linearpolarised) yagis, fixed in elevation, and mounted on a cheap TVrotator on a scaffolding pole that I used for many years with fixedelevation. I got side-tracked later with UoSAT2, a downlink only 'intruder' inthe 2M band on 145.826Mhz FM... a University bird that transmittedinteresting telemetry, which led me into writing software for decodingand archiving the telemetry, but... enough of that!The point I'm trying to make is that it's fine & dandy if you are arich devotee and have money to burn on automated AZ-EL systems withexpensive commercial preamps etc and computer control, but thenewcomer to this aspect of the hobby should not be daunted by all thisstuff. They should realise that it is possible to work FM LEO's withonly a hand-held aerial and a pocket sized rig. You don't actually*need* all that expensive kit to get started.Much though I dislike FM birds, they are easy for newcomers to getgoing on and Howard's website is a great place to
start.http://www.g6lvb.com/Articles/operatingAO51.htmJerry Brown's DIY aerials are also worth a visit. http://members.aol.com/k5oe/I can recommend Jerry's 70Cms quagi as a cheap and easy design. Our hobby has something for everyone, and the amateur satellites areno exception. For those who wish to 'put a toe in the water' and makean minimal financial investment, AO51 will do that for you. If youlike more of a challenge, that also is possible, thankfully. 73 Al.GM1SXX

Hello Thomas
Thank OM for reply
Yes every thing was ok at the setup.
The satellite listens to me every time I send an order to
update my directory or to Downloaded any file! A text file or a
photo etc.
And some time the satellite put me in row with other stations
As you can see in the photo I have add to photo section in the eu-
amsat. Under name - pacsat download album.
Every thing is ok except the sat refusing to upload my files.
At the same time the setup over here works perfectly with AO-51 sat!

Some friend says this problem may be from the TNC? But if there were
any thing wrong in the TNC Why it's working perfectly on download
side and not on upload side?

I hope I can solve this problem ASAP! I really like to work the
digital satellites.

Some are in the moon some are on the earth. A near IMAX video much better in full screen with your audio open better higher than lower.

Sit back and relax while waiting for the next HEO

Hello Nader

You are right, its not the TNC. I think its a software problem. You can delete GO-32 in Wisp completely and reopen it with its parameters. I hope this helps.

Or GO-32 is simply not accepting uploads ?

1950. AO-51 L/U mode SSB/FM

Yahoo group: eu-amsat
Date: 2008-09-23 00:17:45 UTC
From: Luc Leblanc
Topic: 1950 Message: 1950

HI

Couple of pass with nobody but a lot of stations out of the passband. Just hear VE3NPC in the morning pass and a K3 station swishing on the
evening pass and me calling in the void!. The downlink audio is very very low i have to set the volume near the maximum to be able to hear
something. Don't use automatic doppler for the uplink as you will have to "clarify" the voice.

It is not a killer mode... but it help to see how your L band apparatus is working. I don't know why the audio is so low?

Any explanations are welcome

If any one got a recording i will be glad to hear it. I will try to record something tomorrow morning if i can get up early to start the
wood stove as they forecast a minimum of -2 overnight. Autumn is really on the 21st of september here!!!

1952. AO-51 L/U SSB mode

Yahoo group: eu-amsat
Date: 2008-04-17 23:38:14 UTC
From: Luc Leblanc
Topic: 1952 Message: 1952

Hi

Something happen at 2300Z (1900EST) suddenly the audio level jump louder by a factor of 4 i have to reduce my volume level and i found my
TX audio was also much too loud... Now AO-51 look like AO-16 audio and QSO are manageable. I succeed to have one with Clare VE2NPC and i
also copy a lot of station but at the same floor level strength i used to have before my adjustment (see below).
Only Clare VE3NPC signal seems to get over this curious bottom floor level??

To be clearer all the station coming out the satellite are equal in strength? Only Clare was louder as a kind of AGC treshold seems to be
set too high making a kind of squelching effect?

I just made some adjustment here at the end of the afternoon in a hurry and from an uplink signal very marginal it became near Q5!!! i'm
not too sure what i done and if it is what i done who boost my uplink but i will have to make some test again as said something happen also
on the satellite at the same time?

More to come...and i was able to hear my downlink at LOS + 3'!!!

1953. AO-51 L/U SSB/FM mode

Yahoo group: eu-amsat
Date: 2008-09-24 15:14:19 UTC
From: Luc Leblanc
Topic: 1953 Message: 1953

On the morning pass i was able to have a QSO with WO3T Carm and VE3NPC Clare signal where good but manually adjusting the doppler became
more and and easy with the usage. I guess some adjustment where made live as the audio deviation swing and i think too much make only the
noise appears too high and it distorded the audio too much. The best setting is where the noise start to increased a bit.

I was able also to determine my transverter IF in zero beating my carrier and checking the frequency on a scope display. 1268.692,100 MHZ
equal to 144.01355MHZ on the exciter now i will have to figure out how to enter theses values in the tracking programs.

I was able also to confirm my last minute quick station modifications make's a huge difference on the uplink. My previous configuration was
the FT-847 driving the 1.2GHZ transverter who delivers about 3 watts into a downeast microwave 18 watts amp. The TX line was a 45 foot 5/8"
heliax feeding a 25 elements loop yagi. In this configuration my results where less than marginal.

Just before the evening pass i take the amplifier from the shack and i literally planted it over the heliax male connector at the antenna.
i wrap the amp and the 12V DC line in a clear plastic bag to be able to see if any moisture build up inside, as the amp heat sink became
quite hot.

Bingo my uplink is now quite good "lesson learn" put your amp at the antenna not in the shack... I don't figure out why there was so much
attenuation in the heliax? or it is a lossy coax jumper l used RG-214/U at both end only at the shack i have a SO-250 plug at the end of
the heliax where i should used an UHF to BNC adaptor??? Any ideas!

Finally this SSB L band experience was a good one and with the satellite deviation tweaking (Thank's to the control teams) this mode is
quite effective even if it still not a killer one.

1954. Monkey's uncle.

Yahoo group: eu-amsat
Date: 2008-09-24 16:45:36 UTC
From: John Hackett
Topic: 1954 Message: 1954

Hello Al,
Well I'll be a monkey's uncle - (or a dog's bollock).

As I mention earlier, after a couple of years of dwindling interest in satellites and having my fair share of DXCC's for various other modes I decided to finally throw in the towel ... so I *RIPPED* down all the aerials today.

You know my thoughts on FM satellites even though I did have the one QSO on AO-51 when it first came online - to see what the fuss was about.

I've listened occasionally since and noted amateur satellite operating at it's worst so have never added to the bedlam.

It was interesting to listen to the californian stations, with W0EEC and myself linked via the internet, comparing the American stations operating with the Europeans ... whom do *NOT* understand operating disipline ... and paradoxically seem to agree.

After I'd taken the aerials down it was unusually "bare" here so just for the hell of it I decided to see if my IC-E91 and Arrow aerial were any good in competition with the mountains, so I tried an upcoming pass on AO-51. I fired up the handheld and shook my pointy stick at the sky between the mountains.

After noting that the Russians still "hog" it with high power I managed to slip in by using the old QRP technique of tail ending and chucked out ... "de LA2QAA portable" ... with UA5JPB coming back immediately.

My impressions? ... not much has changed, everybody talking and nobody listening, everybody ignoring low power or portable stations, never leaving a break for portable stations, still complete chaos and bedlam where the - "mine's bigger than yours" - mentality rules supreme.

FM on an LEO ? ... very !!!! smart indeed.

When Eagle grinds to a (screeching) halt I really won't !!! be surprised if someone in the Amsat b.o.d. suggests a 13 to 3cm FM transponder for PSK31 on a new LEO - after all, you'd only need a new rig, new computer and new tracking program to work it.

I do believe Amsat will miss me as much as I miss them ... (sob)

(Sob as in weep - not !!! as in "son of a beech").

Hi John

I would not want be put in the scavenger species! But if your intents about your aerials final destination is not yet ascertain. I am
always at the search of prey? Dead or alive and in their existing condition. Just in case the recycle bin is a possible destination for
your aerials. And as usual if it is not to cost prohibitive...

Hi Luc,
Scavenger? - by no means !!!. I only wish there was someone who 'could' use this gear ... I would give !!! it away immediately ...but unfortunately the cost of postage *IS* so prohibitive that the transceivers, aerials and cox will end up trashed.

I did offer the complete station - (several old but working transceivers) - plus preamps and coax to the radio club - (LA6K) - on the mainland but nobody could be bothered to drive the 10 kilometers to come and collect it.

No satellite-interested Hams in the area. Too expensive to start distributing by post to Finland and Sweden where there are !!! satellite Hams.

The rigs are so old nobody is interested these days. (FT-290/790 + home brew amps). Even the HF transceiver is an old IC-730.
I'll also be dumping 2 x old WIN 98 PC's and monitors.

I'd be more than happy to give all this gear away on a first come - first served basis but as I mentioned ... the cost of postage versus weight is *ABSOLUTELY* prohibitive, I simply can't afford to package, post and send via Ebay.

Wish !!! you lived around here Luc. Pretty stupid to have to dump this gear but what can I do ??.

I'll only be keeping the IC-E91 - (the only modern gear I have) - and an Arrow aerial ... just so I can keep plaguing the nice EU-Amsat folks - he he he - so I'll be biting the bullet and climbing down off my high horse to operate AO-51 occasionally ...
ARRRRRRRRRRRRRRRRRRRRGGGHHHHH !!!!!!!!!!!!!! ... FM.

He-he-he ... and yessssss folks, my subs *ARE* paid.

Hi John

I would not want be put in the scavenger species! But if your intents about your aerials final destination is not yet ascertain. I am

always at the search of prey? Dead or alive and in their existing condition. Just in case the recycle bin is a possible destination for

your aerials. And as usual if it is not to cost prohibitive...

Hello Al,

>Strange how nobody seemes to notice the bedlam on the birds until you
talk of throwing in the towel. Suddenly the problem is thrown into
sharp focus! Can't understand that attitude. It's *always* been
bedlam on the FM birds.

Absolutely right !!!.

The landlord did suggest I set up the aerials down at the bottom of the garden - but that would involve extra coax, rotor cabling and a *LOT* more signal loss ... I really can't be arsed - just to get a "report" on AO-7 - (where I can hear myself perfectly well anyway).

Nah, there's nowt up there now - (satellite-wise) - that captures my interest anymore. I've gotten tired of it.

Just for laughs I'll modify a PC headset/boom mic with a homebrew VOX and see if my puny little QRP can compete with the high powered - "lets 'hog' it" - alligators.

What a turn up for the books.

I never imagined myself waving a pointy stick at the sky - it looks ridiculous !!!!! ... but then, I've *ALWAYS* been a QRP man and given my health - (read: lack of) - even I can carry the IC-E91 and a broken-down Arrow.

The sole reason I'll do this is to prove that even with the FM capture effect QRP can !!! compete with the alligators providing there a good operator "stuck" on the end of the Arrow aerial.

42 years operating isn't a bad "innings" - like I mentioned before, I'm enjoying playing again - whad'ya mean !!!! "at my age" ...
if Kieth Richards can do it, why can't I ??.

PS.

I intend to carry on jacking up "this lot" in EU-Amsat - so the buggers arn't going to get rid of me that easily.

Hi Thomas,
I wish they did !!! organise a boot sale or rally - then I could get rid of this gear in a sensible way. I'm *NOT* looking for any money for it. I'm perfectly happy to give it away FREE. It's just a terrible waste to throw away old but functioning-perfectly equipment when you consider the newcomers in other parts of the world who could use it.

My main problem is my health, I can't go collecting packing material etc so I can't "donate" it to other countries and I certainly can't afford the postage.

It's just one of those unfortunate circumstances Thomas.

On 25 Sep 2008 at 23:01, Greg D. wrote:

>
> Yup, it's working. Had a nice chat during the 02:46z pass with N6PAA this evening. We probably could work each other simplex
>(he's about 30 mi down the hill from me), but mode LU through AO-51 was significantly more fun.

My first morning pass 1123 UTC was Q5 and all his nominal on L/U FM mode Tracking is a lot less tricky i am not in a rush to have my uplink
and downlink doppler corrected...it was nearly like working on a local repeater! Only Carm WO3T show up and we enjoy a nice short QSO at
the end of his pass.

A bit of history now. My L band gear was the last pieces of equipment i get at the AO-40 time. The day before AO-40 became silent i was
making my 3 first QSO with one italian station and 2 german one. Signal where so loud that i have to put my dish off the satellite a bit in
a way to reduce my uplink signal. Unfortunately that was the end of great venture and the start of a money sunking one...There was even
some rumors circulating about "huge" signal hitting the satellite just prior his failure... We are all know now "I think" the sources of
the end of AO-40.

This L mode always intrigue me and if some EU station or South American station can be QRV it is possible to have international QSO at LOS
AOS.

As ISS will probably send SSTV picture in october i am tempted to test my SSTV capabilities? if the traffic remain low as it is actually
the pass is long enough the send at least one picture Is it a good idea? let me know. BTW It is not something to try on U/V mode!

P.S. I will use a very formal picture from my bank just to advise the potential prime time audience...

Hello Al,
This ought to warm the cockles of your 'pump'.

As you know, when vexed, I'm a tenatious little sod - so I said SODDIT - my landlord is *NOT* going to squeeze me off the set-allites just because I had to make the beams "disappear".

I really don't feel like ending up on AO-51 FM so here's the deal.

QRPpp with the FT-290/790 pair + 15w homebrew amp to an Arrow mounted on a camera tripod through a window from a basement flat.

Oh aye !! ... no preamp !!! - (I gave 'em away to LA4XGA, together with the beams and rotor) - and no CAT interface to complicate things.

QR pee-pee, but I bet you a pound to a pich of dogdirt I *WILL* make a CW QSO or three on AO-7. I've done it before I can do it again.

I also kept the IC-730 ... but otherwise, everything ended up in the back of LA4XGA's truck - (I "inherited" a lot of microwave gear from 4XGA previously so it was only fair he got summat in return). He's finished with Meteor Scatter now and is concentrating 100% on EME these days.

So ... The bitch will very shortly be back.

I've moved the rigs to the other end of the flat so re-cabling is the order of the day

Give me a 'week' and I'll give you a 'weak' ...

(Satellite signal that is).

Chinks in space - RGR ... what's a spacesuit among friends?. Better than Amsat's !!! - (that one is full of dirty laundry).

Hi Bob

A techies question!

With this redundant APRS circling around the same idea what i should tell to a young fellow (not a nerd) who with his cellular phone or
black berry and with cell phone 10-4 instant "CB" radio exchange, or with their internet browser capabilities files exchange, live video
chat and Hi DEF pictures exchange features and so on and so on. I am not even be able to cope with all the stuff coming out from this
"world"... As i said what i should tell him or her to make her or him to join the APRS band wagon? (not gang bang it is a bit easy to
convince on spring break...) That's probably where "file sharing" has been invented or diverted.

Yes APRS was a blast at a time but this" time" was equal to10 years in the 80's now it's not more than 1 1/2 year!!! Did HAM RADIO became
a senior hobby? Did we are so rusted that we always looking for the "easy solution"?

Ask Dr Phill you will say ? You got it! thumb's up APRS and LEO are in the same band wagon and they are not banging a lot anymore ;) but
as we say in french "On fait avec ce que nous avons" nothing more nothing less!

Can you imagine what you will do right now if there was no HAM satellite available? Are we living on borrowed time?

As one fellow wrote " I am moderated on bod (I thought anyone could send to bod?) so this may not
get to them." i posted this one on the following link:
http://groups.yahoo.com/group/eu-amsat/

The amateur radio free speech life buoy!

P.S. Did you hear the new alternate AMSAT bod member lately? Curiously silent lets called him "The silent partner"

Gentlemen,
(and the one lady). As you can see, in September
there were 169 posts to the reflector. Many of them useful to
the potential newcomer - which was the object of the exercise
in starting this group.

If the posts didn't always contain the exact information desired,
they very contained tips for further research.

Well done folks - keep banging away on the keys.

It would be particularly interesting if a few more Russian stations
could tell us what they're up to ... there's no lack of them on AO-51.
Perhaps our current eminent Russian members would like to pass the
word please ... a gentle wake-up call at 05:30 ?? ...

RIGHT !!! YOU BU**ERS - HANDS OFF YOUR C*CKS AND ON WITH YOUR SOCKS
IT'S A LOVELY MORNING AND THE BIRDS ARE CAUGHING THEIR BO**OCKS OFF.

Topic: 1974 Message: 1974

Hello folks,
As soon as I saw this post on the Amsat-bb I thought it deserved a wider audience - so I've taken it upon myself to redistribute it to where it might continue to enlighten Joe public who is often of the opinion we're as bunch of wierdos.

Actually, I feel !!! like a wierdo when I'm waving my pointy stick at the sky and some old dodderer comes up and wants to know what Gabriel is up to today.
.....
...

Eric,
As well you know, I consider the educational mission of our birds of paramount importance. Don't forget to mention in your article how they're being used in the classroom to teach a wide variety of subjects.

A few which come to mind:

orbital mechanics
basic electronics
Newtonian physics
geography
linguistics
meteorology
cryptology
thermodynamics
solar dynamics
radio astronomy
earth science

I'm sure I've left out quite a few areas, but my point is, there's far
more for us to do through ham satellies than simply whistle into a
microphone!

Hello all,

today evening took place a "great party" on AO-7 !

During #55108 orbit (@ 18.00 Z) the treaffic was unbelievable!
And without serious problems from FM-ing ! That's GREAT !

I noticed 43 recorded QSOs on Emily's LOG !
And I have to laugh with Mike DH5MK, as the first page of LOG
was not enough for his.... 10 QSOs !!!!
So he opened another, a 2nd page for the last 2 QSOs !!! Amazing !
Ho ho ho... FB Mike !

Well done gentlemen !

It was a great party with the "Old girl" !

Wild & Heavy "Rock'n Roll" was heard on the air !!

73, Mak SV1BSX

Hi Simon
Take a look to the previous DOS program of Pacsat
PB AND PG both at Amsat site.
Also you can download a full useable wisp program.

See some photo I posted lately at this site about Pacsat mail
You can receive text photo audio software etc via Pacsat

Digital satellite is the cream of satellite activity
Specially if you have a full computerize station.
Prepare your mail or replay for your mail and
go for you lunch , And when you came back to your station
you will found all your messages has been uploaded to satellite and
you have received a punch of a new mail from all the glob to read .
May if you tried once you well get the bug. I hope. HI HI

Nadar,
You said ...

>Digital satellite is the cream of satellite activity ...

I think you ought to have added IMHO - (in my honest
opinion).

I've been working satellites for a *VERY* long time
and have tried everything from a simple set-up to a fully
automated station - including of course the old Pacsats.

I always found 'digital' satellites extreemly boring - as did
quite a few other serious and experienced operators.

I much preferred 'manual' tuning so as not to fall asleep after
pushing a button. CW with the right hand and 'tracking and
tuning' the LEO's with the left, usually kept me 'awake'.

With the old PSK-1 and PB/PG you could !! fall asleep and let
the station do all the work - but like I said - personally, I
found it quite boring, with no skill element at all involved.

However - each to his own - that how it *SHOULD* be - IMHO.

hi John
Yes I suppose to add
Digital satellite is the cream of satellite activity IMHO

May if we have more Pacsat around! No need to have WI FI net at my
shack
as long as i can post mail and update my keps IMHO

One of my kids became ham after I posted a message in front of him to
ISS BBS
I still remember exactly what he had said." Dad now your are a part
of all this big space station technology "

To recruit more young generation to our hobby, I think we need to
integrate more advance technical mode in our satellite communication
than to spending all our time correcting the Doppler and using the
second hand at an ancient mode key IMHO

How can I convene my youngest kids to became a ham as long as he
holds in his hands all the day a portable play station that contain
an internet link to play games around the globe at every time with
any kids ?

IMHO we need more advance technical mode ASAP to keep this hobby
going on.

WOW

Mike this is so kind from you, thank you very much.

I had a chat with some friend about getting a DXCC
On LEO satellites.

By pen and paper this can be so easy to be calculated.
If I work more European countries
Some of Asian countries, Middle East countries
And all African countries I can get more than 100 DXCC entities

BUT
Unfortunately there no so much activity from Africa
or middle east !

I worked last week 5R8KH
And some more friends will be on air (I hope soon)
Like 9G5ZS ,5X1DF,5Z4LA .

(Thanks Hal ZS6WB for information)

Thanks again mike

That really is the 'essence' Nader - excellent !!!.

We need to recruit more of the younger generation - that is PRECISELY !!! why Mak and I started the EU-Amsat group ... a lot of the other Amsat groups seemed to be fast becoming a rich (OLD) man's club.

I support *ANYTHING* that will get the youngsters interested ...
even the 'dreaded' one-eyed beast - FM ... ARRRRRRRRRGH !!!!.

I respect anyone who is passionate about their chosen field as you obviously are Nader. I can say quite honestly that had I been able to afford it, I too would have purchased a state-of-the-art satelliter transceiver..

Have a good day and enjoy the excellent company of the EU-Amsat members.

Hello Allen

John, KD2BD, has also built the PacSat-Modems for 1200 bps and 9600 bps.
The first modems in the early 1990s was developed from James, G3RUH.
See Johns sites for 1200 bps Fuji modem:
http://www.amsat.org/amsat/articles/kd2bd/Pacsat_Modem/
and for the 9600 bps FSK modem:
http://www.amsat.org/amsat/articles/kd2bd/9k6modem/

Hi Thomas,

Only just got back from work. Thanks for the email.

On Tuesday the website had Ten Thousand individual visitors and that blew the bandwidth limit of Internet Service Provider (ISP).

Obviously a solution to this is being urgently sought but it may be out for a couple of days.

BTW did you spot the item about last weeks IAC2008 event in Glasgow. OSCAR-6 got a brief mention in one of the presentations.

Hi Nader,

I don't see any problem with having *only* 124 members.
The purpose of setting up Eu-AMSAT was to provide a forum where free
thought would be tolerated without the excesses of the BB.

I think it has managed to do that pretty well.

So if you know of anyone who may want to join, by all means encourage
them to do so. That is how the current membership has reached 124.
FWIW I prefer the personal recommendation approach.

Hello Al,
This data was captured with the Holux bluetooth matchbox sized GPS receiver and VisualGPSXP - on the FLOOR !!! of a basement flat just a few minutes ago.

Points to ponder.

The built-in 1500Mhz 'aerial' is about 3mm in quadrature.
Note particularly the nine (9) !!! satellites reception.

I *WISH* there was some useful way to utilise this *telemetry' in amateur radio.

I'm aware of a couple of Yanks using the data to steer homebrew robots but I wish somebody would write a program useful to satellite orientated amateur radio operators.

2005. Re: THE ZOO.

Yahoo group: eu-amsat
Date: 2008-10-09 13:58:44 UTC
From: John Hackett
Topic: 2001 Message: 2005

Hi all,
Actually, the standard of FM operating over the USA is *FAR* superior to that over Europe.

It can best be described in 3 words ... manners, manners and manners.

I listened to quite a few "live" contacts by curtesy of W0EEC
(before she became N1DID) and Echolink.

The American style of operating is rather like the old Royal Signals system of SSSHP -
(short, sharp, sh*t hot paces).

Callsign, locator, QSL (acknowledge) 73.

A far cry from the "waffling", "hogging" and "mine's bigger than your's" syndrome over
Europe.

I was considering writing a "proceedure for use" for AO-51 but on second thoughts I came to
the conclusion that I would be wasting my time.

The odd thing is - almost everyone seems to be aware of the problem ... but still it
continues.

The *THOUGHT FOR THE DAY* must surely be ... perhaps we should emulate the Americans on
AO-51 and use the SSSHP system - (see above).

Another "good operator" technique is to give the /P operators a chance. They're almost
always using a handheld tranceiver with 5 watts - (usually a lot nearer 3). A slight pause
between transmissions would allow the QRPp operators to break in.

Ohh, one more thing, how about using EARS !!!!.

(Listen ?? ... don't be daft !!!!, this is Europe.....GM1SXX).

Hi John
This way I suggest more members to share in this group
so you can forward any message (advice) to more operators .

2008. More ZOO comments.

Yahoo group: eu-amsat
Date: 2008-10-09 17:11:37 UTC
From: John Hackett
Topic: 2001 Message: 2008

Hello Nader,
Many years ago, I used to write monthly columns in OSCAR NEWS and THE AMSAT JOURNAL - these two magazines alone had a readership of many thousands.

On several occasions, over a period of a few years, through my column I suggested to the editors of the various international Amsat publications that they compose "operating instructions" for the satellites - Pacsats as well as analogue voice - and offer these to the National Societies like the ARRL, RSGB, NRRL etc for publication in their society magazines as a helping hand for the potential newcomers.

I regret to say, my suggestions were ignored. That's the main reason I mentioned in my last post - I fear I'd be wasting my time writing an "instructions for use" for AO-51.

As I mentioned, almosy everyone seems to be aware of the problem - but still it continues.

Before "OBSERVATIONS" became a web-based forum. it was originally a monthly colum in Oscar News and The Amsat Journal.

These days it is an "ongoing" project as a FREE resource to the amateur satellite operator curtesy of myself and GM1SXX.

You'll find it at <http://www.observations.biz>

I'm old and tired now Nader, it's time for somebody with a bit more energy to carry the torch.

Observations is mine and Al's (GM1SXX) way of putting something back into the hobby - for the same reason, we started the EU-Amsat group together with Mak SV1BSX who first launched the concept.

SV1BSX Mak = member 1
LA2QAA John = member 2
GM1SXX Al = member 3

(I wrote the main-page text, Mak did the graphics, Al, as an IT "techie" does the bulk of the work on OBSERVATIONS.

What has ensued is a good example of three different countries working togetherfor the common good.

So you see ... we *ARE* contributing to Amsat - in our way. We try to teach by "example" - and as Al has already mentioned, our intention was to have a forum where people could express their opinions *WITHOUT* being flamed !!! by a bunch of people who *DON'T* share the same opinion.

It is my contention that the EU-Amsat group consists of a great bunch of people with a myriad of experience in all the various aspects of satellite operating ... from QRPp (me) to the BIG GUNS

(ES1RF) to offer the potential newcomer. We have members on all continents.

I believe we've acheaved what we set out to do.

Hi Thomas,

It was only a very short mention of OSCAR-6 in one of the speeches at the event. For details and link to speech see:

http://www.southgatearc.org/news/october2008/small_satellites.htm

I know several AMSAT-UK members were at the event but I've been so busy over the last couple of weeks I've not had a chance to talk to any of them. Unfortunately it wasn't possible to have the RSGB Radio Communications demonstration vehicle there, equipped with full sat station for 144/435/2400 MHz. The original vehicle had to be decommissioned earlier in the year and although it's replacement was planned to be there in the end the time scales didn't permit it, see

http://www.southgatearc.org/news/october2008/gb4fun_being_fitted_out.htm

2011. SSTV on ISS

Yahoo group: eu-amsat
Date: 2008-10-10 05:49:16 UTC
From: Luc Leblanc
Topic: 2011 Message: 2011

Excerpt from ARRL

ZCZC AS07
QST de W1AW
Space Bulletin 007 ARLS007
From ARRL Headquarters
Newington, CT October 9, 2008
To all radio amateurs

SB SPACE ARL ARLS007
ARLS007 Garriott Gears for Space Journey

On Sunday, October 12, Richard Garriott, W5KWQ, is scheduled to begin his journey to the International Space Station (ISS) as he blasts off into space via a Russian Soyuz and dock with the ISS two days later; he is due to return to Earth on Thursday, October 23. Richard, the sixth private citizen to be accepted by the Russian Federal Space Agency (RKA) for a short-term mission on the ISS, is the son of Owen Garriott, W5LFL.

In 1983, Owen was the very first ham to make QSOs from space. Richard said he plans to build on his father's legacy by also making QSOs from the ISS: He plans to perform several school contacts and downlink SSTV images during his flight, as well as contact the general ham community in his free time and perform random scout contacts during Jamboree on the Air (JOTA).

According to ARRL Amateur Radio on the International Space Station (ARISS) Program Manager Rosalie White, K1STO, excitement is building for this launch. "Richard and Owen have been working as a team to plan how to cram in all of the objectives Richard hopes to achieve in space, including scientific experiments."

Through White, Richard and Owen sent this message for all hams:

"We are both very pleased and appreciative of the ARISS and ARRL support in making the voice and SSTV ham operations more fun, interesting to the public, and valuable for research on Richard's flight this October. One of the most exciting aspects of living and working in space is the chance to look back at the Earth. Owen had one of the first opportunities to do this 35 years ago on Skylab. e also had the first opportunity to talk with the ham community from space 25 years ago aboard [NASA shuttle mission] STS-9. Richard now has the opportunity to connect with the ham community almost exactly 25 years after his father's shuttle flight and 35 years after Skylab. One of Richard's primary objectives with his flight is to photograph the Earth 35 years after the first orbital laboratory and

look for changes on the Earth in the intervening time. While Richard is at the ISS window, he will be operating the amateur SSTV equipment and sending its images down to hams around the world. These downlinks can then be sent to an ARISS central repository for delayed and wider use. We further expect to be able to compare many of the images with near simultaneous, handheld, high resolution digital photo images. We are very excited to share this experience with the Amateur Radio community, and thank our fellow hams for their support of this project."

Hello Trevor,
Well, in 1998 I actually wrote n entire book !!! ...
together with Al, GM1SXX entitled ... THE BEGINNER'S GUIDE TO AMATEUR RADIO SATELLITES.

It was a NON-PROFIT project paid for entirely by Al.

(Our way of "putting something back in").

It is also published on ...

<http://www.observations.biz>

It covered all aspects of amateur satellite operating as well as some aerial theory + some *VERY* unprofessional drawings by that LA2QAA fellow.

We distributed quite a few promotional copies to the various Amsat groups, even as far away as Australia, but unfortunately Amsat-UK showed no interest whatsoever.

I even believe there's a copy within this groups archives somewhere - Al would confirm or deny thist since he does the donkey work - (read: distribution of internet material) - and would have posted it to the archives ... I think !!! ... but don't quote me on it.

The material *IS* copyright so if anyone needs some extra kinder to start their fire they'll have to ask us first.

Hi Folks.

FWIW, I honestly don't believe there is any shortage whatsoever of material for beginners to Amateur Radio satellites.

Try..
http://www.amsat.org/amsat/intro/faqs.html

or how about this page...
http://www.amsat.org/amsat-new/information/faqs/

There are also various PPT presentations, should you find text too boring.

As the old saying goes... 'Google is your friend'.... just so long as you don't mind them building a saleable profile of your Internet surfing habits! It took me only seconds to find the above.. Think what a concerted effort might produce :-)

Really, it's just down to making a *very* small personal effort on your voyage of discovery. There's plenty of info out there... should you be motivated enough to type the odd word or two into Google.

Try ... amateur satellite + beginner ... and take it from there. Not very difficult really. Is it?

While you are Googling, have a look at K5OE's dirt cheap satellite aerials. They work... honestly. A search for K5OE should do the trick.

Wait!..... I've done it for you!
http://www.amsat.org/amsat-new/information/faqs/
It took at least 10 seconds of my remaining life on this planet to do that for you.

Honestly.... the web is awash with info for beginners. A little motivation is the key.

Hello folks,
Here's another 'OBSERVATION FROM NORWAY'.

The Gentleman who wondered why Norway apparently never appears on ISS contacts might like to have a look at the ISS trajectory and orbit - then have a look at where Norway is situated on the globe ... err ... right !!!.

Apparently, I'm not the only QRPp'er. I suggest all serious satellite operators read ther following post 'snipped' from the Amsat-bb.

Why not give it a try, those 'bottle fed' on 100 watts and a 10 element beam just might get a surprise.

As I've mentioned previously (several times). the power you need working a satellite down on the horizon and working it 'overhead' is quite different. How many operators 'do' adhere to the "using only the required amount of power to maintain reliable communications" convention ??.

In these 'green' times there's a *LOT* of power being wasted ...

Think about it.

I can assure you, there's a lot more satisfaction 'working' at it rather than just turning the brain off and pushing a button.

William of Occam got it right . 'tis vain to do with more that which can be done with less'.

OBSERVATIONS applauds Tim N3TL.

73 John. <la2qaa@...>

Date: Fri, 10 Oct 2008 15:08:49 +0000
Subject: [amsat-bb] How low can you go?

Hey Everyone,

This weekend, AO-51’s operations team is giving all of us who work the FM satellites a chance to answer the question in my post's title to our own satistaction.

Here, I’m reaching for a fresh set of Duracells! I’ll be running QRO on them this weekend, though – pumping all 300 milliwatts out of my VX-7R HT into the new Elk log periodic antenna I’ve been running through the ringer for a week – with really good results.

I challenge all of you who will be working the “QRP pair” on AO-51 this weekend to see how low you can go with the RF out and work the satellite. As many of you know, the Satellite Communications Achievement Award (No. 473) that just got posted to the AMSAT Web site for N3TL was earned solely on the basis of confirmed contacts I made while running 50 mW rf out of the VX-7R – on the same set of 2 AA Duracells. I’ll use the other alkaline-battery power setting this weekend, which is 300 mW.

One of the elements of this very low power work I find most exciting is trying to “reach out” as far as I can. For me, it’s not the distance from N3TL in EM84 to the other station I’m working on fractions of a watt that is important. Rather, it’s the range from my location to the satellite at the moment of contact. That tells an interesting story, I think. Example – During my Duracell Experiment, I worked Jim, KC9ELU, on AO-51 when the satellite was at 8.6 degrees elevation to my west. I use Orbitron to keep track of upcoming passes, and its simulation mode lets me go back, after a pass, and check stats from contacts. When Jim and I worked, my 50 mW traveled 2,482.003 km (1,542.245 miles) to the satellite. Do the math – that’s 49,640.06 km (30,844.9 miles) per watt. I don’t expect to get close to those numbers at all on 300 mW this weekend, but I’m anxious to find out.

I will post my farthest to-the-satellite distance that resulted in a two-way contact early next week. I hope others will do the same, including rf out and distance to the satellite during the contact. Not only is this fun (for me, at least), but it also provides a great test for our respective stations, letting us know “how low we can go” in, say, a true emergency and still complete effective communications. FYI – I always err on the side of caution when posting numbers like those above. That is, I always use the highest elevation/shortest range to my location. Even a few seconds during a contact has the satellites moving ever closer or ever farther from us, depending on which part of the passes our contacts occur. I use the highest angle/shortest range because I know it was no higher or no closer to me during the contact.

73 to all,

Tim – N3TL

From: John Hackett
Topic: 2024 Message: 2024

Gentlemen (and Lady),

The majority of satellite operators who are members of this group are experienced operators and generally *DO NOT* contribute to the QRM and poor operating standard on AO-51 over Europe.

In Thailand, Canada,Mexico and The USA, they have no problem whatsoever to consistently work others using 1 watt of RF power.

I'm ashamed to say, here in Europe, a 50w station very often can't get into AO-51. What makes we Europeans worse than the rest of the world ??. IMHO a poor standard of operating.

I am *NOT* going to "preach" like a self proclaimed "policeman" - I just want to remind people of the two main "faults" with European satellite operating - namely, excessive power and poor operating technique - sometimes resulting in plain old fashioned bad manners.

The "bottle-fed" 100 watts to a rusty nail alligators quite often just don't 'know' any better. They assume it's like HF, where *POWER* is the status multiplier. On satellites, the opposite is true.

Therefore, these operators need educating. I respectfully suggest that we challenge *EVERY* AO-51 operator to*REDUCE* their power by 3 dB ... (that means reduce the power by half). If *EVERYBODY* on AO-51 does this we will be a *LONG* way towards combatting the main *PROBLEM* on this satellite.

We're all aware of the capture effect of FM. The way to increase the throughput is ...

1) The old QRP technique of "tail-ending".

2) The "good" operators leaving a short break after each over ...

... to see if there is a QRPp or portable station trying to get into the satellite.

If you want to ragchew, AO-51 is *NOT* the place to do it. If you absolutely *MUST* contact the same station everyday, please QSY to VO-52 or AO-7 and leave AO-51 to the "short contact" folks, that's the only thing FM modulation on a satellite is good for - unless you're still in the military - but we needn't go into that.

C'mon chaps ... if you're running more than 5 watts, give the QRP lads a chance.

Let's show the rest of the world that Europeans *CAN* operate, why don't we try a 1 QSO per pass in the periods marked out by the control stations for QRP operating.

These periods *HAVE* been abused by the high power boys ... (if you're using 20 watts, you're a high power boy) ... as GM1SXX always says -"aluminium is cheap" ... use a decent aerial !!!.

If 1 watt on an Arrow aerial can do it with a decent signal, so can 100mW to a 10db gain aerial ... or any equivalent permutaion of the figures ... that's 10 watts to a 0 (zero) dB gain aerial ... yessssssss, I know !!!! ... theory v practice etc ... but you really *DON'T* !!! need a lot of power.

Try reducing your power by *HALF* and see what happens.

Remember !!!! ... "overhead" you'll need *LESS* than half the power you need "at the horizon".

Let's "educate" those operators who simply just don't know.

The LIDS we can't do very much about - it's a personal choice as to what kind of operator you are.

2026. duplication of QSO on FM sat

Yahoo group: eu-amsat
Date: 2008-10-12 10:30:21 UTC
From: st2nh
Topic: 2026 Message: 2026

I think the best way to work FM bird in congested area like Europe is to avoid duplication of QSO every day with the same station worked before, Let us listen for a new one. Every one sends up his callsign and listens.
Yes it's good to say hello to a friend when ever you hear him .we can do that on transponders sat .or let us conceder saying my callsign after I hear your call is a mark for greeting on FM bird .

2027. RE: [eu-amsat] duplication of QSO on FM sat

Yahoo group: eu-amsat
Date: 2008-10-12 10:45:41 UTC
From: Dimitrios Pallis
Topic: 2026 Message: 2027

I THINK that is the best proposal i have ever heard!!
And of course if for example do a qso with nader or another one difficult DXcc i must stop calling other stations and let the others to have the oportunity to talk with nader .
I was trying to make a qso with a Saudi Arabia stations for about 6 months. (thank you Nader for helping me) The problem was that i heard the same STRONG stations to make the same qso on same satellite twice a day!!!
If you search youtube you will see a lot of videos with americans making qso with portable rigs like VX7 or D7. Here in europe this is imposible!!!!!
I love SSB Satellites (linear transponders) but AO51 has a very very critical role. BEcause it is strong and reliable is the perfect bird for newcomers but if the big guns still use it like today, new comers may disapointed. As me in the beggining and of course i had Mak Sv1bsx to help me and to give me advices or hopes for making a qso.... Think that if there wasnt MAk may i had leave the birds!!!
So we must help new comers to make qso and let work the bird with low power (5watts), without making long time qsos etc etc and of course we had to read the schedule!!! because yesterday was a tragedy while we was trying to recieve SSTV some guys was calling phone!!!Dimitrios Pallis (JIMMY)73 de SW1JGWwww.sw1jgw.com

2031. SSTV test images received

Yahoo group: eu-amsat
Date: 2008-10-13 06:09:25 UTC
From: st2nh
Topic: 2031 Message: 2031

Several operators are reporting that ISS is transmitting test images today (Oct 12) beginning about 1700 UTC. Two formats have been reported. Robot-36 (which is anticipated for most of Garriott's flight) and Martin-1. Several operators have uploaded these test images to the ARISS SSTV gallery.

http://www.amsat.com/ARISS_SSTV/

These test images will likely be removed to make way for the Garriott images when they begin coming down.

2032. 40KG Chinese microsat.

Yahoo group: eu-amsat
Date: 2008-10-13 12:04:05 UTC
From: Allan Copland
Topic: 2032 Message: 2032

Hi Folks,

Does anyone in the group have info on this bird, especially frequencies used? I'd imagine it transmits in the military VHF or UHF allocations.

This from Space Daily.

73 Al.
SXX
==========

Release of miniaturized satellite

A miniaturized satellite was released during the mission on September 27 at 19:24, after Zhai returned to the spacecraft. The satellite was a cube about 40 cm (16 in) long, with a mass of 40 kilograms (88 lb); it carried boost devices and two 150-megapixel stereo cameras.[22] The satellite's tasks included testing the mini-satellite technology, observing and monitoring the spacecraft, and testing the tracking and approaching technology used for space rendezvous and docking.[23]

According to the mission plans, the miniaturized satellite will first take photos and videos near the spacecraft, then maneuver to about 100 to 200 kilometres (62 to 120 mi) away from the spacecraft. After the return module separates from the spacecraft and re-enters the atmosphere, the satellite will catch up to the orbiting spacecraft using a liquid ammonia engine, then continue to orbit near the spacecraft. The mini-satellite will work for about three months.[24]

I should have added that is was released from Shenzhou-7 on the recent
Chinese space-walking mission.

Hello Florian,

the last pass of ISS (~14:17 Z) was perfect for my location, however I
heard nothing !
The frequency is 144.800.

Keep in mind, Dimitris SW1JGW received pictures from AO-51, NOT from ISS :

2039. 1st QRP on sat from Europe

Yahoo group: eu-amsat
Date: 2008-10-13 18:42:57 UTC
From: st2nh
Topic: 2039 Message: 2039

Hi all

The 1st QRP station I worked from Europe on AO-51 today at 16:23z
YO2LZP /QRP- Vlad, he was 5/9 at KK65GP and my signal was 4/1 at
KN05OS.

I'm using a pre Amp, out put power 10 Watts to a homebrew antenna
6 horizontal elements on vhf and 12 vertical elements on uhf on same
boom.

Vlad said he was Using 5 Watts and homebrew antenna.
You can listen to audio file at
http://www.st2nh.com/QRPSATQSO.wav

On the same pass there was a heavy QRM from some kind of
telecommunicating equipments !may be from some where in North Africa!

>
> In these 'green' times there's a *LOT* of power being wasted ...
>
It take's time to understand the "using only the required amount of power to maintain reliable communications" but when this concept is
discovered it is only to see that as soon as you adhere to it you became "alone" on the birds as many "including the veterans" are not
doing it! Even those on CW!!! i should rather wrote "especially" i don't know why on satellite CW make's them "unaware" of it.

By ignorance? by a lack of funds? or by something else? be my guest and send us your suggestions.

Should we start a satellite police system? i was one who suggest this idea but what about those who cannot afford a decent receiving
system?

Hi Luc,
I don't think that self-appointed 'policemen' will help the situation,
in reality, it may do exactly the opposite, but a little aluminium
might :-)

Let's face facts.... it's easy to make a simple yagi... the Internet
abounds with designs. Being 'deaf' is no excuse IMHO. There is
simply no excuse for using a poor receive aerial on satellites.
If you can afford an HT, surely you can afford a matching aerial?

And, no, it doesn't have to be expensive, so let's not go down that
road either.
Radio Aerials can be made from scrap materials. Even poor people can
use decent radio aerials. They can easily be made from wire, metal
rods and wood or scrap plastic pipe.

Examples....
http://www.wa5vjb.com/references/Cheap%20Antennas-LEOs.pdf
and
http://www.g6lvb.com/HomebrewArrow.htm
and
http://www.qsl.net/ve3cvg/antennas/cheapyagis/index.html

They are all variations on Kent Britain's design and the driving
features are that they are
1) Cheap
and
2) Easy.

IMHO, there is simply no excuse for using a poor receive system on the
birds. Use a lousy TX system by all means, if that is your thing,
but please please please, use a decent receive system.

73 Al.
PS. I almost forgot.. try
http://members.aol.com/k5oe/index.htm?f=fs
also.

2042. *POWER* !!!! ... (as in "flea")

Yahoo group: eu-amsat
Date: 2008-10-14 09:49:10 UTC
From: John Hackett
Topic: 2042 Message: 2042

Hello Everybody,
Just thought I'd bat the following post over, from the Amsat-bb.

Please read but more importantly, 'digest' it.

BTW - I must retract an earlier opinion of mine about American operators. They are *NOT* all as diciplined as the ones I chanced to hear on a ("specially prepared") demo disc.

I've been downloading a *LOT* of live AO-51 QSO's from the Internet and I'm sorry to say, my revised opinion is that on the majority of AO-51 passes over the USA the standard of operating is atrocious.

However, with a bit of patience and obviously good operating proceedure there are certain operators that make up for the general poor standard.

I *DON'T* have an easy answer for cleaning up the act. Amsat must take a *LARGE* portion of the blame for ...

1) Introducing an FM satellite to the operating community ...

... and yessssssss, I *AM* aware of the "constructor chellenge" argument, and ...

2) Failing to produce adequate "instructions for use" via the national societies.

As I've previously mentioned ... LIDS will be LIDS and there's not too much we can do about it - we can only teach by "example".

Again, as stated previopusly ... one must choose oneself what type of operator one wishes to be known as.

The gentleman in the following post gets my vote ... everytime !!!.

73 John. <la2qaa@amsat.org>

.....

Hey everyone,

Over the weekend, I ended up working four passes of AO-51 running 300 milliwatts out of my Yaesu VX-7R HT, which was powered for these passes by 2 AA Duracell batteries. I used the Elk 2M/440L5 log periodic antenna - handheld - for all four passes.

Here are some numbers:

I made a total of 11 contacts in the 4 passes (1 with 4 contacts, 1 with 3, and 2 with 2).

The average elevation of the satellite during these 11 contacts was 34.1454 degrees. The average range was 1,364.0726 kilometers/847.5954 miles.

A contact with KG4ZLB at 00:26 UTC on 12 October found the satellite closest to me of any contact – 53.5 degrees at a range of 959.810 kilometers/596.3995 miles. A contact with WD9EWK at 01:09 UTC on 11 October found the satellite at its most distant for any contact – 12.3 degrees at a range of 2,197.771 kilometers/1,359.418 miles.

That was fun!

73 N3TL.

Hello folks,
I encourage every FM operator to check out N3TL's biography on QRZ.COM
<http://www.qrz.com/>

Lower the power and raise the bar ... that will also raise the enjoyment/acheavement factor.

Hey Mak, how about this an EU-Amsat AO-51 "MILES PER WATT" award?.

We used to run one in the G-QRP club in the early 80's. A lot of fun. I'm sure it would be fun on AO-51 too and it just *MIGHT* raise the standard of operating.

(Have you lost your marbles?.....GM1SXX).

....excellent copy Nader! FB!
(however I wondering what is the main menu... strange suff ... Hi hi !)

If you have the MMSSTV for software (I think that you have) the SLANT is possible to be better.

Go:
Options->Setup MMSSTV and "check" the AUTO SLANT.

Thus your next picture will be perfect.

The problem is not FM but the single channel satellite. Listen to AO-16
and you know, what I mean.

Without discipline and with a "first in/first out"-mentality nobody can
use and operate a single channel satellite.

Listen to Mode L/U or Mode V/U-QRP (channel 1) of AO-51 and you would be
surprised.

You're right Thomas,
I have nothing against FM - but beklieve it is *NOT*
a mode suitable for satellite operation.

The 'trick' on FM satellites is to get people to use good operating proceedure. It has been stated many times on various reflectors over the years that it is rather silly to work the same station daily on the FM satellites - but several operators continue to do it ... unfortunately.

John, FM is a mode/modulation suitable for satellite operation. I had many nice QSO's via SO-50. A single channel, with FM/FM or FM/SSB, may not be suitable for satellite operation. Crying "Ooooola Ooooola" is a human necessity ;-)

>

I agree. This satellites could be a nice facility to teach discipline. But every OM must be willing for discipline. Its like drive a car. If you have no discipline on the road, you will have a crash and accident. And if you have discipline and there will be a routine to make QSO's, then also John will have fun to operate over this "ugly" satellites. :-)

We have the instrument/satellite, its in our hand, how we play on it.

Hello

I have been been silently reading the mail here for a while
my name is John from the great state of Tennessee, USA
the callsign is K4ghz. You have not heard me on the birds - yet!
I am slowly putting together a sat station from my old antennas.
I worked the AO-10, AO-13, AO-16 quite a while back and looking
forward to getting in on the action on the newer birds..

Sorry...as to the topic at hand I would think something similar to the P3E
LEILA may be the answer, but it may be too much to stuff into the LEO-Ha!
Maybe I don't really know how much circuitry it used...but seems like a smaller
stripped down version should be feasible, maybe ? or that may take away from the space for
radios and amplifiers...just a thought.

Luc Leblanc <lucleblanc6@...> wrote: On 11 Oct 2008 at 9:39, John Hackett wrote:

reliable communications" convention ??.
>
> In these 'green' times there's a *LOT* of power being wasted ...
>
It take's time to understand the "using only the required amount of power to maintain
reliable communications" but when this concept is
discovered it is only to see that as soon as you adhere to it you became "alone" on the
birds as many "including the veterans" are not
doing it! Even those on CW!!! i should rather wrote "especially" i don't know why on
satellite CW make's them "unaware" of it.

By ignorance? by a lack of funds? or by something else? be my guest and send us your
suggestions.

Should we start a satellite police system? i was one who suggest this idea but what about
those who cannot afford a decent receiving
system?

2051. Peoposed scoring for a KPW award.

Yahoo group: eu-amsat
Date: 2008-10-15 08:27:39 UTC
From: John Hackett
Topic: 2051 Message: 2051

Hello Folks,
I propose a scoring system for a KILOMETERS PER WATT AWARD for AO-51 operating could be thus ...

Range (in Km) divided by power (in milliwatts) multiplied by 1000.

Example.

Assuming the range to be 2750 Km at point of confirmed contact, with power set to 500mW.

2750/500 = 5.5 x 1000 for a total of 5500 points.

(The x 1000 is just to make the final tally 'reasonable').

Any offers of Awards manager ??.

73 John. <la2qaa@...>

Hi John,

I read your proposion just now, sorry - I had dozens Emails and it was difficult to read all as my computer was faulty
the last 2-3 days.

Well, your proprosion about this Award is perfect, your combination [Km/mW] * 1000
is a brilliant idea. However I have a question about:

how the award-manager is possible to know if the Power assertion is true ?

For example, If someone used 3 Watts and he said 0.5 W, for the Award manager it's impossible to confirm if the power was
0.5 W indeed .....and not.... 3 Watts ! This way the credibility of Award is contestable.

And right now, I can't imagine how is possible to confirm the output power .

Any idea?

Hi Mak,
Well, in the G-QRP club a Gentleman's agreement was an agreement between Gentlemen (!) - that is to say, we accepted the word of a Gentleman.

No "documented" proof required, we relied on the fact that the claimant was telling the truth.

Let's face it, anyone who cheats and lies about such a thing is a real !!!! loser and *TOTAL* idiot, or, to use a Royal Signals phrase ... a right tosser !!!.

I sincerely hope that satellite operators would *also* be such Gentlemen ... yessssssss, I know, some are more Gentlemen than others - but like I've said many times ... one chooses ones'self what kind of operator one is ... (just replace "operator" with "Gentleman").

I took the liberty of batting this over to the group so they could see what's "brewing".

2054. Eagle. Is AMSAT thinking the Unthinkable?

Yahoo group: eu-amsat
Date: 2008-10-15 12:29:25 UTC
From: Allan Copland
Topic: 2054 Message: 2054

Hi Folks,

I've been looking through the AMSAT Eagle pages but try as I might, I can't find anything on the subject of batteries.
http://www.amsat.org/amsat-new/eagle/EaglePedia/index.php/Main_Page

Perhaps I've missed something, but could it be that AMSAT are thinking the unthinkable? Leaving the battery behind? For sure you'd want battery backup for the all important IHU and magnetorquers, it's positively essential to command the bird, but the transponders are another matter.

In a LEO bird, you don't really *need* a battery for the power hungry transponders, but you do for navigation and control, because without power for those, the bird would effectively become useless without the ability to keep the panels illuminated. So long as the short term power 'ripples' caused by the bird's rotation can be smoothed out, there is little real need to carry a battery capable of supporting the transponder(s). Thinking about it, there should be more power available to the transponder without a battery on board .. because batteries are inefficient beasts.

The papers do note a BCR but BCR's are in large part MPPT trackers (maximum peak power trackers) to get the most 'bang for the buck' from the solar panels. They don't *have* to drive a battery.

Batteries have been the bane of many satellite missions, both amateur and commercial. A07 is semi-operational *because* the battery failed, as most eventually do. Good battery management can do wonders for the life expentancy of a satellite in orbit, but all batteries are doomed to fail. It just takes a little time.

It seems to make very little sense to lug a large and fairly unreliable battery into a Molniya orbit when the alternative is to have plenty of transponder power available so long as the bird isn't in eclipse.

It seems quite a small price to pay to trade for a much longer life expectancy.

Of course, perhaps a battery *will* be on board. personally I hope not!

Hello John, K4GHZ

I'm also QRV since AO-10. I operate all HAM satellites, except mode U/V
in SSB (AO-7 & VO-52) because of my old rig, a Kenwood TS-711E and TS-811E.
For the TS-811E I have no CAT available.

A "modern LEILA" can be realised in DSP for example in a
SDR-transponder (SDX). Today the "circuitry" is virtual
programmed in software.

Topic: 2051 Message: 2059

Hi Luc,
See my later post - where I say exactly the same thing.
It's a question of honesty and pride but of course, in the real world, you'll always find one idiot who'll blow his own trumpet by cheating.

Personally, (naive, you might say) I support the *Gentleman's agreement*.

My intention was of course to create a "challenge" and thereby
(hopefully) raise the interest and standard of operating level on AO-51.

The technique of switching the brain into stand-by mode/pressing the PTT and just "warbling" into the microphone whether you can hear the satellite or not is a bit too dull to retain the interest factor, I thought the "challenge" aspect might allow operators to getat least a couple of brain cells "orbiting" around inside the skull.

If everybody cranks down the power it's going to make it a *LOT* easier to get more throughput and it will go a long way in combatting several stations all calling CQ at the same time.

Of course, the time-homoured LISTEN BEFORE YOU SPEAK applies even more on FM ... likewise, don't TRANSMIT if you're not RECEIVING anything . full duplex *IS* an advantage.

One of the best things a GOOD operator does is to leave a slight pause between over to allow any low power or even emergency stations to get their callsign into people's attention.

Giving your call followed by "Portable" (or in my case, IOTA 36) ought to raise some interest.

We really *DO* need an awards manager in EU-Amsat. C'mon, stick your hand up if you dare.

Hello all,

just I wondering about the FM-Repeaters around Europe. Here in Greece, we have a lot of... Repeaters.

Unfortunately.

Thus, the "step" is 12.5 KHz and the last repeater R7-B on 145,787.5 MHz it's just 12.5 KHz down of ISS Downlink !

Due to Doppler effect (+/- 3.5 KHz on VHF), sometimes is necessary to retune the receiver 2-3 KHz down of 145.800, at 145.797, so the difference between R7B and ISS-Downlink is not 12.5 Khz any longer, but just 9.5 KHz.
As the repeater is placed on the mountain's top is extremely strong 9+60 ++++ on a wide area, and many of us we have desense on ISS downlink - even if the filter on our receiver is "sharp" enough for 12.5 KHz step.

Have you any similar problem on Europe? What is the current situation in your countries?

I would like to read your comments.

The United Kingdom has a number of repeaters on RV63 (145.7875 145.1875 MHz), see

http://www.ukrepeater.net/channels/rv63.htm

As you point out it's inevitable there will be some interference issues for those living near to those repeaters.

HI Mak

If you listen my recording of the ISS pass what you hear near the end is a "weak" pager intermod. when the preamp is ON the QRM became
S9+60!!! The only one amateur apparatus problem is an old packet node still in use at 145.790mhz and i don't know who still use that
system? It is a problem only when i beam towards the node site but only weak carrier are QRM'D by this packet node.

P.S. The recording is in loop on my web page.

AO-51 operators ... FYI.

QRP could also signify "Quite Remarkable Power", see below.

73 John. <la2qaa@...>
.....

Good Evening everyone....nice to take a break from politics, etc.

On tonight's AO-51 QRP pass at 2330z pass, I was using my ever-faithful Icom 2AT as an uplink. At 1 watt, I was pretty amazed at how good it sounded in the downlink...and was able to work Drew, KO4MA, Dave, VP9/G1OCN in Bermuda, and Paul, N2BX.

Tomorrow night's pass I'll be trying the low power setting: 100mW.

73 de John KB2HSH
.....

I was able to work AO-51's QRP transponder yesterday with 500mW and a homebrew antenna - 3 element yagi on 2m and 5 element on 70cm. I need to get some kind of portable recorder now, for recording the passes - I missed the chap's callsign twice due to local (acoustic) noise. EA3 <something>

A lot of operators are quite surprised to learn that the human ear can detect sounds at *VERY* low levels - (depending on the pitch) ... providing one knows that there's something there to listen to - (ear and brain in tandem is an excellent detector).

On the other hand - foot - ear ... if one only expects white noise one will usually hear precisely nowt - (nothing - but white noise).

Certain amateurs are *NOT* renouned for using their ears ...
(I won't mention any particular country).

An old Royal Signals trick for detecting extreemly weak sounds is to cock the head at 90 degrees to the source of the sound, open the mouth ... (I am *NOT* kidding) ... almost turning the head and ear mechanism into a resonant cavity - (microwavers will recognise the phenomena) - try it and you will be surprised.

If nothing else, the psychological effect works.

A far more useful/practical technique when operating satellites is to "listen before you speak".

(Whadd'ya mean !!!!, you already knew that).

Hi Trevor, Thanks for the reply. I did read the above for myself, and 'cryptic clues' aside.....I also read...

Note: EaglePedia is no longer being used by the engineering teams. Due to support issues and suitability, EaglePedia will NOT be used during the progress of the Eagle or ACP development. The AMSAT Project team is working on new documentation resources at the present time. Rest assured, documentation will be made available to the public as the projects work. AMSAT aims to provide openness and transparency throughout the engineering process. 73, Dave, AF6KD (ex N0TGD).

AMSAT also mentions
IF batteries are flown in the following URL.
http://www.amsat.org/amsat-new/eagle/FuncReqRev1.php
In case you miseed that one, it says..
>3.0 Thermal Control
>
>3.1 IF batteries are flown, battery temperature should not exceed a -
>15 to +15C range.
>
>3.2 Under all conditions, electronics module temperature should
>remain from -25 to +40C

....which led directly to me to asking the question I did.
The 'facts' seem to depend pretty much on where you look for information. AMSAT or AMSAT.. the choice is yours!

Hello Mak

Only my personal comment: 145.7875 MHz (RV63) is within the IARU
regulated range. I think, Doppler effects could not be respected
by IARU for band planning.

If you have problems to receive ISS, I suggest, you build a group
of satellite ops and contact the repeater-club to solve the problem.

Hello Thomas,

yes, I agree , I did not say that the repeater is illegal, of course is within the regulations. Just I was wondering about similar problems around the world. And as I read, they have similar problems also in other countries.

Therefore, I think this frequency , on the "knife's edge" of *Lowest* Satellite portion of VHF Satellite subzone, it is not the best choice for ISS downlink.

I think it should be easier for all a bit higher, at 145.825. I remember that, ISS was active for a while on 145.825 without similar problems. It was much better there.

Anyway, thank you all for your comments.

Hi folks,

I remember a time ... long long ago
I made my first attempts with AO-13 in 1993.
Using 2Watt over 25m H100 coax and 10ele. horizontal indoor, I managed
several QSOs that day. The 2m was also indoor. The pictures on my page
were taken after that time, so there you can see the good antennas!
35000km, about 20Werp, single small indoor ant. ...

If there is no "big gun" pushing the AGC, it works !!

Be careful with the birds !!

Hi,

I believe that Richard is a transfer passenger like every other paying guest to date. He will most likely return in the next Soyuz flight to Earth. Often transfer passengers are in space for around a week.

ISS uses the Soyuz to ferry crews up and down so when two of the astronauts are due to return after their time on station, they sometimes return in Soyuz alongside a paying passenger. There is always a Soyuz 'lifeboat' docked to the station, and returning crews and guests always use the oldest Soyuz. That way, a constant supply of fresh craft is assured.

Hopefully some radio-activity can continue after he returns to Earth. Many (if not most) of the astronauts/cosmonauts that fly in ISS are licensed radio amateurs.

Hi Simon.

The same sort of financial 'splash' could alternatively have funded a
sizeable mixed fleet of MEO's or LEO's for those interested in other
areas of amateur satellite activity. Have you ever considered how
useful MEO is?

http://www.g0mrf.freeserve.co.uk/MEOSAT.htm
should give you an idea.

MEO's could do most of what HEO's can. What's more, they could be far
less expensive.

Dear AO-7 Bandits,
As most of you know, I've always been QRP on AO-7 and due to the mountains very often used them as passive reflectors - using knife edge propagation ... conditions permitting.

However, due to the stringent antenna restrictions imposed on me recently and the dismantling of the satellite array I now have to reduce power even more and utilise an Arrow aerial indoors fromt a basement apartment ... surrounded by mountains.

What was previously a "challenge" ... has now become a *REAL* challenge, QRPp on AO-7.

(One of my DXCC's is for QRP so don't laugh at me just yet).

I expect to be QRV by Wednesday or Thursday so if you hear somebody knocking - it'll be me.

Good news Joe ?? (K3SZH) ... put'cher cans on mate and have a lissen on the usual QRG.

Got that Mak (SV1BSX) ?? ... and Jimmy ??.

Hello Florian

Richard Garriot will stay on board until 23. October. He will leave
the Kenwood SSTV communicator on board but its batteries are empty
(as I know). This SSTV gear can not be plugged into the board power
supply system. But they have the SpaceCam1 system from Miles Mann on
board, see http://www.marexmg.org/.

Hi Folks,

I was just making two simple points.

1) MEO is very useful... and should be cheaper than HEO while still
offering DX potential..
and
2) no bucks.... no Buck Rodgers.

MEO should certainly be worth a serious look by those who make
decisions for the membership.

Michael DH5MK,
Regarding entries in the AO-7 log.

Emily (W0EEC, now N1DID) and I decided that stations could, and would be encouraged to enter their callsign even if they didn't have an actual QSO ... providing they were using the satellite transponder - (that is to say ... hearing their own downlink) - this would allow us to track- (pun intentional) - 'ACTIVITY' on the satellite.

My earlier comments were directed at the stations who were adding to the log to get "points" for phantom QSO's when they wern't even on the satellite.

Therefore ... the two stations I was referring to were cheating ... while UA9CS and other 'callsign only' entries were *NOT* !!! cheating.

I posted messages on the Amsat-bb as well as the EU-Amsat reflector several times stating that the log was *NOT* designed to be a "points" table ... it was/and is an *ACTIVITY* log.

I hope this mail appeases your obvious dissatisfaction Michael.
I make no apologies for the considerable times I spent in hospital in the last 7 years.

The latter part of this mail is CC'd to the group, since it is of general interest with reference to entries into the AO-7 Resource Page Log.

For common interest, I retired from administering the log last December.

Regards. John. <la2qaa@...>

It is not in my usual habits to act as a devil's advocate...but if we want to see another marvelous experience as the one conducted by
Richard Garriott W5KWQ did we will have to wait for the next Ham space tourist with 16 millions to spend on a ride?

As Nigel says if the guys are too busy having to work for earning their crust and paying the bills or as Kenneth says they got busy with
their Earth observation photography over North America or as i said in a past thread "making soap bubble experiment ". I don't know what
the next plans will be as this one seems to be put in place when the stars and planets conjunctions and alignments where favourable!

Again i have the greatest respect for what's the guys are choosing to do in their spare time in space, but i'm only questioning myself on
the outcomes. Who will be the next HAM millionaire to fly in space? Still don't know why Bill Gates never ask for a ride yet?

P.S. Just remember "It is not in my usual habits to act as a devil's advocate.."

2096. Beginner and FO-29

Yahoo group: eu-amsat
Date: 2008-10-24 11:52:23 UTC
From: Chris Bryant
Topic: 2096 Message: 2096

Hello everyone,

I'm new to using satellites and in the process of getting equipped. I've had a read around and plan to put some modest 2m/70cm/23cm/13cm antennas up on the roof next to my 3cm dish (once I've sorted an elevation mechanism). I'm most interested in the L and S bands though I'll start with V/U to get the hang of it. I had just got sorted for U/S on AO-40 when it disappeared :-(((.

While I wait for stuff to arrive and to get the time to build the antennas (I'll have questions in a later post about them) I was having a listen to see what I can hear on U with my 6/2/70 vertical (no preamp, 10m of RG213). AO-51 is often audible but without any real copy, no sign of SO-50, AO-27 or AO-16, but I was pleased I can hear the FO-29 beacon almost horizon to horizon peaking S5 on reasonable passes. I've made a couple of attempts to raise it with 15W of CW but not heard anything of my own signals. I have heard a couple of FM QSO but again too weak to resolve.

My questions are:

1) Can I realistically expect to make any contacts (CW/SSB) with this sort of gear, or should I put the time into sawing up aluminium?

2) I understand FO-29 is inverting: does this just mean LSB to USB or is the whole passband flipped so 145.9 up becomes 435.9 down?

From: SV1BSX
Topic: 2096 Message: 2097

Hi Chris,

well, it's possible to manage a few QSOs by using "unusual" antennas like your vertical.
But even if we can say "yes", that is for just a few QSOs - nothing more.

The main problem by using a multi band antenna is the desense. In general, if the antenna using a common coaxial cable for both bands, usually you have desense and especially
on Mode-J (FO-29), that is very strong (sometimes).

However I remember that, I have managed a few QSOs on VO-52 which is very powerful, just by using a GroundPlane. But is not easy and in any case this antenna has serious limitations on Satellites, as a vertical antenna is omni-directional, without enough gain, without enough directivity.... big disadvantages for Satellites.

On the other hand, if you can hear the beacon 5 S units, that's great and almost... unbelievable to me ! On this case, it might be you can't heard you
return signal just because you had ignored the Doppler-shift effect.

The FO-29 has inverting transponder, that means LSB-uplink, USB-downlink.
And yes, the bandwidth is also inverting.

Try that:

Tune your receiver at 435.850 USB (middle passband).

Tune your transmitter not at 145.950 which is the respective of 43.850, but at 145.960 (when the Satellite is very close to AOS) and by reducing your Uplink frequency slowly and smoothly down to 145.950 till to TCA,
looking always for your return signal on 435.850.

Repeat again and again this cyrcle, with Downlink frequency stable on 435.850
and by covering this space on Uplink between 145.960, 959, 958, 957..... 950 several times.
If your TX is strong enough for the Satellite-receiver, you will hear your downlink signal on 435.850.
If you can not hear your return signal, probably your signal is not strong enough in order to have access on Satellite.

Hope this helps you. If you need anything more about, feel free to ask me.

73, Mak SV1BSX

Thank you, Mak for your helpful advice.

I will try your suggestions when there is next a good pass for me.

> The main problem by using a multi band antenna is the desense. In general,
> if the antenna using a common coaxial cable for both bands, usually you have
> desense and especially
> on Mode-J (FO-29), that is very strong (sometimes).

Yes I see this - I have a triplexer in the feeder but I cannot run more than about 15 watts output on 145MHz without obvious desense, and I suppose it may be happening with lower power even if I don't hear it. I could put a coax stub filter in the feed to the receiver to help with this. I will check to see if I can hear the beacon while I am transmitting, that should tell me if I have a desense problem that I don't hear.

>
> However I remember that, I have managed a few QSOs on VO-52 which > is very powerful, just by using a GroundPlane. But is not easy and > in any case this antenna has serious limitations on Satellites, as > a vertical antenna is omni-directional, without enough gain,
> without enough directivity.... big disadvantages for Satellites.

I will try for VO52 as well with my simple setup. I had not thought about this satellite because I am not intending to arrange a decent antenna for 145MHz (like for DO-64) because I really want to try L and S bands and I must keep my antennas small - at the moment people think my dish is for the TV (even though I do not have one in the house!) so they are happy with it ;-)

> On the other hand, if you can hear the beacon 5 S units, that's
> great and almost... unbelievable to me ! On this case, it might be
> you can't heard you return signal just because you had ignored the
> Doppler-shift effect.

I was surprised as well, until I thought about the difference between FM and CW, I think it's at least 10dB on S/N. The antenna is a colinear on 70cm so it should have some gain...

>
> The FO-29 has inverting transponder, that means LSB-uplink, USB-downlink.> And yes, the bandwidth is also inverting.

That may explain why I heard nothing

> Try that:
>
> Tune your receiver at 435.850 USB (middle passband).
etc.....

Thanks, I will try what you suggest. But I know the answer is to get the real antennas up there.

Any news about P3E or EAGLE? Aside of the banquet and the various lunch? As David ask it seems that this group is sunking and i'm not sure

the internal reorganization will be done at the right level eg: "there are some shortages of people with particular skills, due to many
factors." Did anyone ever think that the AMSAT-NA old fashion undemocratic structure and the family affair BOD is not the actual main
problems source. If ">These things happen to people, organizations, and economies" there is ways to have them changed? We have one of this
way actually in the making where November will give us a clue in the right direction!

Did we can do the same at our "HAM" level? could be are we too old or too conservative to make the necessary moves? IMHO we should expand
our vision over our continental boundaries or the main next AMSAT-NA symposium activity will be a shuffle board game! sponsored by some
Antiphlogistine Poultice company. eg:">If you get the AMSAT Journal, there is a great recruiting poster on page 23 of the latest issue"
This recruiting is not aiming the right target at all. Refocused the recruiting campaign towards college and universities with some
appealing actual argumenting will be far more effective IMHO.

A stage coach opinion...

Hi John,

today morning the FO-29 @~08.30 Z / orbit #60253 it was OK, my return-signal on downlink was very good (as usual) and the Beacon also sent TLM.

I was also active yesterday night, not at 22:08, but on the previous orbit.

I noticed nothing unusual.

The FO-29 seems to be in good shape, except a small problem on a temperature sensor which send negative values, as pointed out on Amsat-BB.

My collected TLM:

Hello again,

I noticed that the "Bus Voltage" it was too high on my 1st collected telemetry. I received also the
next pass, in order to confirm that and yes, the "Bus Voltage" is unexpectedly high (23.5V)
comparing with any older telemetry were the Bus-voltage never was bigger than 17.5 Volts.

So, except the "strange" minus temperature, have we a new "fake" value?
Or Am I missing something about "BusVoltage"?

TLM rcvd @29Oct2008, 10:10Z, orbit#60254

2109. ISS crossband repeater active

Yahoo group: eu-amsat
Date: 2008-10-29 17:15:45 UTC
From: st2nh
Topic: 2109 Message: 2109

Kenneth, N5VHO reports that astronaut Mike Fincke, KE5AIT activated
the U/v crossband repeater onboard the ISS on Tuesday.

Enjoy while it is up.

Reminder:
The uplink is UHF (437.800 MHz) which can have up to 10 KHz of
Doppler either side of the center frequency.

Downlink is 145.800 MHz.

No PL tone.

Hi Dave

You make me remember the time just before the first cellular phone come on the market they where quite expensive 1500$. Many ham club base
their recruiting on the "phone patch" a FREE and easy available look a like cellular push button phone... Membership increased by a factor
of 10 here but if i'm looking at the 2008 membership theses new "push button hams" disappear in thin air!

I previously wrote about AMSAT-NA recruiting ideas" This recruiting is not aiming the right target at all. Refocused the recruiting
campaign towards college and universities with some appealing actual argumenting will be far more effective IMHO."

There is no need to have spectacular stage effect to attract. Just make small move around your community. It takes a very small amount of
very small things to show the crowds what's HAM radio is about. I just come out the scout jamboree and look at my web page
www.qsl.net/ve2dwe it takes a straight CW key on one side and the ISS with SSTV pictures on the other to have young folks making their
first contact with ham radio.

P.S. the newspaper article is in french if someone needs a translation just ask for it.

From: Luc Leblanc
Topic: 2114 Message: 2114

If your PC's are not making the change yet just remember we are now on EST since 0200 November 2 and you have to change the UTC off set in
some tracking program to -5 (those on EST)

On a lighter note you can check on this web site for those who does not like going out work in the dark. It will give you a boost in light
if you are sensitive to the lack of light especially in the first few days. Theses light depressions remain normally 2 days and things will
start to improve afterwards but you should take the appropriate measures and steps as going to bed early and stop taking coffee for the
next 2 days.In short don't be a slacker!

http://www.youtube.com/watch?v=CcEiR01QK7o

P.S. The frequency of the station is 96.9mhz it is in range here at my QTH with only a MP3 combo FM portable tiny receiver LOL

A proud US back yard humouristic neighbour!

HI Simon,HB9DRV
Using HRD satellite tracking with a home-brew CI-V and hamscope
software .I managed to received alot of cube sat and Fo-20 CW
telemetry. doppler shift was a history with this setup!

For Doppler correction to be 100%:

1) Make sure your computer time is correct - there's a NTP Client in the Tools menu (Time Synchronisation).
2) Make sure you entered your lat / lon correctly.
3) Get the very latest Kepler data - I use Celestrak.

I agree Simon. So I "lost" a few QSO's on FO-29. The OPs "runs"
away from my QRG on the transponder. I was also calling in the middle
of the passband on a stable downlink frequency (435.850). This means,
the uplink MUST be controlled by software in sum of 2m + 70cm doppler
(I wrote also my own program for OS/2).

If all would operate with the same procedure, with a stable downlink
QRG, then it would be easy to have SSB-QSO's via LEO-satellites.

Just for the record this one does not pass the AMSAT-NA censorship bureau. Probably the
censor in chief was not in a good humouristic mood
probably a side effect of the presidential election results or the new AMSAT-NA leadership
changes... All positives news from my stand
point.

P.S. i resend this one again on AMSAT-BB

Speaking of humour

4 guys are discussing about what it is the fastest thing on the earth. The first one says
it is the tiger as he run very fast, the second
one says it is the thought the third one says no it's the light it's faster than anything
else the fourth one says no you don't get it at
all the fastest thing it's the dhiarrea! even if you are running as fast as a tiger toward
the toilet you don't even have the time to
think to open the light that the dammage is already done...

On my 0553 EST pass the SSTV downlink audio was OK i succeed to send pictures but i was alone on the sat. The transmitter is switching on as
soon as SSTV signal is received but when the carrier is shutting down i can hear a very weak carrier just above the noise level i will try
to recorded it on spectran. It looks like some sort of beacon carrier who is always on but at a very low power or some RF is leaking
out???

Did any one in EU hear that too?

Between the Devil and the deep blue sea the other alternative is to seek funding and help on the military side. In the present financial
and organizational context (Thank's Domenico for the papers) it look like we should better start to level up our skirt a bit. Not to a
point to have a mini skirt but close to it...but not to a point to prostitute ourself as i wrote in the past on the same very subject.

Can we gain something in helping commercial interest? versus some losses in the "ham spirit"? Is it worthwhile to at least seek for all
the available options.

If we speak about the "ham spirit" my last visit at the Dearfield Hamfest show me that things are changing. From the an whole Ham family
including 2 new young 10 to 13 years old ham girls with their own HT'S and a group of teenager including two girls (HAM) in a truck box
trying to tuned an HF rig both wearing low waist jeans showing up their upper J-string part tells me the secular amateur radio conformism
seems to take some slack...

Is the ham radio spirit is defined by what they are wearing? i think not and expressing an opinion is as valuable as another one and does
not make one better or worse regarding the "Ham spirit" as the fact to wear a J-string or not.

My 2 J-strings...

>
> Who is/was the belligerent American ??.

I was running a campaign for 2 years to have them "AMSAT-BB and their BOD" implemented some sort of control eg: a moderator on their BB. it
is pretty obvious that they are censoring their BB it is far away from moderating it. We finally get rid of the poor souls by exhausting
them in their personal attack. We probably don't get rid off all the cockroaches who where infesting AMSAT-BB 2 years ago.

The past BOD under the non guidance of Rick Hambly W2GPS who failed on many issues and the non acting on theses personal attack is only
reflecting a lack of judgement and the rotten AMSAT-BB structure. It is a failing organization who still sunk in the same habits. Who will
send money to a so poor BOD minded group?

It is not a question of being a belligerent American but we JUST HAVE in front of our eyes a failing country where their financial
economical system is collapsing as well as their auto industry and so goes AMSAT-NA. Nothing will change it is always the very same folks
who run year after year on their hollow BOD.

There is at least one drop of hope they just change their commander in chief and he will clean the place with new blood. Here is stopped
the comparisons with the AMSAT-NA BOD!

On a positive note they open their president club elite group diner to all this year...the bad mouth will say instead of having a lunch
with 3 or 4 guys they prefer to at least filled one round table or two!

God bless AMSAT-NA BOD

http://www.metacafe.com/watch/433279/cocroach/ The actual BOD prefer song...

P.S. NOTE TO THE AMSAT-NA BOD: OPEN YOUR EYES ARE YOU SLEEPING ON THE SWITCH!!! IT IS MIDNIGHT MINUS ONE MINUTE!!!

Hi Thomas.

I'm totally confused as to *why* the IARU would allocate a piece of spectrum in the'amateur satellite service' to what is clearly stated as NOT and amateur satellite.

Since you obviously have such a keen interest in my personal opinions... perhaps *you* could explain this one to me?

here's a snippet for you...from Mark's site.
>As a practical matter, the COMPASS-1 team sought coordination for the use of amateur frequencies from the IARU, and obtained such authorization from them back in 2006. I've provided links to the IARU guidelines in the main article. Some have argued that the IARU aren't strict enough in their grant of amateur frequencies. I am willing to consider that as a reasonable position, but the COMPASS-1 team aren't operating illegally. They applied for and were granted the capability to operate their satellite within the amateur band. They did things the right way, and the legal way.

Right and legal? I'm sure those two points are very debatable indeed. If the IARU don't care who uses the satellite sub-bands, then the allocations become 'fair game' for anyone to use.

That is what I'm concerned about!

Yes of course, Hi Allen and group

We had many discussions about the CubeSats in the AMSAT-DL-Forum
after the launches of the first CubeSats in 2003. Norbert, DF5DP
and member of the IARU satellite group, explained it as follows
(in short):

1st: The IARU is not an authoritie who can forbid the use of our HAM
frequencies.

2nd: Its better [and an successfull effort of IARU] to coordinate
the frequencies into the 437 MHz band than to leave it uncoordinated.
Uncoordinated CubeSats disturbs our satellite band more than coordinated.

You can see that as an example for the russian Mozhayets 4 (RS-22) and
Yubileiny (RS-30). Both sends on 435.3nn MHz. THESE sats are intruders
and illegal and also not coordinated. THESE sats are also no Radio Sputniks
as we know it until RS-16 with transponder(s) and beacon.

If a new russian satellite or payload (on an Iranian satellite (Sinah-1))
launches with HAM frequencies on the downlink our whole community cries
"hurra(y)" and on the other hand we inveigh about the CubeSats. That's
schizophrenic. This are my own 2 cents (Rappen in Switzerland).

The IARU does not grant, the IARU coordinates. See also above 1st point.
This is an often disregard.

> I am willing to

I agree

> Right and legal? I'm sure those two points are very debatable indeed.
>

Right ? For universities yes, if they share the satellites experiments with
us HAMs.

Legal ? Not for companies like QuakeFinder with their QuakeSat. And not for
universities with "closed" communication protocols and experiments. For
amateur radio it MUST be opend.

> If the IARU don't care who uses the satellite sub-bands, then the
> allocations become 'fair game' for anyone to use.
>

You have the possibility to report an intruder at your local amateur radio
group. Again, the IARU is just a HAM organisation and has no authority to
forbid anything.

2143. RE: Who is/was the belligerent American ??.

Yahoo group: eu-amsat
Date: 2008-11-13 19:46:31 UTC
From: John Hackett
Topic: 2143 Message: 2143

Hello Mark,
I believed before, and I still do, that you jumped to the wrong conclusion regarding Dominico's
mail. He, like several of we Europeans are of the opinion that Amsat is selling us out - for the wrong reasons.

I believe he meant that which GM1SXX put more eloquently in 'his' posts ... I think everyone agrees that a
self proclaimed NON-AMATEUR satellite has no business in the amateur bands. I believe his command of English was not adequate to express himself, remember, English is *NOT* his mother tongue.

Amsat must accept part of the responsibility for the current state of affairs in this argument cum debate.

Amsat is *NOT* the democratic organisation it professes to be.

I might suggest people read the 13 commandments on the Observations page at <www.observations.biz>
for an overview of the general consensus of European opinion ... with a few notable "Amsat officer" opinions.

Like several of your fellow Americans have commented, I believe an apology would go a long way to pouring
oil on troubled waters. I have no personal grievance with either of the parties but since you mailed me it is
only polite for me to reply.

I also believe that everyone is entitled to their opinion - but we should all strive to keep it friendly and refrain
from personal verbal attacks.

A quick check of any decent dictionary will show what belligerent means. I believe I used the word in the
correct context under the circumstances.

BTW, I have no personal connection with Domenico - other than as a fellow amateur radio operator interested
in satellites.
Have a nice day mark.
organisation

Only Domenico can answer the above but like the sensible man he is - he's keeping quiet.

Date: Thu, 13 Nov 2008 10:40:10 -0800

Subject: Who is/was the belligerent American ??.

I received a message from Luc where you asked "who was the belligerent American???" who has been causing all the trouble on amsat-bb. I'm not sure whether you were truly interested or whether the question was purely rhetorical, but that person would undoubtedly be me. I've documented the entire episode on my blog (which I see has shown up on the eu-amsat reflector), which explains my position in some detail.

http://brainwagon.org/2008/11/12/my-tussle-on-amsat-bb/

I understand that Domenico has considerable expertise and even enthusiasm for the amateur satellite service. But he was out of line in suggesting that the proper way to get help from radio amateurs help was to pay for our satellites. I don't think this is just a matter of "opinion", we cannot accept payment for communication services, and that's precisely what Domenico was suggesting. A licensed radio amateur asked for help from a satellite that was operating on amateur frequencies in accordance with all regulations, and Domenico asked for monetary contributions in exchange.

I found that distasteful. Really distasteful.

I understand that many people hold the view that cubesats aren't _really_ amateur satellites or that they aren't _really_ entitled to use our frequencies. If that was the only argument that Domenico was making, I'd have disagreed with him (for the reasons which I outlined as my blog) but I wouldn't have responded as I did. But instead, he chose to offer the services of the amateur service in exchange for monetary donations, which was way out of line.

Apparently most people disagree with me. My email is breaking about 75/25 against/for my comments. Even among the people who largely agreed with me, they suggest that I could have done so more tactfully, as Bruce VE9QRP did. I would admit that they are certainly correct. I will consider that what I said might have been more effective had I held back the extreme distaste I had for Domenico's comments, but I do not apologize for them. I suppose I'll have to live with the characterization as a "belligerent American".

If you've read this far, thanks for the opportunity to have presented my side of the story.

Mark KF6KYI

The IARU Region 1 Conference in Cavtat starts this weekend, see
http://www.southgatearc.org/news/november2008/iaru_r1_cavtat.htm

There are a number of Satellite related papers being discussed
in C5 VHF/UHF/uW:
144 MHz increased satellite service
3400 MHz amateur satellite allocation
Microwave spectrum requirements
A new vision for 23 cm
Amateur satellites handbook chapter
Microwave spectrum requirements
VHF spectrum requirements

An REF response to the C5 VHF/UHF/uW papers can be seen at
http://thf.ref-union.org/c5_iaru_r1/08cavtat/08cavtat_c5_etat_commentaires.pdf

Thomas,
I was defending Domenico's right to express his opinion.

Whether he is a member if this group or not is immaterial to that right.

The "story" is that Dom expressed an opinion on the Amsat-bb. He was
flamed in a belligerent way by a person who obviously was of a different opinion.

I expressed the view, and maintain that EU-Amsat is above such petty behaviour.

I started this reflector to give the right of free speech to satellite enthusiasts
WITHOUT being flamed for their opinions ... something which happens frequently
on the Amsat-bb ... I believed we as a group have acheaved that aim.

We *DO NOT* ask people to necessarily agree with eachother, only that they disagree
using gentlemanly conduct.

I see no negative effect in mentioning Dom on this reflector since it is totally free and
an entirely open reflector.

I have had contact with Dom previously.

Naturally, you are of course entitled to disagree with me.

Hello John

I don't disagree. But I see an unhappy trend on this reflector, to tear
out fractions of discussions and "CCed" here. This can be annoying. It's
OK, if we can discuss about it, if we want.

Hi Thomas,
Yes, I see your point. I have deliberately omitted the word 'belligerent' from the title of this thread because that word can be easily misconstrued - and that certainly was *NOT* my intention - quite the opposite in fact.

My intention was to bring a semblence of gentlemanly conduct to an otherwise 'tatty' thread that 'may' have led to dissatisfaction among the members of our group.

Nothing more - nothing less.

Nice to see an Aurora from space. I've seen static photos taken from
space before but never an animated movie.
Watch it if you have the time. It's very unusual.

Thanks Luc for posting the link.

From: st2nh
Topic: 2153 Message: 2156

HI all 9k6 seem works fine with soundcard ! some where I have read ,It is impossible to decode 9k6 by soundcard ! but it seem ok with my RX experment from sat. And in shack TX experement was ok between 2 setup using a soundcard at one end and on the other end a TNC at 9k6 speed. I wish if some one add a module to UISS for pacsat . the only program work now with pacsat is WISP and it need a TNC . May if we have a module for pacsat for UISS we can work pacsat with the soundcard!! Here is another go with go-32 TLM? using soundcard , UISS and AGWPE. ---------- Port1 with SoundCard On COM2: 9k6 Port2 with SoundCard On COM2: Fm y-4 To -2 Via -7,,,,,-9,,-12 [20:44:49] Fm z-4 To -1 Via -7,,,,,,,-5,,-1,z-4,-7,,,,,,-4,,-4,,-13 [20:45:19] Fm z-4 To Via -7,,,,,-9,,-12 [20:45:49] Fm z-4 To -15 Via -7,,,,,,,-5,,-15,z-4,-7,,,,,,-4,,-4,,-13 [20:46:19] Fm z-4 To -14 Via -7,,,,,-9,,-12 [20:46:49] Fm z-4 To -13 Via -7,,,,,,,-5,,-13,z-4,-7,,,,,,-4,,-4,,-13 [20:47:19] Fm z-4 To -12 Via -7,,,,z,-9,,-12 [20:47:49] Fm z-10 To -13 Via ,,,,,-13 [20:47:51] Fm z-10 To -15 Via ,,,,,c,-4 [20:47:55] Fm z-10 To -3 Via ,,,,,-13 [20:48:04] Fm z-10 To -9 Via ,,,,,c,-4 [20:48:15] Fm z-10 To -9 Via ,,,,,-13 [20:48:16] Fm z-10 To -12 Via ,,,,,c,-4 [20:48:21] Fm z-10 To -14 Via -4 [20:48:25] Fm z-4 To -10 Via -7,,,,f,,,-5,,-10,z-4,-7,,,,f,,-4,,-7* [20:48:49] Fm z-10 To -15 Via -4 [20:48:59] Fm z-10 To -6 Via -4 [20:49:13] Fm z-10 To -7 Via ,,,,,n-13 [20:49:15] Fm z-4 To -9 Via -7,,,,T-12,,yz,-10*,-3,,-2,,,,,-11, [20:49:19] Fm z-10 To -10 Via ,,,,,c,-4 [20:49:21] Fm z-10 To -13 Via -4 [20:49:28] Fm z-10 To -15 Via ,,,,,n,-4 [20:49:30] Fm z-10 To [20:49:34] Fm z-10 To -2 [20:49:36] Fm z-10 To -2 [20:49:36] Fm z-10 To -2 [20:49:36] Fm z-10 To -3 [20:49:40] Fm z-10 To -5 [20:49:42] Fm z-10 To -5 [20:49:42] Fm z-10 To -5 [20:49:42] Fm z-10 To -6 [20:49:46] Fm z-10 To -8 [20:49:48] Fm z-10 To -8 [20:49:48] Fm z-10 To -9 [20:49:52] Fm z-4 To -7 Via -7,,,,S,-9,,-3 [20:50:19] Fm z-10 To -13 [20:50:32] Fm z-10 To [20:50:37] Fm z-10 To -4 [20:50:45] Fm z-10 To -4 [20:50:45] Fm z-10 To -5 [20:50:46] Fm z-4 To -6 Via -7,,,,D,,,-5,,-6,z-4,-7,,,,D,,-4,,-7* [20:50:48] Fm z-10 To -6 [20:50:48] Fm z-4 To -5 Via -7,,,,M,-9,,-3 [20:51:19] Fm z-4 To -4 Via -7,,,,J,,,-5,,-4,z-4,-7,,,,J,,-4,,-7* [20:51:49] Fm z-4 To -2 Via -7,,,,D,-9,,-3 [20:52:49] 73 de Nader st2nh www.st2nh.com --- In eu-amsat@yahoogroups.com, "st2nh" wrote: > > Hi all > today 20-11-2008 > I succeded to Decoded AO-51 BEACON using UISS and AGW PACKET > ENGINE with soundcard . > Orbit # 23.049 .max elevetion was 7 > for snapshot please see my webpage link > > http://www.st2nh.com/satellites > > here what I got:- > > Port1 with SoundCard On COM2: 9k6 > Port2 with SoundCard On COM2: > Fm PECHO-11 To PBLIST [20:44:54] > PB: Empty. > > Fm PACB-1 To TLMS-1 [20:45:03] > C0:0D C1:44 C2:76 C3:2F C4:04 C5:00 > > Fm PACB-1 To LSTAT [20:45:04] > I P:0x13A8 o:0 l:27314 f:27325, d:1 st:6 e:d1 > 73 de Nader st2nh >

2157. UISS, GO-32 & 9600pbs

Yahoo group: eu-amsat
Date: 2008-11-22 08:58:46 UTC
From: John Hackett
Topic: 2157 Message: 2157

Hello Nader,
I was extreenly interested in your discovery that the UISS program decodes 9600 bps from GO-32 - (and AO-51).

I lost interested in packet radio in 1990 when I moved to Frei Island.

From myQTH, surrounded by mountains, it was nigh on impossible to work the Pacsats in LEO and of course (for the same reason) the ISS was a non-starter for me, 'm too far north.

However, I just checked - and I see that GO-32 'is' workable from my QTH occasionally. I know how to modify rigs for 9600 bps but my question is ...

Is it possible to make some sort of relatively simple tuning indicator for 9600bps ??.

Tone decoder, centre meter, LED's, old 1 inch tube type RTTY indicator, comparator system ... I can't find any information on the net. 1200 bps is easy but I believe 9600 bps is a different matter - (I am of course showing my digital ignorance here).

Do you have any references to any circuit diagrams Nader ??.

I know you can't actually *hear* 9600bps modulation, hence my request for an 'indicator'.

I believe one way is that the white (background) noise goes quiet when 9600bps is being received.

Confirmation - (or strong denials) - of this would be appreciated from the digital experts among us.

Any advice, tips, references or relavant URL's would be greatly appreciated.

to recap ...

I'm looking for some sort of 'INDICATOR' for 9600bps signals ... (if it's possible).

73 John. <la2qaa@...>

The simplest tuning indicator is the centre meter of your (T)RX.
So you can easily tune with your sat program.

>
> Do you have any references to any circuit diagrams Nader ??.

I have circuit diagrams for an AFC for a FT-726R and a FT-736R
so you can tune without CAT via "mic-click" (up/down).

Its also possible to count the bit-errors.

In the AMSAT-UK OSCAR News nr. 88 April 1991 you can find the article "The Shape of Bits to Come" from James Miller, G3RUH. I have a German translation from it. All my literature is in German, but if you look to James' articles, you will find many stuff. He was our Guru in the 1990's.

Douglas,
Your program looks like it's *PRECISELY* !!! what I was looking for.

There'll be no weeping with this willow - (GM1SXX will 'drop' me from a great
height for that one but I couldn't resist it).

I'll put 'WILLOW' through it's paces and get back to you - just nodding yet another rig.

Have a nice day Douglas and THANK YOU !!!.

73 John. <la2qaa@amsat.org>

Homepage at ... <http://www.observations.biz>

PS.

GM1SXX is "the other half" of the comedy act, aka The Twisted Pair.
(look 'carefully' at the observations website).

Hello John
and thanks for nice comment

I think the setup over here (may) help to jump over the problem of
fine tunning.

The AFC feature on ICOM ic-910 help doppler correction and did
a great job for satellite DATA RX.

Interface here is a simple homemade keying line
and yes the RX/TX (Audio?)DATA fed direct from the RIG (ic-910)
data socket to my sound card (mike input).

OS is XP,CPU 500 ,soundcard brand is Creative Audio .
Antenna is a homebrew 12 element with UHF-PRE amp.

The Brand Interfaces have an isolation audio transformers (1:1)
or optic IC ,that may prevent or ruin the flow of the data at
9k6 speed to the soundcard.

I wll test my Microham keyer interface to see
and compare between direct feed and isolated feed.

Using AFC feature with AWGPE and adirect data fed ? were
a one man show over here .

best & warm 73 de Nader st2nh

STOP !!!! complaining.

Since my recent aerial restriction was imposed, this !!! is what I have to work with ... (see attached pics). A ground floor flat - (apartment, if you're from the wrong side of the pond) not even access to a loft. Oh, and did I mention, I'm blocked by *HIGH* mountains on three sides.

William of Occam (12th century) stated ... "Tis vain to do with more that which can be done with less".

La2qaa of Frei Island (21st century) stated ... Old Bill wasn't operating satellites in the 12th century so he was talking through his RRR's

Hi Nader,
Maybe Hotmail (in it's wisdom?) took it upon itself to delete the pics
"in case" of security problems (despite the fact that of course I ran them
through the same security software Hotmail uses) !!!.

I'll attach them again.

The 'snowy' one is what it looked like before.

As for wives ... you'd have to learn Russian !!! to communicate ... and even then
it's a game of chance (!!!) have a look at the last pic ... (man & woman).

You'll notice that all the rigs are *AT LEAST* 22 years old so the "boxes" are homebrew
auto-doppler tuning etc.

Hello John

I observed GO-32 last weekend. It is sending RAM data in a non-AX.25 format. If you have a hardware TNC and you type in "TRACE ON" in a terminal program, then you can read the packet. Actually its not possible to forward a message.

Hello Thomas,
Thanks you for your repy. You saved me some work. I see it would
have been quite pointless for me to 'mod' my old rigs for 9600bps.

I note that AO-51 is 9600bps capable in mode V/U but I seriously doubt if the
controllers will be switching to this mode. I don't have any 23cm gear anymore so
AO-51 is also a non-starter.

I did keep my homebrew S-band downlink gear but I don't use that these days either.

I was intending to try some digital stuff ('communicationg') but apart from a few odds
and ends of TLM there's nothing to work anyway.

The upcoming PCsat is also a non-starter (like the ISS) from Frei Island.

As Drew Glasbrenner pointed out, there *is* an occasional 6 degree elevation pass ...
but when the lowest mountain south is 28 degrees, there's not much hope for a contact
with the ISS.

Thankd you for replying Thomas.

Hello John

You can modify your rigs for 9600 still, if you have a receiver for 2m
and you can modify it also for 9600 (discriminator). For my old Icom
IC-R7000 I have an external IF-amplifier at the 10.7 MHz IF output with
an output with pure LF at the discriminator. The IC-R7000 is also my
main satellite receiver.

For 2m uplink I modified my old Kenwood TS-711E with an varactor input.
To control my rigs in 9600 packet, I tune both on the same 2m QRG and make
an HF selfconnect, the RX without antenna. My TNC is a Heathkit HK-232
(PK-232)
with switchable G3RUH modems for 1200 bps Fuji mode and 9600 bps FSK.

You can see, I have also an old rig ;-)

My Icom IC-1271E is also not 9600 ready.

>

Topic: 2168 Message: 2172

Hello again Thomas,
My main point was that there's nothing 'digital' that's workable
from my QTH with the gear I havem these days ... aart from copying TLM.

I think the last time I worked a digital satellite must have also been UO-22 ...
and that was with a modded TR-851E (Kenwood) at the varactor for the downlink
and an FT-290 (discriminator) for the uplink.

The last time I *consistently* copied 13cm was from DOVE but as you can imagine, at
that frequency on a LEO the doppler was ferocious!!! ... (hence my home brew doppler
correction). AO-13 and AO-40 was a walk in the park !!! in comparison.

I can see me biting the bullet and making a /P "appearance" on AO-51 for my second ever
QSO on that satellite.

My personal favourites were FO-20 and RS-10. The RS series of receivers were extreemly !!!
sensitive. I use to do a lot of "propgation" monitoring using the robot on CW.

It was a lot of fun before ... but these days I find things have become a bit of a bore.

It's amazing what a bit of inginuity (and downright tenatiousness .....GM1SXX) can do.

That and a bit of help from my friend Percy ... (perseverance).

When I *RIPPED* down the aerials due to the newly inposed restriction. I thought my Anne Logue satellite days were over.

Never having being 'excited' by single QSO FM (on a satellite) I thought "that's yer lot" John matey.

However ... hearing such rot!!! regarding the power to work AO-7 (mostly from the American side, I might add, something I believe is entirely due to Amsat's FM policy) I decided to see just what 'could' be done.

Having what is now IMHO a worst possible case scenario, that is, 22 year old rigs (no CAT interface for doppler tuning), a ground floor flat without access to loft space, total aerial restrictions outside, surrounded by mountains on 3 sides and a maximum output power
of 5 watts on CW.

I still managed to contact F6 something-or-other this morning. Presumably, my uplink on AO-7 mode-B was readable to those whom actually have a receiving aerial because two stations answered my CQ. The 7 element Arrow giving me a giant EIRP of about 40 watts ... however,
my downlink signal, just 3 elements on 2m, indoors !!! definately left a *LOT* to be desired.

I could hear myself - but then, I 'knew' I was there. Two stations did answer but since they both answered at the same time (err ... I forgot, what did you say full duplex meant?).

I ask because they 'both' continued to reply to La2qaa/QRP ... the only thing I managed to copy was de F6 some-thing-or-other ... when I sent an interogatory (QRZ) they both disappeared.

I waited a while to see if either of them would try again but they didn't.

As I have mentioned so many times before, you really *DON'T* need 10 elements and an 'effing' *BIG* BRICK to work AO-7 - (or any other of the LEO's for that matter).

I do apologise for the rather offbeat keying, my keyer is made from 2 x back-to-back computer microswitches taped to the palm of my hand ... BECAUSE I WAS WAVING THE AERIAL ABOUT WITH THE OTHER HAND ... of course.

For bthe affluent on the other side of the pond this weekend, enjoy yout turkey. For the 'moderately' affluent, enjoy your chicken - for the remaining ... enjoy you egg.

Happy Thanksgiving.

Relax !!!, the Europeans ... the geese are still getting fat.

Hello Folks,
A good and valid point by Mike re: satellite QSL details.

Lets try to make this group an example to follow ... with the required information including the satellite name and mode.

(It's not necessary with the uplink and downlink QRG's if the satellite name and 'mode' are specified).

The other criteria should be clearly marked ... date, time, location etc

correct
I have also received qsl's without basic information.
Necesary is Callsign, Date, Time - UTC, work mode ex. SSB FM etc.
Sstellite, and Sat. mode example:

To radio SW1JGW - Date 29.11.2008 -UTC 18:33 - Mode FM- Sat AO51-
Sat. mode J - RST 59
I have for example qsl card im 70cm but not marked like a satellite
mode so result that we worked in 70cm. Hi

Hi Folks,

For anyone looking for a replacement for the old Mitsubishi 23Cms 1.2W amplifier 'bricks', Mini-Kits in Australia make a cheap and effective alternative at reasonable cost. I've already built one of these and have on the bench two others under construction. be aware that these are SMD kits, so you will need basic SMD soldering abilities although none of the parts are very small.

You'll find the kit details at.. http://www.minikits.com.au/kits2.html
The kit is named EME-162 and covers 1200-1300Mhz taking an input level of +5 or +10Db (with a supplied 5Db attenuator) to +23Dbm. The kit uses a single ATF50189 Ga-AsFET PHEMT device taking 5Volts DC at 280ma. It offers 17.5Db of gain over the entire 23Cms BAND. Very useful indeed.

2188. HEO launch possible???

Yahoo group: eu-amsat
Date: 2008-12-16 10:41:47 UTC
From: Luc Leblanc
Topic: 2188 Message: 2188

Hi satellite fans

Just came out of a bad dream tonight after reading this Ariane 5 announcement?

"The 186th Ariane mission will launch two communications satellites, primarily intended for direct TV broadcast services and data networks: HOT BIRDTM 9 and W2M, both for Eutelsat.

This will be the 42nd Ariane 5 launch.

The launcher will be carrying a total payload of 9,220 kg, including 8,340 kg for the two satellites, which will be released separately into their targeted orbits."

Just note The 9220Kg payload and theses Ariane 5 figures

LEO Payload* (28.5 deg., 550 km) GTO Payload* (7 deg. inclination)
39,600 lb 18,000 kg (single / dual manifest) 15,000 lb / 13,160 lb 6,800 kg / 5,970 kg

Configuration
Core + 2 SRB + Aestus Second Stage

Launch Mass
1,570,000 lb
710,000 kg

Estimated Launch Price US $120 M

* Performance provided by Arianespace.

There is room for a 150kg amateur HEO satellite and at an US$169 per kilo a 150Kg mass should cost US $25350!!!

I'm not too quick in calculus but how the +_ millions USD P3E and EAGLE launch cost came from? integration work? shipping and handling?

I know that at the top of a Ponzi pyramid numbers added very fast but even with the worst case scenario there is something who's not added
up correctly here?

The killing question is: Is the actual P3E and EAGLE launch issues are really a financial matter? and those very high HEO launch cost
estimates are hiding something else?

If you want to see where i got theses figures go to:

http://www.spaceandtech.com/spacedata/elvs/ariane5_specs.shtml

Hi Folks.

Something is amiss I think with Luc's numbers.
The Ariane5 costs £120,000,000 and lifts 9220KGs.
By my reckoning, thats 12000000/9220 dollars per kilo... or $13015/KG

For 150KGs that pans out at 1,952,777 US Dollars.

That number of course is a gross over-simplification based only on
cost/KG and neglects *all* other costs such as storsge, commisioning,
testing, transport and the cost of an ASAP or similar spacecraft adaptor.

Well Luc, actually they don't. A rocket is a means to an end, not the
end in itself. A typical rocket's mass only includes small percentage
of payload mass, yet the payload is what pays the wages.

ERGO the cost of the mission is all about getting that payload (and
not the rocket) into orbit. The rocket itself is just useless (but
essential) junk that 'tags along'. Of course the rocket is very
important... but launching the payload is what the cost is really about.

But I know.. you were just playing 'Devil's Advocate'.

Sure, a fine idea...apart from the reality that these rockets are useless. Rather akin to believing that Mr Branson's DIY private venture 'spaceplane' might somehow dock with the ISS.

I don't want to put a dampener on the Christmas spirit but lets face the unpalatable facts. Rocket launches cost money, BIG money, as Luc has rightly pointed out, and the days of AMSAT getting bargain-basement launch prices or free launches are long gone. There's *way* too much competition from other users. Unless these AMSAT groups can find real money... of the sort paid by commercial customers for commercial launches, the hardware that's currently being built will most likely sit on the ground and rot. Not what you want to hear I'm sure, but thats the reality.
There's just not enough money doing the rounds for all the projects being built, and especially AMSAT-NA and AMSAT-DL's large and ambitious birds. Going to Mars? That's never going to happen in the current climate. Nice idea of course, but it would take nothing short of a miracle for it to be practical.

Perhaps it's now time for a radical re-think of what AMSAT does and how projects are funded. There just ain't enough money going around.

Perhaps other avenues should be explored such as fairly modest 'parasite packages' carried by other missions, as with the excellent RS10/11 and RS12/13 birds. Sure for *some* people, a HEO is desirable, but is it practical? Well, only time will tell.

Have a good holiday over Christmas and the Yew Year period.

Very true, apart from AO7's battery being shot and the solar cells extremely degraded by accumulated radiation dose, but have you considered this.

Some technology 'dates' very rapidly and in particular digital technology. What is relatively revolutionary today (such as DSP) will be 'old hat' in just a few years hence. The technological investment becomes obsolete rather quickly.

Sure, you can launch a bird that's been kicking around for a few years, but it'll have old technology on board and furthermore ... how will the batteries be? I would hope they wouldn't be anything like the ones flown on AO7... already 'second-hand' when 'new' and only 'one previous owner'.

OK, I doubt if they'd really fly a battery string that's been sitting around for a long time but the technology part is certainly true. What is now new, quickly becomes old. Launching 'legacy' hardware is not a good way to do business.

Would you want to spend your money at a shiny 'new' car that's been in storage for a few years? I very much doubt it. I think you'd want a NEW one with better bells and whistles.

Probably but no one never show the crowds any launch submission from all the available sources even the one in the former USSR (The greath
evil". With the present economic world crisis where you can buy two car for the price of one here it could be worth the money and time
spent to look around just in case?

As someone ask me instead of writing my stuff i should send and image and as an image worth 1000 words here is 3000 attached who explain a
lot about sticking cold era mentalities and AMSAT-NA is not far of it or was of it as there is a new BOD apparently...And don't forget
AMSAT-DL remaining very silent as any silent partner!

The pics where taken not too far ago near a very huge military antenna set up "classified" but very nice to see when snorkling... the other
one refers to Shakira and Madona as some giant grass hopper animals are not too far away from humans...even us in the amateur satellite
community.

P.S. From my nature part time photographer experience folders

2200. Good News - DX pedition on Namibia from 7 Jenuary to 16th

Yahoo group: eu-amsat
Date: 2008-12-17 21:01:17 UTC
From: SW1JGW
Topic: 2200 Message: 2200

Hello Oms i would like to inform you for a new DXpedition on Namibia
Dates of operation will be from moonrise on 7th to moonset on 16th
January 2009. QTH will be in Luderitz Namibia, grid locator JG73NI.

Their main target is to activate Namibia on 50, 144, 432 and 1296 MHz
EME. At the same time they will be QRV for transatlantic Tropo on 144
and 432 and on satellite (AO-7, FO-29 and AO-51).

The operators will be ZS6WB Hal, ZS6OB Pine, ZS6BUG Dick, ZS6AC
Sarel, N7BHC Dave, HB9CRQ Dan.

A good oportunity for a New One for US

Folks,

It was writ in large (ish) letters ...

>Hi Al

>Ao-7 survived more that 30 yeas in more
>tougth condition! with hope and for sure
>more cash our HEO wll survive the delay.

Aye, but liike the would-be Bard (Zimmerman) or Dylan, if you prefer, said ...

"The times they are a-changing"

I'll grab that nettle.

I 'suggested' well over a year ago that another HEO
for amateurs was a pipedream - not least due to ...

1) Extreme cost.

2) Organisation.

GM1SXX also mentioned "the competition" - which I agree with.

Heads out of 'orbit' and feet on the ground chaps.

Yes, there are still a few "would be" promoters out there but
my comments are aimed at those operators living in the 'real'
(commercial orientated) world.

I hope somebody proves me wrong.

(Nostradamus got it wrong more times than he got it right).

Hi Luc.

I liked the photos. Radio aerials are indeed things of beauty! You
can never have too many of them.

Why so many x's? You may well ask!
As you'll be aware, it's difficult to say repeated letters such as X
and equally unpleasant to say them directly after a sibilant consonant
letter like 'S'... as in SXX. 'Ess Ecks Ecks'. It's a horrible call
in phone but much better in Morse :-) Of course I didn't choose it,
it was forced upon me by the UK Department of Trade and Industry.
Pillocks!

Here is "MY" translation of an article from AMSAT-DL web site

http://www.amsat-dl.org//index.php?option=com_content&task=blogcategory&id=35&Itemid=97

It was my best way to wished you all a Merry Christmas and a happy new year 2009 with this probably best refreshing news about amateur HEO
satellite in 2008.

SpaceX with AMSAT DL
Written by Peter Gülzow
Tuesday, 28 October 2008

This was the fourth and successful launch of the Falcon-1 rocket on September 29 2008 of the SpaceX program. It is the beginning of a new
era . This first purely privately financed launch using a liquid fuels operated rocket, which can bring pay loads into a stable earth
orbit.

SpaceX (space exploration Technologies corporation) was created of the entrepreneur Elon Musk as a privately financed starting up
enterprise for the building of a large extent re-usable two-stage rocket, the Falcon in June 2002.

On the occasion of the successful launch of the Falcon-1 rocket AMSAT DL president Peter Gülzow congratulated the SpaceX team and Elon
Musk personally for this huge success. AMSAT DL follow the activities of SpaceX already for quite some time with large interest, especially
regarding a possible co-operation and launch possibility of the AMSAT P5-A Mars mission.

On 9 October 2008, a meeting with SpaceX in the central development lab of the AMSAT DL in Marburg was organized in a relatively short
notice. Jonathan Hofeller of SpaceX was received by AMSAT DL president Peter Gülzow and Hartmut Päsler. Professor Dr. Karl Meinzer, project
manager of the P5-A Mars mission were in addition represented, as well as P3-E project manager Heike Straube. In the process of theses very
detailed discussions it became obvious and again and again clear that the guest and the hosts of SpaceX and AMSAT share a quite unite and
same philosophy and approach, and it will only lead again and again to success. Besides it was to be developed it is interesting to see
that Elon Musk has already his own ideas and plans toward Mars and there is here quite further thing in common in our goals in the present
time. In the further discussion also the technical aspects were discussed regarding possible launch configurations for AMSAT P3-E and P5-A,
with the appropriate schedules in addition. After an afternoon of very informative very positive discussions for both sides future further
deepening discussions were agreed upon. Possibly as a result of it also new perspectives for the AMSAT P3-E and P5-A Mars mission will

arise.

P.S. If AMSAT-NA set aside his Eagle funds towards P3E can we expect to have a HEO in 2009-2010? It is obvious that our German friends are
in a very advance state of completion for their HEO project. I just hope in a TRUE amateur radio spirit that all the international AMSAT'S
will regroup and support the AMSAT-DL project. It is no more a question of pride but a question of survival for the amateur satellite side
of our hobby.

Unfortunately I doubt there is a large pot of money reserved to cover all the Eagle costs. Money for past major Amateur satellites has usually been raised slowly during the period of construction and even continued to be raised after launch.

AMSAT-NA has already made donations to P3E as have AMSAT-UK, JAMSAT and others.

So far SpaceX has achieved one successful launch into a very low earth orbit out of 4 attempts. While it is certainly great news that another launcher is now available my understanding is that P3E and P5A require a launch into a Geo-stationary Transfer Orbit rather than LEO. A later version of the Falcon may well do that but the Falcon 9 has not yet been launched.

My personal guess is that when eventually AMSAT-DL announce they have found a suitable launch opportunity the launch itself will probably take place at least a year after the announcement. Since 2008 is drawing to a close without any announcements I'd guess we won't see P3E launched until 2010 or later.

Anyway lets hope that 2009 brings us the long awaited launch announcement.

Wishing you and everyone else on the list a very Happy Christmas and New Year.

Hi Trevor

I was inspIred when i read Barry Baines, WD4ASW President-AMSAT letter here is an excerpt

"Near Term Engineering Task Force. I announced at the AMSAT Annual Meeting in Atlanta that a group led by Bill Ress, N6GHZ had been formed
to review the 'Rideshare' Proposal developed by Tom Clark, K3IO as well as evaluate AMSAT's ability to develop a modularization strategy to
adapt RF packages to various structures. The committee has been diligently meeting every two weeks via teleconference to discuss future
options for AMSAT and to help structure AMSAT's thinking on future spacecraft opportunities. While it is too soon for formal announcements
of their findings, it is good to know that we have a formal group actively focused on engineering issues"

As you wisely wrote "Anyway lets hope that 2009 brings us the long awaited launch announcement" and even with the smallest amount of money
remaining in the "scrapped" former eagle project it can be of some help for AMSAT-DL who's now is the last remaining live HEO project.

Me too i was under the same very impression that "Money for past major Amateur satellites has usually been raised slowly
during the period of construction and even continued to be raised after launch" but when i read this other excerpt from Mr Barry Baines and
i quote:

"ITAR. I announced at the AMSAT Annual Meeting in Atlanta that AMSAT would actively develop a strategy concerning ITAR (International
Traffic in Arms Regulations) and related export regulations. Our goal is to ensure that AMSAT is in full compliance with ITAR, develop
materials to train our satellite builders on ITAR compliance, and to seek ways where we may continue to work with other AMSAT organizations
on satellite projects. Since the Annual Meeting, Bill Ress, N6GHZ and I have been working with an attorney who specializes in ITAR. We hope
to make a formal submission to the State Department regarding ITAR in early 2009."

I still don't believe that AMSAT-NA is refusing to cooperate with other AMSAT'S organization pretending they are part of the "AXE OF EVILS"
read this again carefully Quote "and to seek ways where we may continue to work with other AMSAT organizations on satellite projects."un
quote? Is AMSAT-DL is a terrorist refuge? is William Leijenaar PE1RAH and AMSAT INDIA threaten the US security?

If AMSAT-NA is now pretexting an US national security issue to stopped their cooperation and exchange with the all other international
AMSAT'S and as we all know this trick work's ounce but for those who are still sending their money to AMSAT-NA they should at least know
why AMSAT-NA is hiding their failures and poor judgement and actions or inactions behind a lie? Should i send the whole letter on this
site http://www.barackobama.com/index.php Trevor? (No need to answer this one in fact it is not directed at you)"

It will probably as the expression says "where the sh!! will hit he fan" but as i send a copy of my previous message also on AMSAT-BB and
as it will be also the same censorship who will stopped this one to be posted on AMSAT-BB i'm asking myself if the last change in the AMSAT-
BOD AND AT THE PRESIDENTIAL CHAIR is like an exchange of 4 quarters for a buck...

For the sake of history i will send this one also to the guy who wrote "Should you have any questions or concerns about AMSAT, please don't
hesitate to contact me" i know i'm not in the membership but if i should pay 40$ to get some explanations it worth it.

".As always, I appreciate hearing from the AMSAT membership. Should you have any questions or concerns about AMSAT, please don't hesitate
to contact me. I will make every effort to respond to e-mails that I receive, but please keep in mind that I travel extensively which may
limit my ability to respond quickly. Please know that I read every e-mail that I receive

from AMSAT members and that I appreciate every
person's willingness and time spent to share their thoughts and suggestions.

I don't want to be irrespectfull but when i read the above 3 words come in my mind BLA BLA BLA but i am accustomed as i read MR Rick Hambly
W2GPS various intervention during his too short passing in the AMSAT-NA presidential chair...I will missed him and i don't know where he's
gone as no farewell ceremony seems to have been organized for his departure!!! He's probably gone with the wind but no gales has been
reported in October in Atlanta? As an picture worth 1000 words lets us remembering one of the best my best friend... The right stuff. Just
hope he's not stuck in the fan blades.
http://n4hy.smugmug.com/gallery/1633095_oo8YD/1/79661419_JdsH6#79661419_JdsH6

As my mother ever says "If you have nothing intelligent to say shut it up" Quote "As you can see, there are a number of activities that
are ongoing within AMSAT. While we are challenged by the impact of current events, we continue to move forward in a number of areas."
I was not very polite at time as answered back BLA BLA BLA...

That's why they send in a priesthood school but i quit as i want to be Pope and i found there was not many openings!

Poor me! fool me ounce shame on me. Fool me twice shame on you! I think i'm loosing the count with AMSAT-NA...

But as someone says life is too short for QRP ;) And good luck Mr Baines as i think it will not be enough.

P.S. Mr Baines i already offer you one " to discuss future options for AMSAT" I don't know if you are a chess player but there is a part of
the game where someone yell "CHECK MATE" The sooner you admit it the faster you are able to start over a completely newer game! Playing
always on the same stick will only gets you bulbs on the hands and it can lead to deafness too (JOKE)

Yahoo group: eu-amsat
Date: 2008-12-26 12:19:49 UTC
From: John Hackett
Topic: 1318 Message: 2213

Dear Amsat friends,
While having many years experience of analogue
satellite operating, I'm the first to admit that I'm a *TOTAL* ignoramous
regarding 'digitalis horriblis' ... so please don't 'smirk' at my question.

Is the telemetry from AO-51 transmitted continuously?, or only at certain
specified times? ... on 435.150? ...

I 'could' probably find the answer to these questions by 'Googling' ... but
isn't the Amsat-bb here for this precise purpose?.

Answers on a $100 note please, to <la2qaa@...> ... failing the
C note, an e-mail *WILL* be just as appreciated.

In anticipation of your answers - thank you.

Wishing you all a happy and prosperous 2009.

Hello Nader,
Yes !!!, I followed your recent posts with great interest and
I must admit, they are ther very !!! reasom I'm starting to get interested
in telemetry again.

I did work the pacsats a couple of times but it was a long time ago and I've forgotten
everything.

I used to use a PSK-1 modem ('donated' by G7HIA) - if you remember those? ... with the
original "buzzsaw" modulation. How it "tracked" the downlink was a constant fascination for
me.

KB2BD's 'Pacsat' modem uses a similar system.

I first copied 2.4Ghs on Dove ... my-oh-my, doppler at 2.4Ghz on a LEO is ferocious !!! ...
and this was with manual !!! tuning on the FT-290 (MK 1)
as the back end of the converting system ... (75% homebrew).

It was a lot of fun. These days, it's all automatic.

2217. Sat/EME DXpedition to Namibia

Yahoo group: eu-amsat
Date: 2009-01-02 16:21:16 UTC
From: dl5rdi
Topic: 2217 Message: 2217

Hello,

I heard about the DXpedition to Namibia which will be also QRV on satellites. Unfortunately none of the current satellites gives an oportunity to make a contact from JN58xx to Namibia via AO7 or FO29(I think these two have the best coverage. Or is there any satellite with a "bigger" footprint ?

Good luck for all sat-DXers in southern europe !

73 and hope to meet you on satellite

My profound apologies to Igor UA9SB and Zlatko 9A2SB for the *MUCH* !!!
to be desired CW on AO-7 this morning.

I was using a computer microswitch in the palm of my hand as the keyer ...
see ... <http://www.observations.biz/Observations_from_Norway/observations_14_06_2008.htm>
... with just 2 watts of RF to the arrow antenna ... INDOORS !!! - (snowstorm outside).

Naturally, as an ex: professional Royal Signals telegraph instructor I was thoroughly
ASHAMED !!! of the standard of the CW this morning - but now
that I know I 'can' get out with this minimalistic equipment I'll set up a proper
keyer and get 'back in the game' ... (due to the aerial restrictions, I havn't
had a QSO for 6 months).

At least from the old days, Igor knows I 'am' capable of transmitting the odd few dit's and
dah's strung together without error - assuming a genuine key but hey !!!, the microswitch
did work - albeit a bit like a drunken sqaddie but it did
provide QSO's on AO-7 with the absolute minimum of equipment in a worse-case situation.

I really do feel for that American chappie last year who claimed one needed
a BRICK amplifier of 80 watts and a 'reasonable' beam aerial ... pillock !!!.

So ... Malc & Terry ... er' ba' gum lads, the bitch is back.

(The title is from the infamous FRANKENSTEIN movie)

I'd like to reprint two prominent Amsat members comments - (snipped
from the latest Amsat News Service Bulletin).

They are referring to contacts with the ISS, which must be classed as a LEO satellite.

Please note the power levels referred to.

Is it really necessary to give the impression that such power levels are desirable?.

From N1JEZ.
>Power here was set at approximately 5 kW EIRP. I did drop
>10 dB and still got in as the ISS passed overhead. My full
>power setup here includes 80 watts in the shack to a 55 element
>1269 MHz Directive Systems loop yagi. My trans-mission line is
>75' of 7/8" hardline."

>Alan, WA4SCA said, "I have about 2500 watts EIRP on L-Band,
>minus some attenuation from trees, and could only bring it up
>above 45 degrees the limiting factor seemed to be having ...
Let's face it - EVERYBODY !!! has this kind of power available - (don't they?) - and it's
common knowledge that such equipment can be picked up almost free of charge at any of the
the local fleamarkets in Bangladesh, Mozambique or Ulan bator.

Of course !!! Amsat is promoting the hobby for 'everybody' ... the "rich man's club"
direction is merely a myth ... together with the pomposity.

... and before you start bombarding me with inflamatory remarks please be aware that my
comments are made with tongue firmly in cheek ... but I ask you, even the *LOWER* powered
station ... 2400 watts EIRP ?? ... and no,
this *wasn't* the gentleman who needed an 80w BRICK and 10 element beam to work AO-7.

The potential newcomer could be forgiven for thinking that you 'NEED' a kilowatt class EIRP
station to work the ISS.

Who'll give me 45, 45, 35, 35 25? ... Do we have any bids *UNDER* 2 kW ??. (EIRP)

Hello John and a Happy new Year

You can NOT compare the rig (Kenwood TRX) in the ISS with a satellite. Mode-L is very deaf, so you need to send with kilowatts. There was a note and calculations in the SAREX forum. Sorry, I can't find the mail.

I think, we all are "big boys", so we know if we can send with QRO, QRP or QRPp. Or not ? ;-)

Topic: 2220 Message: 2222

Happy New Year Thomas,
Don't worry, I was just blowing off a bit of steam
for the New Year ... it never harms to illustrate the - "use the required power to maintain effective communications".

As I mentioned previously, hardly anyone regulates their power as a satellite approaches TCA - (for the newcomer, TCA = "Time of Closest Approach" ... when the satellite is a lot nearer to you and usually about 3 - 6 dB stronger).

I've recently found out just how deaf the ISS rig is on 23cm - hardly worth
the effort when you need a kilowatt to have a QSO with the ISS. I'd guess
that effectively cuts out about 98% of the Amsat members (??) ... which was the main gist of my mail anyway.

I had good contacts again this morning on AO-7 with 2 watts to the ground floor indoor Arrow ... (EIRP about 15 watts) ... two stations answering my CQ so I *am* being heard with a QRP signal. The gentlemen concerned using both receiving aerials *AND* ears (!).

In February I move to the other side of the Island so I'll be able to set up the 'outside' aerials again - weather permitting - (this is the snowstorm season).

I'll probably go back to my 'ENORMOUS' 10 watts again.

73 John.

As per ISS crew activity for January 07 2009 a Montreal school contact is schedule but nothing appears on the ARISS contact schedule?
Is there two list running one official and another private one? This school contact is schedule at 0440 AM!!! pretty early for the students
and not exactly in the media prime time?

09:40-09:50 CDR, FE-1 HAM radio session with students from Montreal, Canada

2224. Bordering on the ridiculous !!.

Yahoo group: eu-amsat
Date: 2009-01-08 09:17:08 UTC
From: John Hackett
Topic: 2224 Message: 2224

Hello Folks,
Avid readers of this reflector ... (he means the EU-Amsat reflector, folks) ... will have noted my fairly recent aerial restriction impose' ... and consequent 'migration' to QRPp (2w) to an Arrow aerial in a basement flat to work AO-7.

This morning I was "otherwise detained" - yes, there was a woman involved, and as the Americans say - go figure! ... but I digress ...

I missed the first part of the pass and by the time I'd switched the FT-790 on - AO-7 had gone AWOL (for the 'civilians' - that's absent without leave, or, as GM1SXX would have so eloquently phrased it, "awa'"... or, in Russian ... "sodded off" - behind one of the mountains.

However ... having gone to all that trouble of switching the rig on I decided to crank out a CQ anyway on my steam powered QRPp station.

Naturally, with the aforementioned equipment and current AO-7 location I did *NOT* expect a reply ... but sure enough, halfway through my call, there was Jean-Maria (F2IL) replying ... (good 'moaning' Jean)

I was gobsmacked.

I've operated a *LOT* of QRP this last 40 odd years but I've never experienced so much with so little ... William of Occam indeed !!.

Tis' vail to use more to acheave that which can be done with less.
Willy of Occam. 13th century AD.

Whether this time I was using my usual knife-edge propagation or just plain or garden variety sheer luck will remain debatable ... I can only refer to the title of this epistle.

The 'exploits' may be reviewed at your convenience at ...

<http://www.observations.biz/Observations_from_Norway/index.htm>

and ...

<http://www.observations.biz>

Notabena 1.

If you don't like the layout, blame GM1SXX.

Notabena 2.

I'm the good looking one, he's the one with short, fat, hairy legs.

Here it is on 3 lines... but read the rest about 10 pages on the cubes! what i like is "an international group of amateur radio operators"
they don't mention wich one NA or DL? Its one small step for the AMSAT'S but giant leap for THE HAM SATELLITE OP'S KIND.

"The workshop was also supported by AMSAT, an international group of amateur radio operators that is participating in ESEO by providing
some of the satellite communication functions. AMSAT will enable the ESEO flight operations to access
the Global Educational Network for Satellite Operations (GENSO) and the worldwide amateur radio network."

Hi Luc,
BRILLIANT !!!! ... I'm calculating potential doppler rates
"as we speak".

Incidentally, the place in the videop is just down the road from me.

Perhaps people will realise now why I have a very short window and
sometimes 'disappear' ... (these little 'hills' they call MOUNTAINS).

Interesting for knife-edge propagation at UHF though.

AO-7.

Hi John

Could be some mobile operation in the kind of this one can be a solution as it seems they
are in some Norway mountains?

AMSAT-NA I think. AMSAT-DL has no interest to support Cubesats.
AMSAT-DL is concentrating for Phase-3E and -5A.

Your question wonders me, this is well known and "usus".

Thanks for the link, I will read the article on page 9.

From: Bratu Florian Gabriel
Topic: 2233 Message: 2233

I have observed on AO51 that the industrial noise is lower on 145.880 uplink and very high on 145.920
Maby is possible to reduce completely the noise if the ground team connect again the 67Hz CTCSS.
For example the SO 50 have zero noise.
What's your opinion?

Hello Florian

I agree with you. I had a personal dispute with Drew Glasbrenner about this topic. He will not switch on the CTCSS-tone because he want to investigate the intruders. This works eventually in NA but not in Europe and Asia. Its completely impossible to investigate the long range telephones and other stuff in Russia, China and elsewhere. Its thinking to the border but not over it (I hope you understand what I mean). On the ISS the V/U repeater is also activated for a 67 Hz tone.

Thanks for your posting, it confirms also my observations.

Andy, to program the memory channels is one thing. The better way is
to use a good satellite tracking program with CAT. Look at
http://www.dk1tb.de/indexeng.htm for SatPC32.

Hi

I will be QRV on FO-29 on the January 26 0143Z pass most of northern Europe and Scandinavia will be in the same footprint. I know it will
be early in the night but just in case some can be awake at that time it will be a good DX pass (new grids?).

See you there.

P.S. Many LEO'S are empty at those hours.

Hi,

FYI, Carlos Eavis, G0AKI (RSGB) and I did a Satellite Beginners presentation at the Leicester Radio Show last year.

The slide show can be found at:

http://www.slideshare.net/g4dpz/amateur-satelllite-beginners-presentation

2250. AO-7 is OFF....

Yahoo group: eu-amsat
Date: 2009-02-08 15:37:50 UTC
From: SV1BSX
Topic: 2250 Message: 2250

Hello all,

today the Grand Old Lady (aka AO-7) seems to be "OFF" !

I really hope to listen the lovely "Lady" in the next pass and I keep my fingers crossed for that,
however this "OFF" seems to be unusual & unexpected for this period.

Just keep your "ears" open and try to monitor both Modes (A & B) for the next passes over Europe (~ 16:30 & 18:20 UTC).

Your reports are welcome (here -or- into Emily's Online LOG).

73, Mak SV1BSX

From: SV1BSX
Topic: 2250 Message: 2252

Hi Mike & Group,

I was monitoring the whole pass over my QTH between 16:22 - 16:42 Z,
however Mode-A & B neither were "OFF".

BTW I also observed that, the usual transponder "noise" of AO-7 was easily
readable around
145.938 - 145.942 MHz, when the satellite was close to my TCA.

To be honest, I am not very sure if this noise was from the satellite -or-
it was a local
man-made noise close to me. The bad news is that, I didn't listen any
longer the noise after
the LOS of AO-7. I would like to hear somebody else to confirm that, as I
said before,
I am not very sure about the noise's source.

In any case, If the noise was from the satellite, it might be the
downlink-section is ON, however the "Uplink" is probably "deaf".

Sudden....

73, Mak SV1BSX

Hello Mak and group

I monitored 29.450 MHz the last 2 orbits but have nothing heard. During the next orbits I will monitor 29.450 and 145.972 MHz.

Also http://oscar.dcarr.org/ has red entries. Hopefully AO-7 is not passed.

2257. Re:Was HEO naivete

Yahoo group: eu-amsat
Date: 2009-02-10 10:23:54 UTC
From: Luc Leblanc
Topic: 2257 Message: 2257

Just for the record in those trouble days.

Since the end of AO-40 this feedup wave came and go at moderate chop beyond the reef. I was surfing also time to time but on Feb the 10 UTC
on FO-29 0110 pass and i was alone with KC4KMY. In the eastern NA common foot print ALL the northern, eastern and south European continent
was in view and in bonus the north and east coast of Africa. Near LOS the northern part of South America up to the amazon river was in
view.

Signal where Q5 but only two surfers... I know they where sleeping on the old continent but if by any chance someone is passing by his
shack overnight heading to his toilet just check through the blinds for a couple of minutes. There is a lot of DX opportunities on FO-29
actually.

In the AO-40 era most of the DX pass where overnight here and it was near the only one way to have super DX QSO's

BTW the first step towards the next HEO is to have one international AMSAT regrouping all the expertise and funds. That's what someone
named Obama tells the crowds regroup and get together!

The public works snow blower is just passing on my street widening it (one pass on each side and two other on an intersection) and shooting
all his stuff directly on my front house terrain making a superb sound and light show... at 0500AM :(too bad no satellite in view!

Hello Luc,

what is you locator ? I am in JN58xx (sout-east Germany) and I often try to work the western low elevation passes on AO7 and FO29.
But the only NA Station I worked in all modes on AO7 and via FO29 is K3SZH.
No NA station is answering my (ofen lonesome) CQ-calls and I do not hear any NA stations tuning over the passband (even if it is afternoon/evening) in NA.

In fact my location allows only a few minutes to work NA (not as easy like from UK or spain), but lets make a sked !

Hi John

I am in FN36KA and there is two pass on Feb 11 the first one a 1.4deg maximum elevation at 0020Z and the second one at 0107 up to 12 deg we
will be both in the same path but i don't count too much on the first one at 1.4deg.

We will have the same pass as the one i refer in my first post on February the 12 at 0107Z and she's better that this one today. Even Italy
will be in the same footprint up to the south of Italy. A great great DX pass.

I call CQ around 145.960mhz +- doppler and i will have automatic doppler compensation. If you don't have automatic doppler it will be
better to manually adjust for doppler on both sides?

Just hope we can drive some pile ups...!

I will be there on both days and if the first pass is unsuccesfull on the 11 i will try on the second one.

2260. ARISS contact planned today with school in ALEXANDROUPOLIS, GREECE

Yahoo group: eu-amsat
Date: 2009-02-10 23:15:28 UTC
From: SV-AmSat
Topic: 2260 Message: 2260

The International Space Station Expedition 18 ARISS school contact has been planned with participants at 1st and 2nd Lyceums of Alexandroupolis, Greece on Wednesday 11 February 2009. The event is scheduled to begin at approximately 07:43 UTC.

The contact will be a direct between stations OR4ISS and SX7ISS. The contact should be audible over most of Europe and the Near-East. Interested parties are invited to listen in on the 145.800 MHz downlink. The participants are expected to conduct the conversation in English.

Alexandroupolis is the capital of Evros (population over 60.000) and has a leading role in the geographical area of Eastern Macedonia and Thrace, being the connecting gate between the countries of the European Union, the Mediterranean area, Asia and the countries around the Black sea. Therefore, the town has become one of the major junctions of the European Union.

The ARISS school contact will take place in 1st High School Alexandroupolis, Evros, Greece. About 70-80 students from 1st and 2nd High School will participate to this event. Students are aged 15-16 years.

Orestiada High School will also participate (about 25 students). All the students have astronomy lessons in 2nd Class.

2261. FWD: US ASTRONAUT SANDRA MAGNUS TALKS WITH SCHOOLS IN GREECE

Yahoo group: eu-amsat
Date: 2009-02-11 10:04:15 UTC
From: SV-AmSat
Topic: 2261 Message: 2261

February 11, 2009

US ASTRONAUT SANDRA MAGNUS TALKS WITH SCHOOLS IN GREECE

Wednesday, 11 February 2009 at 07:43 UTC, i.e. 09:43 local time, 1st High School Alexandroupolis, Evros, Greece established a direct contact with US astronaut Sandra Magnus, KE5FYE on board the International Space Station. The Amateur Radio school station operated the contact with callsign SX7ISS.

Sandra answered all 20 questions which had been prepared by the students.

Audience in the meeting room counted over 200 students, while 700 more students listened to the space talk in the garden. Four schools participated to the event.

Special guests were the representative of Greek Minister of Telecommunications and the Director of Education of Evros.

3 TV stations, 2 radio stations and several newspapers granted the event national coverage.

Congratulations to the schools in Alexandroupolis and to the amateur radio team, comprising Manos Darkadakis SV1IW and Cliff Sacalis, SV1JG, respectively President and Vice President RAAG - Radio Amateur Association of Greece.

Photos and an mp3 audio file will be attached to this News Bulletin, archived at:
http://www.ariss-eu.org/archive.htm

Hello Al,
I see the Amsat-NA website this month kicks off with ...

JAPAN LAUNCHES AMATEUR RADIO SATELLITES On JANUARY 23.

One could be forgiven for thinking Japan had actually launched some amateur radio satellites ... which of course they havn't.

What they have done is launch a 'bunch' of university satellites using AMATEUR RADIO frequencies ... and not even cubesats, to boot.

In my book (and that of the late Commander John Brannegan) there IS a difference between an amateur radio satellite and a university satellite.

Anyone interested in the prior warning of 1994 re: the 'thieving' of amateur radio frequencies is invited to read...

<http://www.observations.biz/Satgen/sgen268.txt>

Nowadays these assets (frequencies) are being 'sold off' to any and every university wanting to copy what university 'x' did last year. hardly any of these so called AMATEUR SATELLITES are serving any useful purpose to radio amateurs.

There are a select few radio amateurs capturing telemetry data serving the UNIVERSITIES but little or no advantage is given to the average radio amateur so IMHO it's a misnomer calling them AMATEUR RADIO SATELLITES.

RS 10, 12, 13 and AO-7 are/were amateur radio satellites, IMHO, the current crop of rice boxes are misnamed by Amsat as amateur radio satellites.

I would call them UNIVERSITY satellites using amateur radio frequencies.

2263. Re: closer to ZERO

Yahoo group: eu-amsat
Date: 2009-02-11 15:03:29 UTC
From: SV1BSX
Topic: 2263 Message: 2263

I SUBSCRIBE ! 100 %.

BTW before 2-3 days, the AO-7 was "OFF" for about 24 hours, and I was thinking the future of Amateur Satellite Service *Without* the "Old Lady":

closer to ZERO ~ !

Definitely is very sad as the next better Linear LEO-Satellite (FO-29) is very old as well and the problems of it are
widely known (it was "OFF" for about 18 months due to battery-problem).
The third in class linear-LEO, the VO-52, is good enough but too close to Earth surface (600 Km) and thus it does
not offer any good opportunity for DX - QSOs.

Having in mind that the launch-day of the next HEO is completely unkown and out of any dead-line, I can't really
imagine why nowadays a new-Ham must be involved with the Amateur Satellites.

It's obvious that, nobody newcomer should be spent money in order to be able to listen a Satellite into
Amateur Satellite zones - without the ability to use it (see "University-Sat".)

Therefore, this kind of Satellites are definitely "OUT" of the Ham-spirit and thus they are not
Amateur Satellites.

73, Mak SV1BSX

From: st2nh
Topic: 2262 Message: 2264

Hi John

Just ask the AMSAT why they gave some of university sat an OSCAR numbers?

Take a look to AMSAT web page you well see all the new sat listed there! http://www.amsat.org/amsat-new/satellites/status.php

'Thieving'!!! IMHO I don't think so John!
Every university has a website explain what a ham radio is.
IMHO I think this populate our hobby in high educational community

IMHO this more useful to radio amateur in our modern time to spread our hobby .and valuable to upgrade our hobby for the future

Do you think the new generation well be interesting to RST report? or they will be looking for more sophisticate technical aspect of our satellite communication?

In near future the Amateur operator well need a satellite to upload the last DVD Movie to his friend and download the last version of the new PC operating system for his laptop via amateur satellites!

IMHO change wll come soon .

Hi Nader,
You are of course, entitled to your opinion, which I don't share.

I believe that many of the University birds carry little or nothing of interest to the amateur satellite community, most being downlink-only data collection platforms for experiments of dubious merit to radio amateurs. I have absolutely nothing against University birds, but I do strongly believe they should not be masquerading as amateur radio satellites, or operating on amateur radio allocations ..... unless they do something of genuine value to the average radio amateur, such as Delfi-C3 which at least carries a transponder.

Thieving... IMHO I do think so!

Kind Regards,
Al.
GM1SXX
P.S. Don't expect a prompt reply from John. he's ill with Influenza.

Hello Nader,
Everyone is entitled to his/her opinion ... which is PRECISELY !!! why Mak, Al amd I started this reflector ... so that an opinion that *doesn't* follow the "official party line" may be expressed without fear of repercussion,
'flaming' and being hung out to dry by people with a different opinion.

Actually, I believe Mak, being Greek, may know something about democracy.

The Thirteen Commandments of the Amateur Radio Satellite
Builder
1) Thou shalt not criticise the BOD in any way, shape or form.

2) Thou shall adhere rigidly to the party line at all times.

3) Original thoughts are taboo

4) Original ideas are taboo.

5) FM satellites are the dogs bollox, even better than PSK (but see commandments 9&12)

6) Contributors to the cause should gladly take what is dished out to them and never question anything.

7) Criticism of ANY sort is punishable by excommunication, severe flaming or worse.

8) The BOD's decisions are always right for the membership and must never be questioned.

9) PSK is the best satellite mode.... bar none.... but see commandment 5!

10)Scientific methods are used to select projects, payloads and as a means of stifling original thought.

11) Nr 10 is correct unless someone with influence and money has a 'better' idea. Then #10 goes out the window and is replaced by #11

12) CUBESATs really *ARE* 'Amateur Radio satellites"... honest.. scouts honour! Well at least if you join three together they can just about fit the bill.
13) All commandments may be altered at any time by a closed session of the BOD.

Hi John

Just ask the AMSAT why they gave some of university sat an OSCAR

numbers?

Take a look to AMSAT web page you well see all the new sat listed

there! http://www.amsat.org/amsat-new/satellites/status.php

'Thieving'!!! IMHO I don't think so John!

Every university has a website explain what a ham radio is.

IMHO I think this populate our hobby in high educational community

IMHO this more useful to radio amateur in our modern time to spread

our hobby .and valuable to upgrade our hobby for the future

Do you think the new generation well be interesting to RST report?

or they will be looking for more sophisticate technical aspect of our

satellite communication?

In near future the Amateur operator well need a satellite to upload

the last DVD Movie to his friend and download the last version of the

new PC operating system for his laptop via amateur satellites!

IMHO change wll come soon .

It's interesting to note that my comments re: Amsat's headline of Japanese Amateur satellites, while being CC'd to GM1SXX, EU-Amsat and the Amsat-bb appeared in GM1SXX's mailbox, at EU-Amsat but *NOT* on the Amsat-bb.

It 'could' have been construed as *NOT* following the official party line so I'm hardly surprised. Of course, it *could* have been a computer glitch ... honest, scout's honour ... it could !!! have been, right? ... right!.

Good job I didn't attach the the '13 commandments' otherwise I'd have probably got the verbal equivalent of a MINUTEMAN lobbed in my general direction.

It's certainly not the first satellite/satellite collision. Cerise was
damaged in 1996 when a collision ripped off part of its gravity
gradient boom.
http://en.wikipedia.org/wiki/Cerise_(satellite)

As the number of objects in LEO increases (most of it now junk), the
likelihood of collisions will also increase.

There is also the problem of paint flakes shed from old rocket bodies
and hundreds of thousands of solidified droplets of Sodium/Potassium
coolant at around 900Kms, leaked from from old Russian RORSAT birds,
that Molniya type birds have to fly through.

A head-on hit from a single paint flake can do serious damage to a
spacecraft, and there are a lot of flakes out there. A droplet of
solidified metal is even more of a threat.

I can well remember cosmonaut Helen Sharman showing us the damage that
a single paint flake did to a space station's 'bedroom' window.
The paint was sampled and found to have been shed from a Soyuz rocket
body.

Even the space shuttle suffers regular damage to it's windows and
tiles from small debris particles in (low) LEO.

It doesn't require a collision with a big object to do serious damage.
Something the size of a grain of rice or a garden pea can do very
substantial damage to a satellite.

Regards,
Al.

2271. Satellites in collision

Yahoo group: eu-amsat
Date: 2009-02-13 06:20:53 UTC
From: Luc Leblanc
Topic: 2271 Message: 2271

Simon says

U.S. STRATCOM routinely tracks about 18,000 objects in space, including satellites and debris, that are 3.9 inches across or larger.
Tracking priority and "conjunction analysis" - identifying which objects may pose a threat to manned spacecraft - is the first priority.

What when wrong here? Does someone was sleeping on the switch?

NO FAULT IN SPACE
Which satellite was at fault, "they ran into each other. Nothing has the right of way up there. We don't have an air traffic controller in
space. There is no universal way of knowing what's coming in your direction."

A steel umbrella is probably the best defense?

For those who want to make their own PC game just put theses TLE in your TLE folder and enjoy the show. try a quarter of second automatic
play speed. On Orbitron it's nice but could be much better on other interface?

Hi Al,

Perhaps I misunderstand you but you appear to be saying that any device that is Transmit Only is not Amateur Radio.

There are hundreds of Terrestrial Transmit Only Beacons that operate in the Amateur 50/144/430/1240 MHz allocations.

What do you consider the difference is between a Terrestrial beacon operating on 432 MHz and a satellite beacon operating on 437 MHz ?

73 Trevor M5AKA

2274. A clarification.

Yahoo group: eu-amsat
Date: 2009-02-15 22:26:12 UTC
From: John Hackett
Topic: 2262 Message: 2274

A CLARIFICATION.

GM1SXX's actual words were ... " I believe many of the university birds carry little or nothing of interest to the amateur satellite community, most being downlink only".

This of course meant that a *LOT* of amateur radio operators (me included) think of an 'amateur' satellite as a satellite carrying a TRANSPONDER for communication - as opposed to a BEACON which, without a transponder, IMHO serves very little useful purpose to the majority of space interested radio amateurs.

Keyword: Majority.

As I mentioned in my original post, The UNIVERSITY students may gain advantages from a beacon's data, I believe a *LOT* of radio amateurs don't.

I also believe that's how the majority of radio amateurs distinguish whether a particular satellite is an AMATEUR satellite or a UNIVERSITY satellite ... whether it carries a transponder or not ... which is why I made the statement that I thought it was wrong that Amsat called the recent Japanese satellites for AMATEUR satellites when IMHO a more appropriate name would have been UNIVERSITY satellite.

There is no hard and fast *RULE* ... it was merely a SUGGESTION on my part to distinguish between something that is useful to *MOST* space interested radio amateurs and (again in my opinion) a select few ... namely those that copy the beacon only satellites and submit that data to the university students.

I believe these amateurs are in the minority.

This is where GM1SXX's - " I believe many of the university birds carry little or nothing of interest to the amateur satellite community - comes in.

It's also my personal opinion and I *AM* entitled to it.

IMPORTANT COMMENT.

The GPS constellation of satellites also carry beacons ... but I think we'd all agree that they shouldn't carry the designation 'AMATEUR' satellite ... in other words, just because a sattelite carries a beacon does *NOT* necessarily make it an amateur satellite ... however, if it carries an amateur built TRANSPONDER like that built by William PE1RAH - I think we'd all agree that it SHOULD be called an AMATEUR satellite.

... if I walks like a duck, looks like a duck and smells like a duck ...it very likely 'QUACK's like a duck too.

Point to ponder.

Commander John Brannegan G4IHJ first made an observation similar to the above - in 1994 ... so the 'designation' is 'NOT* new.

Hi Trevor

This is also an other and fresh view of sight in this discussion ;-)

Apropos: UO-9 was the first University Satellite ever. And how many OSCARS's was built in Universities before the CubeSats came ? The description "Research Satellite" is better I think.

Thanks John,
You saved me some time and effort by clarifying the point I was trying to make. These satellites may serve universities well,in churning out degree students, but they don't do much, if anything, of interest for most licensed radio amateurs. If all that's required is a beacon, why not place all of them on a common beacon frequency. That at least could provide a new facet of interest within the hobby ... even for me. Beacon spotting. Even I'd be interested in that :-)

The truth is rather different though. These birds merely hijack amateur radio satellite allocations to return data free of charge.

Why don't the Universities concerned campaign for a small license-free slot for these birds instead? The Universities probably have more 'clout' than radio amateurs. They have the advantage of structure and funding... so why not? What could they possibly have to lose?

73 Al.

Hello Al

I basically agree with you. I make QSO's rather than listening to
beep..beep (I'm not a CW'ist). There are listeners who download decoder
software from internet and take part of the university experiments.
This is an additional part of our satellite hobby. Please accept this
and ignore it if you are not interested. Or give the students your
helping hand. If we always inveigh against the "Student-Sats", then
nothing will change.

Thank You for your understanding.

Ah, there is a satellite beacon band - on 437.nnn MHz.

A fact remain they are launching satellite at a rate no AMSAT'S never experienced. Should the AMSAT'S redefined their mission and goals?

I think it will be more and more obvious they will have to start to build closed relationship with them but is the generation gap will
permit it?

From: John Hackett
Topic: 2280 Message: 2280

Al, Luc,
The pipe clips are an old Royal Signals 'practice' trick.

Another one (to practice 'feel') was to put the key on the floor and manipulate it via a broom handle ... woe betide !!! you if you transmitted a false character.

It invariably !!! resulted in a rap across the knuckles with a steel ruler and having to repeat the letter F ... dit, dit, dah, dit = DID IT HURT YOU? ... (think about it).

Remember, in real life tactical situations we had the key strapped to a thigh and were more often than not ploughing through thick gorse bushes while transmitting.

Great fun.

I note that certain elements are apparently still not 100% happy about people being allowed to have differing opinions as to what constitutes an 'amateur' satellite.

TomAto tomato ... I for one am not losing any sleep over it.

It's interesting to note that my comments re: Amsat's headline of Japanese Amateur satellites, while being CC'd to GM1SXX, EU-Amsat and the Amsat-bb appeared in GM1SXX's mailbox, at EU-Amsat but *NOT* on the Amsat-bb.

It 'could' have been construed as *NOT* following the official party line so I'm hardly surprised. Of course, it *could* have been a computer glitch ... honest, scout's honour ... it could !!! have been, right? ... right!.

Good job I didn't attach the the '13 commandments' otherwise I'd have probably got the verbal equivalent of a MINUTEMAN lobbed in my general direction.

73 John. <la2qaa@...>

The generation gap is not always related to age but sometimes to the mind and spirit lets say the real amateur soul. I just mean some sort of communicating.

We can just listen the "Dobacaracol" singing something strange:

http://www.youtube.com/watch?v=4MQQtzZhL0I&feature=related

"were more often than not ploughing through thick gorse bushes while transmitting." I think i found your bushes... I'm just searching the key.

http://www.youtube.com/watch?v=hr3h3JWqr6s&feature=related

Could be she's in the water?

http://www.youtube.com/watch?v=RBfgMPw03Fk&feature=related

Or in the mean time trying to make the dancing girl swinging the reverse way...Can you do it?

Does not some of the AMSAT'S are also dancing in the reverse way but it take's only the power of the brain to have thing's change

See the girl attached!

P.S. Each of us can make this girl change her dance... clockwise or counter-clockwise! How a clock is supposed to be wise and not some BOD
members?

Hi Thomas,

Yes clearly the University CubeSats are used for Self-Training and Technical Investigations but are these not the same aims as the Amateur Radio and Amateur Satellite services ?

What has greatly encouraged me is the number of of University students who have got Amateur Radio licences as a result of their involvement in a CubeSat project.

Recently in London an event was held for those interested in developing CubeSats. The interest from across the United Kingdom was so high that the event was oversubscribed.

This interest is something that Radio Amateurs can turn to their advantage.

Perhaps Amateurs should become more involved with their local universities both in promoting Amateur Radio and in assisting the students with their CubeSat projects (perhaps suggesting and helping the students with the development of a linear transponder would be a good idea).

I feel we need to do everything possible to encourage university students to get involved with Amateur Radio.

Now please correct me if I am wrong but I believe that only one member of AMSAT-DL team actively involved in building future satellites is under 40 years old.

I would hazard a guess that world-wide most of those involved in building what some would consider as true "Amateur Satellites" are close to, or over, retirement age. I think we need to encourage a new generation to get involved with the development of future Amateur Satellites.

Fully agreed Dear Trevor. There are some OM's out there who can not accept this CubeSats. OK, there are a few Cubes with a "gray mission" which has no relation to amateur radio. But to put all CubeSats generally in the same hole is shortsighted. I can repeat my words again and again. It needs much more support from amateurs to this students. Only then we have a feedback in new licensed colleages and eventually a linear transponder in a Cube. But this is a technical question, DO-64 was shut off. It also needs an open mind from this students for amateur radio. It needs both sides for a handshake.

To AMSAT-DL: Its possible that one or two in the team are less than 40 years old. But the age is nonrelevant. I'm 50 but I have the mind of a ... Ok :-) It has tradition in AMSAT-DL, that he has a few hard core members who plan and build satellites. But now the financing of a launch is the big problem and not the age of the members. See www.amsat-dl.org. We need a very rich member, a russian oligarch or a saudian oil prince. Let's hope.

Great news Trevor thanks

Here is a new satellite from a educational institution from India
a project of Anna University at Chennai and the satellite is ANUSAT

http://www.spacemart.com/reports/ISRO_To_Launch_A_Breakthrough_Satell
ite_999.html

ANUSAT mission's main objective is to involve universities in
building micro satellites as a means to promote and encourage intra-
disciplinary technologies with ISRO's help.

ANUSAT carries a digital store and forward payload for AMATEUR
communication.

2288. Global Education Network For Satellite Operation (GENSO)

Yahoo group: eu-amsat
Date: 2009-02-18 22:22:53 UTC
From: st2nh
Topic: 2288 Message: 2288

HI

GENSO is a project initiated under the auspices of the International Space Education Board (ISEB). This board consists of the Education Departments of the Canadian Space Agency (CSA), CNES (Centre National d'Etudes Spatiales) , the European Space Agency (ESA), the Japan Aerospace Exploration Agency (JAXA) and the National Aeronatics and Space Administration (NASA).

The project is managed by the Education Projects Division of ESA.

GENSO aims to increase the return from educational space missions by forming a worldwide network of ground stations and spacecraft which can interact via a software standard. This will fundamentally change the way that these missions are managed, dramatically increasing the level of access to orbital educational spacecraft.

Educational space missions are often hampered by the relatively small communication windows offered by their typically low orbits and local ground stations.

GENSO is a software standard which allows each ground station on the network to communicate with non-local spacecraft and share data with the spacecraft controllers via the internet. This will allow for a near global coverage in communication for every educational satellite launched, greatly increasing the return from educational space missions and the opportunities for sending commands to the spacecraft.

The design and implementation work is being carried out by a distributed set of student and radio amateur teams worldwide and with over 80 educational spacecraft currently planned there is a very large demand for such a project.

AN OLD CALL FROM GENSO TO AMATEUR

Today a brand new call, in which the ESA Education Office lists opportunities for students and radio amateurs to join GENSO, was opened and released to the public through the ESA Education Office Website .

The call is open to students and amateur radio enthusiasts from any country, although preference will be given to students from the member countries of the ISEB Agencies, in particular if their participation is supported by their universities.

Deadline is 12 December 2008!

> 73,
> Dee
> NB2F
> NJ AMSAT Co-ordinator
>
A part of the problem is AO-51 that you can compare to a senior citizen touring charter bus who stopped at a restaurant without any
reservation. You are queued in line and suddenly the crowd debarks pushing and rushing up to a point that you have to ask them to stopped
pushing as it was their last lunch before they died.

The restaurant lobby is AO-51 not permitting a lot of traffic and the satellite users are the senior citizen running to have the first
seated place available. Even if the tour guide is yelling like a mad cow to the crowd asking them to stop pushing it has a very little
effect as the pack is still compact and still pushing.

But what happen if our satellite users are also senior folks? double trouble but they are the exception and probably the same very one who
are stuck on each and every pass. Don't throw too much rock at them as you will also be senior soon too...

Bottom line FO-29 is still empty on many evening pass!!! Why the bus driver and the tour guide does not split the bus load in 2 or 3
restaurants? exactly what we experience with our very limited fleet.

P.S.This is a fiction, any resemblance with a real person would be only pure hazzard effect.:)

2291. The whole story.

Yahoo group: eu-amsat
Date: 2009-02-22 19:57:08 UTC
From: John Hackett
Topic: 2291 Message: 2291

Full marks to the Amsat News Service for informing us of the new linear transponder from Amsat India ... but I do wish they'd have published the full story and mentioned that there is no launch planned or envisaged for this 'satellite' ... in fact, Amsat India is soliciting 'opinions' as to what kind of orbit and mode this satellite ought to be placed in.

In other words ... I wish they'd have checked the full story before printing things like 'new linear transponder' - (ie - giving the impression that a linear transponder launch was imminent).

This satellite should *NOT* be confused with the store and forward cubesat that *IS* to be launched by ISRO.

If the above information is incorrect in any way I would appreciate being corrected.

IMHO 'wishful thinking' is *NOT* going to get us a linear satellite launched ... and before the negative comments start, there *ARE* quite a few people who would like to see another LINEAR satellite launched ... and no !!!, I don't have all the answers as to how it is to be acheaved ... so please don't shoot the messenger.

For those interested, Amsat India is referring to the 'new' satellite as Hamsat II

Details at <http://www.amsatindia.org/Newsletter/> (February)

Hi John

The store and forward sat is not a cube sat !
it is a UNIVERSITY Micro-satellite `ANUSAT'

here is the specifcations

Micro satellite Main Frame Specifications
1. Size : 600mm x 600mm x 600mm cuboid
2. Mass : < 50 Kgs
3. Solar Array : Body mounted Silicon solar cells generating 33 Watts
of
Average power
4. Battery : Lithium-Ion, (4 x 4) 16 cell battery ; 6 AH capacity
5. Bus Voltage : 13V to 16V
6. Telecommand : VHF (PCM/FSK/AM); 100 bits/sec, 149.2 MHz.
7. Telemetry : VHF(PCM/FSK/AM); 256 bits/sec., 137.4 MHz,
8. Stablization : Spin stablized with spin axis orientation towards
orbit normal
9. Spin rate : 4+ 0.5 r.p.m. (automatic SRC)
10.Spin Axis
Orientation : + 30 (Autonomous SAOC)
11.Sun Sensor : +75 degree range with 0.5 degree resolution
for sun aspect angle
12.Magnetometer : + 45,000 gamma with 500 gamma resolution
13. Torquers : 4.5 Am2 each (Two Nos.)

Hi John, Nader & all,

I agree with Nader, we talking about different Sats. The next launch is the ANUSAT, which carrying a digital payload.

The Linear Transponder that is mentioned on Amsat-India Newsletter, it's already made by the Amsat-India for the future HamSat-II, however the rest Satellite is just on "papers".
Amsat-India encourage the WW satellite-operators to send opinions about the desired payload of the future HamSat-II to the following Email:

info@...

Personally, I would like the new HamSat-II to be much HIGHER than Hamsat-I, without a perfect eccentricity (see FO-20 & 29). Thus, with a perigee of about 700 Km and an apogee around 1350 Km, it should be good enough and probably the HamSat-II could be a perfect successor of FO-29, which is very old.
Of course, if the orbit is much higher is greatly appreciated (even if I know that is not easy !).

The Satellites with orbits around 650 Km are welcome and, we are always greatfull to Amsat-India about these "gifts", however these orbits have serious limitations like small-passes, very sharp Doppler and the most important: no good opportunities for DX-QSOs.

Definitely we need something in a higher orbit (like AO-7 or FO-20) in order to keep our hobby interesting.

IMHO, anything lower than FO-29 is very... bore to involve with that.

73, Mak SV1BSX

Hello John

Yes, this impression can arise. Thru the generosity from ISRO we have VO-52. They built the satellite and spent it to AMSAT-India. AMSAT-India had only to build the transponder like William Leijenaar, PE1RAH. See http://www.qsl.net/pe1rah/HAMSAT-info.htm. William has also built a new lineartransponder: http://www.qsl.net/pe1rah/LE002.htm.

And there was an Italian OM who also built a lineartransponder for HAMSAT, but this one was not accepted. I forgot his name and call.

I write OSCAR-News in German for 22 years now. I'm confident that "they" have never checked the full story. What I miss is a actual status about AMSAT-Eagle.

>
> This satellite should *NOT* be confused with the store and forward

Do you mean the microsat Anusat ? I did a little recherche and asked in the VUSAT group. I get an answer from Rahul, VU3WJM: "I was there at Anna University conducting a workshop. Unfortunately could not verify the ststus of these Micro sat." Hmmm... I'm sceptic what they mean with "amateur communication". What kind of amateur ? Again students ?

I'm not a fan of the AMSAT-NA writers, but a blind chicken can also find a corn. (Its a German adage)

After the crash of AO-40 or earlier AO-10 we all have a great "black hole".
To fill it with LEO's is not satisfiable by all. So it's not wondering,
that such a wishful thinking exists. I understand you and don't shoot
you. :-)

>
> For those interested, Amsat India is referring to the 'new' satellite
> as Hamsat II

Does ISRO spend a new satellite structure and launch ? Wishful thinking ?

Hi John

The store and forward sat is not a cube sat !

it is a UNIVERSITY Micro-satellite `ANUSAT'

here is the specifcations

Micro satellite Main Frame Specifications

1. Size : 600mm x 600mm x 600mm cuboid

2. Mass : < 50 Kgs

3. Solar Array : Body mounted Silicon solar cells generating 33 Watts

of

Average power

4. Battery : Lithium-Ion, (4 x 4) 16 cell battery ; 6 AH capacity

5. Bus Voltage : 13V to 16V

6. Telecommand : VHF (PCM/FSK/AM); 100 bits/sec, 149.2 MHz.

7. Telemetry : VHF(PCM/FSK/AM); 256 bits/sec., 137.4 MHz,

8. Stablization : Spin stablized with spin axis orientation towards

orbit normal

9. Spin rate : 4+ 0.5 r.p.m. (automatic SRC)

10.Spin Axis

Orientation : + 30 (Autonomous SAOC)

11.Sun Sensor : +75 degree range with 0.5 degree resolution

for sun aspect angle

12.Magnetometer : + 45,000 gamma with 500 gamma resolution

13. Torquers : 4.5 Am2 each (Two Nos.)

Thus, with a perigee of about 700 Km and an apogee around 1350 Km, it should be good enough and probably the HamSat-II could be a perfect successor of FO-29, which is very old.
> Of course, if the orbit is much higher is greatly appreciated (even if I know that is not easy !).

I agree that higher orbits are more generally useful, but have you considered that 1350*700 (or any orbit that intersects to the 900Kms region) would take the craft through the increasingly trash-filled 'graveyard orbit' (around 900 Kms) twice per revolution. See message 2269.
Also you have to think of the radiation dose it would incur. There are many factors to consider, not least the basic issue of what altitude, eccentricity etc, you can find a launch to.
We rarely get much choice (if any) in the matter, except with Molniya's that carry their own propulsion system.

2297. Anusat with HAM payload ?

Yahoo group: eu-amsat
Date: 2009-02-23 13:57:02 UTC
From: Thomas Frey
Topic: 2297 Message: 2297

Hello All

I have read carefully the Anusat.pdf document which I downloaded here:
http://beswaminathan.googlepages.com/Anusat.pdf

On page 4 at bottom I/you can read:
"The satellite carries aboard a store and forward payload operating in Amature [Amateur] (digital) mode with VHF uplink and UHF down link operating in amature [amateur] frequency bands. It provides digital communication facilities between a number of universities/colleges and amature [amateur] satellite radio operators."

As you can also see on the same page this "store and forward payload" with amateur radio frequencies is the Primary Payload ! Curious for a scientific University satellite. Its also curious that no informations are available about this payload. No frequencies (VHF up/UHF down), no modulation (AFSK, FSK, baud rate ?) and no communication protocol (AX.25 ?). Only the telecommand and telemetry frequencies from the second payload (!) are known.

I disbelieve that this is an amateur radio satellite with a Packet Radio BBS. I think its like a well known "CubeSat" mission in a microsat frame.

More and better infos are very appreciated !

2298. K5D QSOs

Yahoo group: eu-amsat
Date: 2009-02-24 13:35:42 UTC
From: SV1BSX
Topic: 2298 Message: 2298

Hi all

for those that are interested about DX-Sat & DXCC entities, Drew KO4MA managed the first satellite QSO with
Desesheo DX-pedition (K5D) ! Well done Drew !

See at the bottom of the following page:

http://69.89.25.185/~trexsoft/t-rexsoftware.com/desecheo/feb20.htm

Of course, that is not possible for the most Europeans, as the distance of K5D and i.e. Athens is
approx. 8850 Km (FK68GJ <> KM17UW).
However, the West Europe is possible to manage a few QSOs with Desesheo via AO-7. For example, the JN01
Grid is much closer, just about ..... 6950 Km from Desesheo and I believe that it's absolutely manageable
distance for a similar QSO with the appropriate antennas.

It would be nice to hear the K5D in a few QSOs with Europeans through the "Old Lady".

Just keep in mind !

2299. GMSK FAQ

Yahoo group: eu-amsat
Date: 2009-02-24 20:59:53 UTC
From: st2nh
Topic: 2299 Message: 2299

Subject: [amsat-bb] GMSK: Time for a stupid question :-)
From: "Henk, PA3GUO"
Date: Sun, 22 Feb 2009 22:44:41 +0100 (CET)

While trying to work Cute-II, I started to think about GMSK ...
(I have a PK96 external TNC hooked-up)

My beautifull TS2000 has FM/AM/USB/LSB/CW modes.

For GMSK, do I use FM or FSK ?

Please only a gentle smile, I realize I do look silly asking this :-)
Henk

Subject: [amsat-bb] Re: GMSK: Time for a stupid question :-)
From: "Colin Hurst"
Date: Mon, 23 Feb 2009 17:24:54 +1030

Henk,
AO-51 runs 9600 GMSK.
Most people receive AO-51's GMSK digital on PSK Decoders.
The early UoSats and their subsequent derivatives ran PSK.
Understandably there is a slight degradation in performance copying
GMSK on PSK decoders.

Connecting an oscilloscope to your TNC will identify the difference
between GMSK and PSK.
Put the TNC in test mode to verify the PSK waveform.
Use AO-51 to compare one against the other.

The TNC3S has a GMSK selector, but I cannot remember whether it was
for RX, TX or both.
Its some time since I had the covers of or perused the manual.

So your PK6 should work "OK" on GMSK.
73,
Colin VK5HI.

Subject: [amsat-bb] Re: GMSK: Time for a stupid question :-)
From: "Howard Long"
Date: Mon, 23 Feb 2009 10:00:40 -0000

Hi Henk

FM. FSK is for (relatively) narrow band RTTY type modes that
traditionally you'd have your radio set to USB or LSB.
Your TNC modem will expect the signal to have gone through a
limiter/discriminator, so you need the TS-2000's FM mode.

GMSK is FSK, but with two particular features.

Firstly the modulation index for GMSK is always 0.5, with state
changes occurring at zero crossings and phase continuity maintained.
Secondly, after the scrambler, the 1's and 0's go through a Gaussian
filter and that's what modulates the FM carrier: the -3dB point of
that Gaussian filter is determined by the BT.

The primary benefit of GMSK is that it reduces adjacent channel
interference at the expense of intersymbol interference.
I doubt that's the reason it was chosen for this mission though,
much more klikely it was because you can buy chips off the shelf
to do GMSK.

There's quite a good intro to GMSK here,
http://sss-mag.com/pdf/gmsk_tut.pdf

So yes, you should be able to demodulate GMSK with a standard
9k6 G3RUH modem although theoretically it might not be optimal.

73, Howard G6LVB

I'm confused about Colins statements! UO-14, UO-22 and the PacSats with 9600 bps Packet Radio downlink ran definitly FSK (Frequency Shift Keying) and not PSK (Phase Shift Keying). I decoded them all thru GO-32 with G3RUH's modem and a PK-232.

Does AO-51 really transmits in GMSK ?? I thought also in FSK.

Hi Aldert,

and nice to "hear" you again after a long time !

Well, probably you are right, just now I was looking on BB and they have
there several messages about that.
Just the SO-50 mentioned... too sad.

About your epilogue, the "Old Lady" is excellent Satellite - you know that
as well .
I believe that you don't need something like "extreme" Antennas. A mere
example is our friend Mika, OH8MBN.

You could not believe it how simple antennas he using (see the attach. foto
!!).....
and he has managed dozens of overseas QSOs with .... VE & USA !

So, the location is very important - not the antennas. Have you a "clear
horizon" (@ 0 degrees Elevation) to this direction? Try it. If no, just
forget it my friend.

As they used to say:
"You can not reach the stone across the pond - if you are blind".

Yes Nader, what do you mean ?

Above I meant definitive, not definitly. I know, Colin is a honor
Gentleman and if I remember me right, he was a control operator
of AO-10, AO-13 and AO-40. So I'm surprised about his statements.

2308. AO-7 DX-list NEW-UPDATE

Yahoo group: eu-amsat
Date: 2009-03-02 23:27:22 UTC
From: SV1BSX
Topic: 2308 Message: 2308

Hello all,

the new updated "AO-7 DX-List" is already uploaded and we have 2 NEW Records for the 1st & 2nd place of the
"Longest Distance QSO" via AO-7!!!

The 1st "New WW Record" has been achieved by W4FDU and LU2DPW on CW-Mode. The distance between the 2
stations (EL89TP <> GF05GI) is 7537 Km, about 99 Km more than previous record ! Well done !

The 2nd place has been also changed with a second New-Record of 7524 Km by AA4FL and LU2DPW (....LU2DPW "strikes" once again !).

The previous Record (7438 Km) by Joe, K3SZH and Fabio, PY4AJ, it's now in the 3rd place of DX-List.

Congratulations to all operators ! Great competition !

For more details visit the new URL of page:

http://www.qsl.net/sv1bsx/oscardx/ao7-dx.html

....and a few "Tips":

Please keep in mind, I have set a new "Limit" for each operator in order to send me NO more than 2 QSOs maximum.
So, please send me just your "first two" best DX contacts - no more- in order to keep the List as short as possible (and interesting !).
The participation does not have meaning if includes a lot of contacts for each one operator, there is not any sense to send me somebody 5-10 QSOs and the most of these with a distance lower than 6500 Km.

We looking for the "Longest distance DX-QSOs" via AO-7 - NOT for a.... Long-long boring List.

Actually, after a few months I will keep into the DX-List ONLY the confirmed QSOs . Thus, in my new page only these QSOs (Highlighted with Yellow-color) have "counting" - including the foto of QSL-card.

The NON CONFIRMED QSOs are already without any number (counting) in the 1st column and they will be erased the next year from the list, if the concerned operators don't send me the relative QSL-cards. That it was a request by several operators which have already Confirmed QSOs and I agree with that, it's absolutely fair. As they used to say:

"The Final Courtesy of DX-QSO is a QSL Card" !

BTW I am fully surprised about the complete absence of MODE-A in the DX-List ! Nobody? Why that?

After a few weeks the Old-girl will enter in new eclipse-period, so we will lose the 24/7 "switching" between Mode-A & B.

Finally, pse check your personal entries (...if you have) in the DX-List and let me know for any possible error -particularly- in the "Distance (Km)" and "Locator" columns. The most participators have different programs, they don't use the "TinyLocator" for the distance-calculation and thus, I need to re-calculate several entries in order to make an accurate DX-List.
That is not easy if I have 10-15 new entries per update, so ...."don't shoot the pianist" !

Just let me know about the fault and I will correct it ASAP.

Thanks in advance

73 de Mak, SV1BSX

Hello Nader

There is a little error in the address, correct is:
http://www.st2nh.com/AO-7RTTYBEACONST2NH.JPG

Can you give us more infos also here please ? Its really a nice surprise from this very old satellite. I listend on 435.100 MHz USB +- Doppler last sunday but I've nothing heard. Is this QRG OK ? And during which mode runs the RTTY beacon, A or B ?

Thanks and 73

Hi Thomas,

the BCN is "ON" when the Old-lady is active on Mode-A, but as you know nothing is
stable enough on this satellite! Quite often the AO-7 On-Line Log has entries about the
BCN, so it might be helpful.

Today the BCN was very strong, I heard it after the AOS on 435.110 and I lost it
on about 435.050. And yes, I think you need USB on RX and REVERSE
on RTTY - software (- or the opposite in both).

However, for me it was not easy to decode it, my RX has 50 Hz step and thus is not
easy to center the RTTY-waterfall, the same time with Doppler.

Good luck to you !

Hi Nader,
This is very interesting for me. The CMOS telemetry channel switching hardware is obviously still working, incrementing the channels but the data being transmitted are meaningless. The last value of each data frame should be 650 or 651 and is the reference voltage for the single channel A/D converter.

In the past, John, LA2QAA and I downloaded and decoded data from the bird *with* the correct A/D ref value of 650 or 651 so I wonder if the hardware on board actually still *is* functional but the bus voltage is currently insufficient to support proper and meaningful TLM system data generation.

I've lost touch with AO7 so I don't have any idea of how much illumination it is seeing, but if the illumination improves further still, don't be too surprised if you see a frame ending in 650 or 651 (the optimum values).

Remember that AO7 has been in Orbit for a *very* long time, leading to serious degradation of the glass cover-slides on the solar arrays. Even at a time of excellent illumination, they probably produce very little power.

AO7's telemetry system is very simple. It presents the output from each of the telemetry channels in turn to a single channel A/D and is then sent in a 'round-robin' type sequence. The last channel value should always be 50 or 51 (651 or 651) and is the reference voltage to the A/D.

Something else that John LA2QAA discovered by careful measurement is that even in full illumination, the mode-switching timer is not 100% consistent as you'd expect from an Xtal controlled oscillator. Turns out that in fact an R/C oscillator was used... hence the drift, despite the fact that the drawings show a rather different xtal based design. My information source on this one? No less than 'the King' .....Jan King, that is. Further study of the mode-switching timer in full sunlight by someone other than LA2QAA & GM1SXX would be most interesting :-)

I'm sure AO7 has few more surprises yet, and no doubt the AMSAT 'party line' on the matter will differ from mine.

Hello Folks,
Further to GM1SXX Al's comments (see below) I can also mention
that we did extensive testing over a considerable period of time using software
GM1SXX wrote specifically for that task.

The information gleaned re: the timer, which in fact is *NOT* as printed in the
1974 Amsat newsletter, can be found in the EU-Amsat archives - as well as on
the 'Observations' website by 'The Twisted Pair'.

<http://www.observations.biz>

I have reams of e-mails from Jan King, the AO-7 spacecraft project manager, re:
the RTTY and CODESTORE system.

The 650 and 651 parameters are from The King (Jan King) himself.

I have the command codes to control the satellite ... *BUT* ... the general
concensus of opinion was then - - and even more so now !!! ... that "messing"
with the electronics *COULD* do more damage than good ... so we decided to
leave the old girl alone to 'AGE WITH GRACE' rather than die a death because
LA2QAA couldn't keep his sticky little finger off the button.

Hopefully, the tongue-in-cheek description will be appreciated for it's content.

It would be too much of a chance to risk 'losing' AO-7 altogether - just to 'try'
the Codestore.

For those with an interest, you can find some stuff at...
http://www.observations.biz/AO7_Stuff/

Just various notes emails etc batted between John, myself and Jan,
sorted into some sort of semblence of disorder :-)

AO7 does indeed continue to amaze.

Hello All

From Pat, G3IOR, I found an example description of the CW telemetry from the 2m beacon:

Hi Hi
100 176 164 178
280 262 200 254
375 358 331 354
453 454 461 459
541 501 552 529
600 600 601 651
Hi Hi

This differs from that, what Nader received, as you can see. I think, there are 2 different formats for the CW and the RTTY beacon ?

Mit freundlichen Gr?ssen, Regards, 73

Hi Thomas,

I know you are interested to know if the RTTY and CW TLM downlinks are the same. Unfortunately I can't answer that question. We didn't copy any RTTY.

The above frame is very typical of a CW frame as copied during LA2QAA and my own active study of the AO7 data. Since the data are framed correctly with the correct row numbers (generated by CMOS clock/data multiplexer) and the last value is 'sensible'... 49,50 or 51 are deemed acceptable, then the frame above shows that at least the CMOS timing clock + mux and A/D converter performance is nominal, with adequate voltage to drive the clock, counter,CMOS switches & A/D.

The MUX consists of a counter that toggles cmos analogue switches, to present the data inputs in turn to the single-channel A/D.

When the bus voltage drops too low for correct operation, you get random data sent and garbage A/D reference data. Bad data generally has scrambled row ID data and invariably doesn't end with 49-51.

The telemetry system seems quite robust. By that I mean that the beacon could be FM'ing quite badly while the data mux etc worked pretty well with enough voltage present for proper operation of the MUX clock and A/D converter etc.

AO7 is a tough old bird and I never cease to be impressed by the surprises she can spring on us. I'm sure a lot of good detective work still remains to be done. I think AO7 has a few surprises to spring on us yet.

Quite a bit of information can be gleaned about the state of the onboard systems based on what the telemetry tells us, especially at times of full illumination. Without a know period of full illumination, LA2QAA would never have managed to 'catch out' Jan King & Karl over the RC timer issue. That took some serious dedicated study on John's part. Apparently it was too decided that it was too much hassle and cost to order a special xtal for this timer :-)

I personally rate it as a superb piece of detective work.

73 Al.

2319. AO-7 "Sudoku"

Yahoo group: eu-amsat
Date: 2009-03-03 17:05:50 UTC
From: Thomas Frey
Topic: 2319 Message: 2319

Hello Al and group

In the meantime I read the following article on SARC:
http://www.southgatearc.org/news/march2009/ao7_continues_to_surprise.htm

I see now, that the RTTY-frame is unformatted.

And now compare the following 2 frames:

```
-10000-11768-12338-13710-QPEAQTOEU-16421-17395-10000-19131
-20484-21912-22898-23864-24549-25073-26887-27880-20000-29630
-30000-31000-32000-33479-34000-35234-36260-37288-30000-39256
-40501-41913-4910-43900-44594-45072-46920-47914-40000-49638
-50000-51765-52331-53019-540P-55-56000-57000-50000-59854
-00555-00047-00555-00047-00555-00047-00555-00047-00555-00;(7
-APVMOT-00047-00555-00047-00555-00047-00555-00047-00555-00047
-00365-11869-02810-03884-04640-0506APYITR207898-0010-09528N
[- end of block ? -]
-10000-11745-12307-13712-14603-15937-16432217381(,17011-19055
-20484-21807-22900-23896-24612-25056-26797-27881-20000-2966MA
```

```
100 176 164 178
280 262 200 254
375 358 331 354
453 454 461 459
541 501 552 529
600 600 601 651
```

With a little bit of logic thinking and the info from the article
you can make this "Sudoku". ;-) Or reformat the RTTY-frame.

HI

http://www.amsat.org/amsat/archive/amsat-bb/10day/msg70432.html

Jim, N8OQ worte on the above link :-

Greetings,

I only recorded 1-minute of the RTTY from last evenings pass but was
able to
decode channel 11 through 16 from it to augment David's (VK5DG)
decodes. Here
is what I was able to decode using reverse,45,85 parameters. I also
used the
1974 AMSAT J. final parameters and equations conversions. Great job
to David
for finding the 70-cm beacon on and decoding so much!

```
Ch Value Ok? Description Converted Value
-------------------------------------------------------
11 734 Y Battery volts 13.74v
12 326 N Half battery volts 3.41v
13 695 Y Regulated volts 23.63v
14 602 Y 10v Reg volts 9.38v
15 937 Y 9v reg volts 9.37v
16 422 Y Ch reg1 volts 6.53v
-------------------------------------------------------
```

Jim, N8OQ

What was the (equations conversions)
Jim used with AO-7 RTTY data ?????

Hello Nader

I don't know Jim's software. But when the RTTY-frame is reformatted
like the CW-frame, you can use a wide software collection. See
http://www.amsat.org/amsat-new/satellites/sat_summary/ao7.php
This is the official AO-7 homepage.

Nader,
I believe you were interested in the AO-7 RTTY equations.

See the attachment.

Anyone requiring the CW eqations or any other technical information
about the old girl ... *SHOUT* !!!!

As Mak knows, I dedicated several years of my life to that chunk of
aluminium & plastic ... (which I thoroughly enjoyed ... though my
2 x divorced wives didn't) ... he he he.

Useless Information Dept:

Ny curtesy of LA2QAA & GM1SXX ... (aka The Twisted Pair).

For the benefit of potential newcomers.

AO-7, launched in 1974 was the testbed for the later generation
PACSATS and the forthcoming (2009) store and forward cubesat.

AO-7 had a simple store and forward system called CODESTORE, a simple
CW store and forward system (predating the Russian RS 'Robots'). Designed
by the Australians - (betcha' didn't know that) - the system was first flown
on Oscar 6

It also had an RTTY systen designed by the same team.

Somebody (can't recall who) asked for beacon frequencies.

The AM modulated telemetry beacon is on 29.50 Mhz - 200mW 35 years ago
(see GM1SXX's earlier comments re: solar panel degradation) 145.98 (200mW)
and 435.10 FSK (350mW)

(now the station that mentioned it sounded 'wierd' in mode-A perhaps can
understand why ... try AM).

73 John. LA2QAA & Al GM1SXX.

Hi Thomas.

It has to be remembered that most of the AO7 hardware is built from simple first-generation unbuffered CMOS chips and as such, has no dedicated serial interface on board. Instead the telemetry system uses a master clock which is used to sample the analogue data from the sensors by simple multiplexing via CMOS analogue switches that feed their signals in turn to the A/D converter and thence to shift registeres for 'formatting' for transmission. The clock/counter circuitry supplies the channel 'ROW' count while the A/D samples the data and 'tags' that to the 'row' counts. Ergo you get the format that you do. In it's time' it was pretty clever stuff..... a telemetry and control system and not a hint of a microprocessor anywhere :-)

As you have worked out, the RTTY is a SODOKU version of the same data... for the same reason. The system on board is rather simple! No UARTS, USARTS or anything that ends in ARTS!
It's so old that the CMOS is of the old unbuffered sort.

Remember, when AO7 was built, we were still using computers the size of a large washing-machine with mag-core memory. At least I was!
Embedded IHU's were quite a long way off in the future!

You can see most of this hardware at the link I posted earlier.

It's also worthy of note that much of the transponder circuitry is built on Turret Tags over a ground plane. Think *big* slotted Vero pinss pushed into an isolated 'land' on an unetched PCB, and you'll get the general idea. It was obviously pretty successful :-)

The command system is also rather clever.... for it's time.

73 de Al.
GM1SXX

2331. AO-7 TLM fans please note.

Anyone wishing to try the AO-7 RTTY equations I posted earlier today can start with the data below.

I would (respectfully, but strongly) suggest interested parties read the posts from GM1SXX before doing so. I assure you that particular information 'IS* correct - unlike certain statements in the Amsat Newsletter of September 1974.

The degradation of the solar panels can only be estimated 35 years hence ... The electronics onboard *ARE* as GM1SXX notes.

Even the illustrious Commodore 64 !!!! (The breadbox) wasnt conceived in those days so the CODESTORE and RTTY system *WAS* pretty 'spiffy' for it's time.

(Australia gave us more than Crocodile Dundee) ... namely OSCAR-6 as the 'first' digital satellite).

Please note ... that the 1974 newsletter was a *PROPOSED* - (quote) - TECHNICAL OPERATIONS PLAN AND EXPERIMENTER'S GUIDE - (unquote).

Last minute changes *WERE* made before launch.

The above information was given to me personally by the AO-7 Project Manager Jan King W3GEY (in 1974) VK3GEY (but now in France).

NB.

Anyone wondering what part Australia (and Britain) played in Space can 'stick' the word WOOMERA into Google and ... 'read all about it'.

The reason the British shipped their rockets to Australia for launch ought to be fairly obvious and yes, it was all classified in the 60's.

Further keywords are BLACK KNIGHT

(So that's !!!! why Branson called his craft White Knight.....GM1SXX)

Hello John

Very interesting! I saw in Emilys Log at Saturday or Sunday, that
an OM heard this beacon also. I can't found the entry.

Hello Thomas,
Yes, I think I saw that entry on the Amsat-bb too.

I made specific mention of the '200mW, 35 years ago' because GM1SXX
and myself tried to bring to people's attention several years ago that we
can only speculate as to the effectiveness (or lack of) of the solar panels
with 35 years of accumulated spacedust 'onboard'.

I do remember Terry G1WPR - (yesssss, I know !!!! you and K3AZH are
peeping... 'How'ya doing Joe?") ... mentioning we ought to send up a
Cosmonought to 'give 'em a wipe with a wet cloth'.

Being serious for a moment ... GM1SXX actually runs part of his station on
solar power and noticed a couple of years ago some power degradation -
but a wipe with a damp cloth resored the effectivity.

Like I mentioned - we can only speculate on the effect of 35 years of
accumulated spacedust ... this needs to be taken into account when
attempting to speculate on power or effectiveness of the old plodder.

I think more and more people are becoming aware of what a resource
we have in AO-7 ... you never know, even Amsat might realise it one
of these days ... but I'm not holding my breath.

(You do realise you just 'proved' you're a wishful thinker.....GM1SXX)

Forgive the 'banter' Thomas, it's SATIRICALLY meant.

Seriously, I believe AO-7 ought to have been used *FAR* more than it
has to emphisise the role of amateur radio in space ... a launch *MIGHT*
have been a bit more forthcoming if the commercial BIG BOYS were made
aware of what certain radio amateurs are capable of.

THUD !!!!

(falls off soapbox)

2335. RE: [eu-amsat] AO-7 TLM fans please note.

Yahoo group: eu-amsat
Date: 2009-03-04 12:29:28 UTC
From: John Hackett
Topic: 2331 Message: 2335

Hello Mak,
My personal opinion is that the RTTY data is about as genuine
as an American $11 note.

That is precisely the reason GM1SXX and myself have been 'waffling' about
the electronics and the inadequate power (dusty solar panels) to run the
RTTY encoders.

I wish !!! somebody could prove us wrong ... but unfortunately, nobody is
dropping in on AO-7 this week.

A *LOT* of CW data was captured over a rather long periodof time by myself
so I *KNOW* 85% of it was incorrect - (according to the equations) - I
ASSUME the RTTY system to operate under the same parameters BUT I HAVE
NOT PERSONALLY CHECKED THIS ... which is exactly why I added that collected
data stream together with the equations earlier this morning.

As you know, GM1SXX and myself have done our bit on and for AO-7 - so
somebody else can have a crack at the whip now ... perhaps write a new
data capture program to prove/disprove our theories ??.

2336. AO7 Codestore

Yahoo group: eu-amsat
Date: 2009-03-04 12:41:54 UTC
From: Allan Copland
Topic: 2336 Message: 2336

Hi Folks,

This is how they did business in the days before embedded CPU's.
It works pretty well.

http://www.observations.biz/AO7_album/Temp-0047-1.jpg

I'm pretty certain that this is the codestore module.
These chips are the unbuffered forerunners of the modern CD40XXB series CMOS IC's, but in military spec ceramic packaging. In their time, I'm sure they'd have been pretty expensive IC's. You can see the construction, testing and launch of AO7 at..
http://www.observations.biz/AO7_album/
If you click on the thumbnails, they will open a bigger image.

Interesting that although the RF stuff (transponders)is built in large part using turret tags, the remainder (mostly logic) is on conventional PCB's. You can also see some photos of that troublesome battery which unknown to AMSAT was already 'old' when it was donated to them. It had already been through some extensive cycling.
Just as well that it ended up bucking the trend for Ni-Cd's and going open-circuit... or at least high resistance.

2337. Nader's Satellite Sodoku data

Yahoo group: eu-amsat
Date: 2009-03-04 14:47:24 UTC
From: Allan Copland
Topic: 2337 Message: 2337

Hi Folks

Nader posted a link to the following 'Satellite Sodoku' data.

```
-10000-11768-12338-13710-QPEAQTOEU-16421-17395-10000-19131
-20484-21912-22898-23864-24549-25073-26887-27880-20000-29630
-30000-31000-32000-33479-34000-35234-36260-37288-30000-39256

-20484-21807-22900-23896-24612-25056-26797-27881-20000-2966MA
```

To me although this might be fun, but looks like garbled rubbish. I say this because although *some* of the info is framed properly with rows 1-5 looking not too bad and row 6 missing altogether!

I'd respectfully suggest two 'rules' you should apply to your Sodoku data.

1)If you don't copy all the rows then you should discard that frame.
and ... much more importantly,
2) if the last value in a frame is not 649, 650 or 651, the data are unreliable.

The reason for this is simple. The last value in each frame should always end in 6 plus 49, 50 or 51 because that represents an acceptable analogue to digital converter reference voltage, absolutely *essential* for the sending of acceptable telemetry data. Without enough power to provide the A/D with it's proper reference voltage, all data is meaningless.

Satellite Sodoku... I have to say, what a grand game :-)

Should you copy any frames that *do* end in 651, I'd be most interested to hear from you, as would John, LA2QAA.

The information in Nader's transcript *does* prove that the clock, counters and shift register etc are all working correctly, otherwise you would not get the line numbers being sent... and in correct sequence. You can infer a lot from even bad data :-)

UoSAT2 used a similar system for it's telemetry downlink and it too seems to have died, or be be dying, in a similar type of way, sending framed telemetry block but devoid of data. CMOS is a hardy technology for space use. UoSAT2 is a somewhat more recent bird than AO7 and probably used modern buffered CMOS.

There's a lot of fun and eduction to be had from studying 'old birds'... HIHI!

From: st2nh
Topic: 2341 Message: 2341

Hi all

Still AO-7 satellite in mode-D pumps a very strong RTTY data.

The downlink frequency is 435.105 + - doppler usb.
Parameters 45 BAUD, 85 SHIFT.

AO-7 Teletype Equations Conversions table found on AMSAT NEWSLETTER 1974on page 9 there is a table for conversion the AO_7 teletype telemetery data .

Here is a link to this old copy

http://www.ka9q.net/AMSAT-Newsletter-1974.pdf

Mike DK3WN is working now on a new software to decode the RTTY.
This wll make the fun more easy to newbies and old timer.
tnx Mike.

Today I was able to decode the following data.
Orbit # 56,962
16:44 - 17:07 UTC

-01909-02588-03894-04870-05038-06904-07535-00000-09913-10000-11770-

2342. AO-7 RTTY Telemetry Decoder

Yahoo group: eu-amsat
Date: 2009-03-04 21:05:56 UTC
From: st2nh
Topic: 2342 Message: 2342

HI,

Mike DK3WN just released AO-7 RTTY Telemetry Decoder BETA version
GREAT WORK Mike .

http://www.dk3wn.info/software.shtml

Zip version
http://www.dk3wn.info/files/ao7_rtty.zip

73 de Nader , st2nh
www.st2nh.com

2343. Information request.

Yahoo group: eu-amsat
Date: 2009-03-04 21:10:46 UTC
From: John Hackett
Topic: 2343 Message: 2343

I havn't operated 13cm since AO-13 threw in the towel.

Is the V/S mode of AO-51 popular in Europe ??.

What say Thomas ??.

I'd appreciate feedback from anyone in Europe using this mode.

(I'm looking for something to rejuvenate a flagging interest in
satellite operating).

73 John. <la2qaa@amsat.org>

Hi
to see the AO-7 RTTY Telemetry Decoder in action
used Alan's reseived RTTY data.
Here is a link to the file

http://www.st2nh.com/ao-7rtty.rar

snapshot

Topic: 2343 Message: 2345

Hi John,

well, I have worked just a few times the Mode-V/S on AO-51, twice by puting again my AO-40 / 2.4GHZ gear in my
Satellite-mast and once .... from my back-yard (...like an Arrow !) !

I remember that the downlink was excellent, really BOOMing - even if I used just my Patch-feeder, without the Dish
that I used for AO-40. But, the Doppler was quite sharp! However, it was not difficult to work the Sat by
using 5KHz step and manual-Doppler correction (+ - 50 KHz !).
Another point was the heavy Fading - even if I used Circular polarization.

The traffic, I remember that was quite low - depend on the day (and hour), but even quite low the Satellite
-under this situation- it's a 100% *real* Amateur Satellite, without the ZOO which happens usually on
Mode-J. Probably the majority of S-Band operators are from the AO-40's generation and they know much better
the.... Satellite-etiquette.

Personally I keep nowadays my 2.4 D/Converter "out of duty", in order to avoid the WX-corrosion and any possible
damage, as the V/S Mode on AO-51 is not very often "ON". Thus, I would like to protect my D/Converter
for the next ....HEO ! (...yes, I know, I Am a ... dreamer... !).

But definitely I suggest you to try it that. Always the 2.4 GHz Band is an excellent experience,
reminding to us the good old days of AO-40 (...and for some "old-men", the AO-13).

Excellent !! Mak,
Precisely the information I was looking for, confirmation
that the satellite *DOES* in fact operate in mode-S over Europe.

As I mentioned, I've almost lost interest these last years due to the lack
of linear birds and the 'zoo' tactics on the FM ones ... typical !!! old man
'whinging' but the standard of operating really is getting worse and worse
... however, once a satellite operator always a satellite operator.

I have a few bits of homebrew S-band stuff lying around and noticed that
next week AO-51 is in V/S for a week and I was wondering whether I should
bother trying it, I needed confirmation that it does actually transmit on 13cm
over Europe.

I have fond memories of 'chasing' DOVE on 2.4G with manual tuning ... keeps
you busy ... he he he ... this was quite a while before they came up with CAT
tuning. Just using a down converter to an FT-290R ... (which is still in service)
Patch antennas were still - 'In the army' - in those days. I used them as a professional
but they were quite unknown in the 'amateur' world at the time.

Thanks Mak, just what I needed, have a good day mate,

73 John. <la2qaa@...>

2347. The AO-7 saga continues ...

Yahoo group: eu-amsat
Date: 2009-03-05 07:55:24 UTC
From: John Hackett
Topic: 2347 Message: 2347

A couple of AO-7 TLM spreadsheets are still on the old AMSAT-NA website
but the original RTTY decoding software has been removed ...

(for obvious reasons).

There isn't much point in people copying invalid data.

If one checks back in the archives, one will get a fairly good impression of
what went on with the command stations in the 2002 - 2005 timeframe

Lessons learned from when the AO-7 telemetery data was valid.

(Remember, these days it isn't).

When the 435.1 beacon is ON the MODE- B transponder is totally deaf.

When the MODE B transponder is ON, the MODE - A transponder is totally deaf.

GM1SXX has recently explained why.

73 John. <la2qaa@amsat.org>

2348. ... and continues ... (AO-7)

Yahoo group: eu-amsat
Date: 2009-03-05 09:11:46 UTC
From: John Hackett
Topic: 2348 Message: 2348

For those dedicated souls wishing to follow the events of AO-7 from
1974 to today.

1) Go to the 'new' Amsat-NA website.
2) Scroll to the bottom of the page.
3) Click on *Original Amsat website*
4) Scroll down until you come to the 'Google' search bar
5) Type in 'AO-7'

You now have access to lterally hundreds !!! of post and links dating
back to 1974. The persistent among you will probably figure out who Larry
Keyser was ... (The battery man) ... and who Dick Danials is ... though the
observant among ye' will note that he took the pictures that GM1SXX posted
yesterday. Dick was also on the design team so he *DOES* !!! know what
he's talking about.

Karl Meinzer's 'filter' is a story in itself. Those who really want to know can
contact me off list and I'll tell you a funny story.

Be aware that some of the posts on the bb are 'opinions' ... that is to say,
not necessarily correct ... but reading 10 or more on the same subject will
usually get you the gist of things.

Remember !!! ...

"Send reinforcements, we're going to advance"

When QSP'd by more than three amateurs usually becomes ...

"Send three and fourpence, we're going to a dance".

(So-called 'facts' very often change with the re-telling).

HI

Monitoring a vital signs for a patient who has been in coma for more than 20 years at the ICU is so valid and so interesting to all the medical practitioner or medical doctor around the word .for sure many vital sign well not be stable but as long as the patient is alive you need to check those vital sign and keep your eyes on any simple changes.

It is so interesting to be part of history and it is fun and education

No harm to monitoring old Mum (unstable) vital signs.
She needs TLC (tender love care)

Nader,
I take your point, and agree to a certain extent (healthwise) but if
someone wants to copy invalid data, who am I to argue.

I think if you read GM1SXX's mails again you'd see why it's extreemly
unlikely AO-7 could recover for a second time but hey !!!!, we'd love to be
proved wrong.

The previous open circuiting, current panel degradation and consequent
'return' to semi operations was 'logical' at the time - but a new return to
an operational status regarding RTTY is IMHO highly unlikely ... for the reasons
stated previously ... but again, I love !!! it if we were wrong.

GM1SXX and myself spent enough time monitoring and analysing the sub
systems to be 'reasonably' sure ... yes, I said *reasonably* sure that we
wouldn't get a second reprieve ... unless a miracle happened ... (but that's
a debate for a different bulletin board).

For the above reason I decided *NOT* !!!! to send any commands to the satellite
after 2006. It was deemed too risky (as I explained yesterday).

It was better left alone because a batteryless semi operational satellite is better than no
satellite at all.

I was not sure how many amateurs would agree with that but took the chance that most of
them would.

For those following this thread ... to put it in layman's language ... sending a
command to AO-7 with the current state of the electronics 'could' switch the
satellite off altogether ... BECAUSE THE MODE-B AND MODE-A PARAMETERS
ARE INTERLEAVED ... in other words ... commanding mode-A would switch off
mode-B and vice - versa.

If you do read happen to read GM1SXX's posts again and digest them,

I'm sure you'll understand why we came to the conclusion we did.

Like I said ... I see no harm in monitoring a patient that is deemed dead.

One could of course monitor invalid data to practice 'monitoring' ... but other
than that, I personally, fail to see the point ... which is *NOT* to say they
shouldn't do it if they wish.

By all means decode the telemetry and if you find results I didn't, I'll be the
first !!!! man to stand up and say *I WAS WRONG* ... and I'm pretty sure
GM1SXX will be the second.

As for AO-7 mode-A versus mode-B, that's the way it was designed ...

DON'T SHOOT THE MESSENGER !!!.

Well I had plannned to 'keep mum' about this matter (of AO7 being in a deep coma).... and while satellite Sodoku might be lots of fun, the 'patient' is 'brain dead', so no amount of wishful thinking, work writing software, or effort in decoding is really justified without seeing that last vital sign.... the one that reads 649, 650 or 651.

AO7 is brain ded, but of course *should* she emit a few 649,650 or 651's then I'd be very interested indeed. Until then' she is best considered to be in a 'Persistent Vegetative State'.

If you don't know why those particular numeric values are important, go do some proper research. As John pointed out, there is a wealth of archived material awaiting your perusal.

Unlike a human patient with a terminal illness, A07 could in theory at least,come back from the dead. It depends to a huge extent on the supply bus voltage.

I do honestly believe that many of AO7's systems are capable of proper functioning given enough voltage and therein lies the problem.... t'aint enough.

Take a look at UoSAT2 and her parallel with AO7. Same general scenario... she was sending 'perfectly good' telemetry frames but with no data... or garbage data .. contained in them. UoSAT2 *did* have a CPU, but the telemetry system was *not* CPU controllled. Instead it was hardwired from CMOS, pretty much like AO7 but a more modern variant.

For those old enough to remember, the Russian bird RS-1 played a similar trick, for similar reasons!

Kind Regards,
Al.

Hello,

I have not worked AO51 in V/S mode yet, but my old equipment is still here so I have the possiblity to work. But - like mentined here before - this mode is very very seldom in use (unfortunately).
Concerning the disciplin end behavior you can see a big "improvement" even in mode L/U (which is activated also not very often :-( )

73 and hope to meet you on the LEOs

P.s. I still look for more transatlantic contacts from JN58xx....
Who is QRV to try via AO7 or FO-29 (perhaps to "crack" the current ODX ;-)))

2357. AO-27 is back again...

Yahoo group: eu-amsat
Date: 2009-03-07 12:19:07 UTC
From: SV1BSX
Topic: 2357 Message: 2357

Hello all

just before 5 mins I had a QSO with OZ1MY on AO-27 - after a long-long time - where the Satellite
was dead.
The AO-27 sounds again just fine, with Booming signal.

Bad news: the "usual" terrible jamming from some Arabian countries, sometimes
makes difficult the access.

Have a nice weekend.

73, Mak SV1BSX

Hello all

In this TLM-block I can see a few 650-values. Is this block valid
now ? What does the experts say ?

2359. AO-7 RTTY TLM Beacon comment.

Yahoo group: eu-amsat
Date: 2009-03-07 14:39:13 UTC
From: John Hackett
Topic: 2356 Message: 2359

Hello Thomas,
According to W3EGYm Jan King, AO-7's chief designer and
project manager - in an e-mail to myself and GM1SXX a few years ago ...

(Quote)

"If the CW blocks end in either 649, 650 0r 651, the data can be assumed to
be valid and correct"

(End of quote).

Whether that also applies to the RTTY data Thomas, I really don't know though
I assume it does.

GM1SXX has already explained how/why - in detail several days ago.

As LA2QAA (that's me !!! folks) mentioned, if the beacon continues to transmit
valid data he'd (I'd) be the first to admit I'm wrong and presumably, GM1SXX
would be the second.

However, let it be known ... (Oyez, Oyez, Oyez) ... when we were collecting
data the CW beacon was spitting out 92% rubbish (invalid data) with the
occasional 'correct' block among the invalid ones, just to make life interesting.

My answer to your mail wasn't very helpful Thomas, but those were
the facts as of 2003/2004/2005.

Since over 90% of the data was deemed invalid Thomas, I didn't keep it.

As at 15:30Z 07-March-2009 AO-27, though fully operational, is not even listed on Amsat-NA's satellite status page.

Is this because there are so few volunteers to help out ... ir did 'we' just foget this old plodder?.

Guys! This question has already been answered, several times.

I'm not an expert,but both John LA2QAA and myself spent a lot of time doing serious study of past telemetry from this bird. There are still extensive notes, photos and other stuff available on AO7 for those with a genuine interest. I won't repeat what others have already said and /or posted on this BB.

Jan King and Karl Meinzer are the experts, for AO7 at least, but according to the published data (freely available but ignored by almost everyone) , the data above is complete garbage.

FACT
You should be looking for 649, 650 or 651 as the last value of each data frame. I've already explained why, and for those who bother to read postings on this BB, it should be obvious what is garbage data and what is not. The links to anything needed have already been posted here. I can't understand why there is still speculation and / or confusion about what is valid data or otherwise.

I've already posted a link on this reflector, to a transcript of a three way email QSO between myself, John and Jan King on this matter. It's on this reflector for all to read. You can read the chief designer's words there, should you not believe either myself, LA2QAA or the wealth of data published elsewhere.

For those who don't know or are not old enough, Jan King was the chief designer of AO7.

What I'm seeing posted here, re AO7 TLM, while it may be fun for some, is just garbage generated by the telemetry system clock and data multiplexer circuitry.

UoSAT2 performed a similar trick (I strongly suspect for similar reasons). I suspect that in the past, RS-1 with it's 50155's was doing exactly the same.

Do remember that AO7 has no CPU. The telemetry system, just like that on UoSAT2 was hardwired from first generation CMOS logic. Feed it just enough voltage, and it will 'wake up' and send gobbledygook! This doesn't indicate a working telemetry system.

73 Al.
PS Expert, definition of ... one who is brought in from an outside agency, has travelled 50 miles or more, and is equipped with a briefcase.
I believe there are a few other definitions also doing the rounds :-)

2365. AO-27 schedule

Yahoo group: eu-amsat

From: John Hackett
Topic: 355 Message: 2365

Thanks Thomas,
I've been using D. Carr's page to get updated information
for quite some time now. The Amsat-NA page always seems to be in arrears.

The last time I mentioned it I was told it was because there wern't enough
volunteers to maintain an 'updated' site.

D. Carr's site is proof of the contrary.

All you need do is give the opening key to three trusted personell ... if one
doesn't catch the pertinent information ... another one will.

That's how we run EU-Amsat and it appears to work just fine.

AO-27.

By the way Igor & gang ... privet, AO-27 is never switched on or is never in analogue mode
over Norway ... at least it hasn't been since 1998 and the
current schedule which I just worked out says it's no good for my particular
QTH for the forseeable future.

That's why you don't bump into LA stations every 10Khz on LEO satellites.

AO-51 and VO-52 for 'curiosity' value ... 1 x QSO and that's it ... which explains
the lack of interest in LA for satellites. AO-7 and FO-29 are the only viable options.

The ISS (and AO-27) are non-starters for we over 60 degrees north.

Dew once mention ... "but you have 2 degrees elevation to the ISS" ... he forgot about the
mountains ... they're *NOT* RF transparent at 145Mhz ... though I have used them as passive
TX reflectors at UHF ... as well as utilising them for knife-edge propagation on RX ...
(AO-7) with PH7PCF.

We also tried a bit of PSK31 and SSTV a couple of years ago so I expect that will be the
next 'fashion' on AO-7.

AO51 vs SO50 looks like a ZOO time to time.
What about ISS.. In my town placed a State Museum of Cosmonautics (first in the WorldWide!!!), when have many space exhibits, like ISS copy and other.. but, No mountains in my town :)))

Privet !!! Igor,
Yes, I certainly miss the CW QSO's.

I still have my gear but only with an indoor ARROW aerial but I *WILL* connect
it up again and get back on AO-7.

Remember !!! ... I'll be QRPp so I'll be in competition with the swishers and tuners.

Also ... the ARROW only has 3 elements on 2m so I'll be *DEAF* !!! ... he he he
but those with ears will hear my *SUPER* 2w on TX ... (7 elements).

(I proved this system works with F2IL).

I'll be on my old stamping ground of 145.940 RX +/- doppler from about Tuesday/Wednesday
next week.

Those working Frei Island (me) on IOTA EU-36 will receive the special
commemorative AO-7 anniversary QSL.

CW only - since 2w on an indoor aerial doesn't lend itself very well to
SSB on AO-7.

Also ... Mode-B only, at least until I can work up enough energy to throw a
wire for 10m out of the window.

I'll be listening for you Igor.

Alex still sends an e-mail from time to time but we're still looking for input
for 'Observations from Russia'. Don't forget, you can tell me what you're doing these days
and I'll edit it for you before posting it to <http://www.observations.biz>
Likewise, your radio friends/local club news.

> Dew once mention ... "but you have 2 degrees elevation to the ISS" ... he forgot about the mountains ... they're *NOT* RF transparent at 145Mhz ... though I have used them as passive TX reflectors at UHF ... as well as utilising them for knife-edge propagation on RX ... (AO-7) with PH7PCF.

AO51 vs SO50 looks like a ZOO time to time.

What about ISS.. In my town placed a State Museum of Cosmonautics (first in the WorldWide!!!), when have many space exhibits, like ISS copy and other.. but, No mountains in my town :)))

> We also tried a bit of PSK31 and SSTV a couple of years ago so I expect that will be the next 'fashion' on AO-7.

Hello all

Thanks John for the lovely nice Email.
Really it is so interesting to have all this discussion.

This time I did some of my home work! I have read all
the emails at :-
http://www.observations.biz/AO7_Stuff/

Thanks for release and posting those precious information to all ham community.

But as a student for sure I have few Questions:-

I noticed nothing mention in all emails about Mode-D or the RTTY TLM?

Is RTTY TLM is a new event to AO-7 after awoke from the dead in 2002?

When and who the first Ham detect the return of RTTY TLM?

Dose any one study RTTY TLM after the return in of AO -7 in 2002?

Nader and the group,
I'll try to answer your questions as best I can but
in effect, I 'retired' myself from AO-7 activities a year ago.

After the first unexpected awakening, the RTTY beacon was non-operational
so to the best of my knowledge there is no RTTY data from the first awakening
in 2002 until just last week.

Who was the first to notice the RTTY beacon was operational? ... since I
'retired' I didn't notice but it will be in the Amsat-bb atchives.

Who was the first to copy the RTTY beacon? ... I believe you Nader.

I must admit, since the discussion started I *HAVE* been following the thread
and am even considering coming out of retirement he he he.

Such a pity the electronics are not 100% but remember ... AO-7 has set
MANY records and as GM1SXX has said ... the old girl can still
throw a few 'surprises' at us ... that's why I'm considering ending my 'retirement'.

For thos copying the La2qaa flea power, please note this time I'll be using an Arrow
indoor aerial in a ground floor flat (!!!) ... do I'll be DEAF !!!!.

Why? ...

1) I'm too lazy to put my satellite beams back up.

2) I've been a QRP'er for 42 years.

3) I want to show the potential newcomer that an 80w BRICK and 10 elements is
NOT necessary to work AO-7.

POINT TO PONDER.

Keeping the power low will prolong the satellite's life ... THINK ABOUT IT.

Hi,

My apologies in advance for replying to an email addressed to LA2QAA but since we worked as a team on decoding AO7 telemetry and trying to make sense of it, hopefully I can answer at least part of the question. At the time we worked on the AO7 data, it *was* sending some frames ending in acceptable values.

We never copied any RTTY telemetry, only CW.

Ao7 was designed to send either CW or RTTY telemetry data. The choice was determined by ground command (command uplink). AO7 has a telecommand system like most other birds. It's details are beyond the scope of a simple email but it *is* just feasible (but very unlikely) that AO7 could have been flipped into RTTY Telemetry mode by accidental triggering from a ground based signal.

As I say, it's theoretically possible..... but **very** unlikely:-)

I have no idea of whether latching relays on non-latching types were used in the RTTY/CW telemetry switching. Hopefully someone else can answer that.

IF (and only if), latching relays were used, it's likely that AO7 is now 'stuck' in RTTY mode for good.

IF (as is likely) common non-latching types were used, the bird will probably revert back to CW telemetry the first time it experiences an eclipse (and no power to hold the relay

closed).

For sure the telemetry system is sending garbage, but you can sometimes learn a bit, even from garbage. You won't learn anything from the data... it's garbage after all, but you can look at what 'frames' the data.. the clock and multiplexer.
If the frame sequence is correct, then the clock and multiplexer (latches and shift registers) obviously works.

The A/D converter cannot function without a valid voltage reference... hence the 649/650/651 business. No reference = garbage out.

I'm sure AO7 has a few tricks up her sleeve yet, but I don't think that good telemetry data is one of them.

The matter of latching or non-latching relays is important. Latching relays retain the last state they were in when power fails. Non-latching relays have a default state ... when the power quits, they 'drop out'.
As best I know, only areas of the power system aboard AO7 used latching relays. *IF* this is indeed the case, AO7 will probably revert back to CW telemetry as soon as it hits an eclipse.

AO7 is in a rather hostile orbit for radiation dose. This is in large part why it is unlikely to 'come back' and produce good telemetry.
The solar panels are protected by glass cover-slides. The glass slides are being dosed by strong radiation that damages their surface, darkening the glass and reducing their power output as a function of time. The output of any solar generator decreases with time over the life of the bird. Digital electronics expects to 'see' a minimum voltage on it's supply lines below which it becomes erratic and unreliable. With so little power now available, this is the reason why the transponder FM's and why the telemetry system sends rubbish.

As to who picked up the RTTY telemtry first... sorry, I don't know. perhaps the AMSAT-BB might yield a clue.

I just hope that AO7 can continue to work as a QRP daylight only bird for those who appreciate and value her useful contribution. It makes a pleasant change from some other things I won't mention.

Hello Al, eventually Mike, N1JEZ ?

AMSAT News Service Bulletin 067.04
From AMSAT HQ SILVER SPRING, MD.
March 1, 2009
To All RADIO AMATEURS
BID: $ANS-067.04

AO-7 UHF Beacon Activates RTTY Telemetry

The AO-7 UHF Beacon at 435.100 MHz has been reported as becoming operational. Satellite telemetry in RTTY format is being copied. The AO-7 70-cm beacon was monitored with very strong signals during February 28 passes and also since then. Some reported the beacon initially sounded as if it was in a two-state mode that sounded a bit like RTTY in idle. Successful RTTY decodes have been accomplished using "reverse, 45, 85" parameters.

AO-7 Command Operator, Mike, N1JEZ says, "This is a pretty significant development. Every time I've tried to activate the RTTY system, all I would get is a solid carrier then the bird has reset indicating a lack of power."

[ANS thanks Mike, N1JEZ for the above information]

> >

and I missed this important snippet of info ..... just posted as a nice reminder....

AO-7 Command Operator, Mike, N1JEZ says, "This is a pretty significant development. Every time I've tried to activate the RTTY system, all I would get is a solid carrier then the bird has reset indicating a lack of power." *

If this is the case, AO7 should 'fall out' of RTTY mode the first time it see an eclipse.

Time will tell.

Mike's comments also suggest that at the moment, the power situation onboard AO7 is at least favourable enough to hold the relay coil activated and the relay contacts closed in favour of RTTY over CW.

There's nothing at all new here.... I'm just adding 2+2 and getting err... ummm, four! Should be interesting when it hits eclipse. If I'm right, and my 2+2=4, it'll go to CW. If I'm wrong, it'll stay in RTTY ... and prove that I'm wrong and that a latching relay was used in the command system.

The reality for AO7 doesn't alway fit the published 'facts'. Some changes were made to the flight hardware AFTER the drwaings were completed, usually for practical reasons .... like the CMOS R/C timer instead of the published Xtal one. John LA2QAA discovered this by applying his grey matter to the observed facts, and not by following the party line. Jan confirmed the use of an R/C timer... but it was obvious anyway by the drift in the measurement of the switching times.

Hi Mak & all

Yes this is a sad fact Mak .really very sad .

I and many other hams keeping on posting advice and regulation of the bands plan on many Arabic Ham site eg http://www.laselki.net/vb/

The problem isn't from license amateur!
but from the (user) pirate.

I hope our effort with the official regulation cut that QRM ASAP.

thanks OM

Hi Nader,

we were talking again about this problem. Just I wonder how is possible a pirate station to access this Satellite from Central Africa..... up to Central Europe !!!
It's almost unbelievable, if you think that they use antennas for terrestrial contacts and not Beams which are aimed direct to the Satellite. Therefore I suppose that, the output power is extremely high.

BTW it was not possible for me to pass on Satellite over him, even if my antenna is directional.

I believe this problem is difficult to solve dr Nader. And, you are the only one which can help us due to Arabian language. For the rest European Sat-operators is impossible to understand the conversation which take place and thus to recognise the country - or anything else about this jamming, in order to be able to help you.

73, Mak SV1BSX

Hi mak

Yes many pirate use 1000 watts at VHF with stack yagi for
terrestrial (VHF CB) contacts.!!!!

The story is so long and so complicated
The main factor is the weakness of the regulation in many countries.

dum dam doom !!!!! I lost a new countries last week I just copied
a long nice song via OSCAR BBC satellite.

No women ,no cry ;-)

Here is what i wrote. It is a "live" experience and the guy was using about 30 Watts.

"An operator "generally newbies" who was trying his new set up with a terrestrial beam with no elevation. He was able to receive the sat only
at AOS and LOS when the satellite was low but he call CQ on the whole pass not
knowing he was received OK as the satellite is very sensitive.

On AO-27 we can here a lot of QRM from home phone and taxi that's another proof it take's near nothing to be heard on the sats but a lot to
receive them but many are still trying their luck with duckies and omni terrestrial antennas.

One other proof of it i was testing my transceiver on a mobile dual band antenna (to discover my VHF coax snapped at the antenna
connector..) but i was on AO-16 uplink frequency as i was not able to reach it and while testing i heard myself on the downlink and at TCA
i was Q5 with 50 watts even reducing the power to 25W.

Hello,

On february 22th I made my first satellite contact with G0FGX via ISS. (If you can consider ISS as a satellite) I wanted to try it tonight again when ISS passes my qth.
No I have just made a contact with PH7PCF. This is fun!
Equipment used: Yaesu FT-847 and a vertical goundplane.
I hope to setup some yagis on an elevation system soon.
Been listening alot on VO-52 also but signals are to weak to work that bird with a vertical. I just wanted to share my excitement here, hope you don't mind...

73 from Belgium.
Eric - ON4HF.

Hi Eric
Congratulation Eric for ISS phone contact.

ISS pushing down a lot of power compare to other satellites!
Yes you can work with vertical antenna some satellite
The 1/4 vertical is a good chose , it has more radiation
Pattern up to sky dome compare to 5/8 or 1/3 wavelength vertical.
Enjoy the fun with your setup .
For a simple satellite Yagi see Howard G6lvb website

http://www.g6lvb.com/HomebrewArrow.htm

Hi Eric

Congrat's also for your contacts ! BTW you have to know that, Aldert
PH7PCF is a friend of mine
and also a member of this Group.

As I've asked the Amsat Award manager, the contacts via ISS counting OK
as a satellite QSO - if they are through the ISS-repeater with another Ham,
so you can consider that your ISS-QSOs are valid as Satellite-contacts.

And, of course we are very glad because you shared your excitement here
with us.

Welcome to the "Club" & have fun with Sat's !

73, Mak SV1BSX

Hello,

In the following URL you can find a cute SDR-application. The 2nd waterfall is very interesting for us, as you can listen
on it the VHF satellite subzone between 145.852 - 145.943 MHz:

http://websdr.pa3weg.nl/

Even if the bandwidth is not enough for all Satellites, for VO-52 is perfect. Of course, the Up-Down button into the SDR-page
it is not a very comfortable way in order to correct the frequency due to Doppler, however you can hear.... a few stations !
(For the whole traffic, definitely you need ... Valiums !)

The funny story for me is that, it was possible to hear the traffic on Satellite after the LOS, when the satellite was over
West Europe - out of my range. I believe also that, it's a good experience for outside-Europe operators to hear the traffic over Europe.

Have a nice weekend

www.websdr.org is first page. You can find 3 RX install in PA on 40m, 80m, and 20mssb. Also a cw 20m rx install in USA.
Very excelent recording 23cm EME contest and sat band in 2m also VLF.
I heard AO7 and VO52 crossing PA also i make an interesting experiment. I make few qso's using the 40m SDR RX and my transceiver for TX . 1000km distance between rx antena and tx antenna hi.
73 and have fun

Hi Florian,

tks for additional info, the 23cm capability is very interesting indeed, especially in case where the
antenna is a... 20m Dish !
I like also the 20m CW Web-SDR.... glory old days of Ham-radio.

2388. AO-51 Mode V/S worked with indoor antenna!

Yahoo group: eu-amsat
Date: 2009-03-19 21:23:30 UTC
From: dh5mk
Topic: 2388 Message: 2388

Hi folks,
just some days ago I put up my old 19-turn helical with the DB6NT downconverter and today I could manage a short contact to GM0FMW !
But using a indoor antenna is realy the right way on 13cm ... beleave me !! Signals are extraordinary weak. Using the same antenna while pointing out of the window, gives strong signals. But the pantiles on the roof are a fantastic attenuator !! :-((
So I keep on trying ...

so long

so I tried again at a 55deg pass a little eastern, and it works better !!
I worked G3WDG/p and PA1IVO/p but thats it ... no zoo!!! Great mode, like the SSB uplink!!
Center frequency seems very exact to 2.401200GHz. I put that frequency in SatPC32 and it works good. Can anyone verify that?
... keep on trying ...

Hello Michael

Today at around 16:45z and 43 deg elevation I heard for the first time
AO-51 in Mode-S for a very short time. I switched to USB and heard a
short chirp. I think it cames from the FM repeater. Tomorrow I will
verify it. My roof does mute my dish antenna too much, I think.

2392. ISS activity

Yahoo group: eu-amsat
Date: 2009-03-25 08:20:03 UTC
From: Allan Copland
Topic: 2392 Message: 2392

Hi,

The ISS seems to be quite busy as a flying repeater of late. Last night, while sitting indoors wtching TV, downstairs behind 14 inch thick solid brick walls and one double glazed window, I easily copied the ISS.... it was booming in, on my FT-60 handy and little whip.

Lots of European stations 'doing battle' on FM. Pretty much like AO51.... totally disorganised chaos. I'm guessing they are running a few watts 'up there' to put in such a strong signal on my puny little whip aerial.

If you like such things.... why not join in the chaos :-) Downlink is on 145.800. I believe the uplink is 437.800. FM only, bad manners welcomed.

To me it just sounded like a really big pile-up on HF..... only a lot worse, thanks to capture effect.

I doubt if you'd need a real antenna on uplink or downlink. 19.25 inches of string soaked in salt water should do.

I used a quarterwave whip to listen, but for the life of me, I can't see the point of it all. It's a jungle out there. Still, if you like that sort of thing, I can give you a little advice. Run the maximum legal power. That way you *might just* have a chance of 'breaking the pile-up' :-)

Hi Allan,

They are running QRP on the ISS - about 5 watts output from the Kenwood D700 but as you say it's all you need for a strong downlink signal.

It was good to see that a UK Foundation licence holder Callum MM3YCG had a QSO with one of the Astronuats Mike KE5AIT (using NA1SS) a coupe of weeks ago. Callum was running 10 watts on 70cm for the contact.

The video of the QSO can be seen at

http://www.southgatearc.org/news/march2009/uk_foundation_holder_talks_to_astronaut.htm

On the 0005Z March 26 (2005 EDT on the 25) i just watch ISS lead by Discovery dimmer and slightly below ISS. A great space mechanic lesson
an orbital body reducing his altitude increased his speed or it's an optical illusion?

Physics has never been my taste of tea but always nice to watch passing space things over us and in bonus our seasonal wild white goose and
wild duck and birds migration heading north with their usual sound. (resting and feeding place about 45mn from here see:
http://www.pbase.com/descar/ornitho). If clear evening sky remain i will try some photos of the twin moving star

2396. Earth-Venus-Earth - Video

Yahoo group: eu-amsat
Date: 2009-03-28 12:04:11 UTC
From: m5aka@yahoo.co.uk
Topic: 2396 Message: 2396

The reception of Amateur Radio signals bounced off the planet Venus is an impressive acheivement details of which can be seen at

http://www.southgatearc.org/news/march2009/eve.htm

A video showing Karl Meinzer DJ4ZC, Freddy ON6UG and the 2.4 GHz amplifier used to acheive Earth-Venus-Earth (EVE)can be seen at

http://tinyurl.com/EVE13cmAmp

The 2.4 GHz amplifier will be used by Radio Amateurs to sent signals to control the P5-A Amateur Radio Mars spacecraft. On its journey to Mars it will initially swing by Venus.

Google as you probably know doesn't do things in real time so this is really just an animation.

Here's another one. This was based on live data at the time it was made. It's old, but appropriate to show how many birds are up there.
http://www.observations.biz/Observations_from_Scotland/Observations_2007_04_04m.htm

Of course, satellites make up only a small part of the total of the items cluttering up near-Earth space. If you were to count anything bigger than 1Cm in diameter, the numbers become frightening. If you were to include other small debris such as paint flakes (dangerous to manned spaceflight and damaging to satellites) the numbers are 'astronomical'. That's without mentioning the hundreds of thousands of droplets of radioactive sodium/potassium leaked from old RORSATS around 1000Kms that hamper Gamma Ray astronomy.

It is both appropriate and fitting that so many operators offered their condolences here and on the Amsat-bb for the very sad loss of my dear friend Mak SV1BSX.

He was an inspiration to many newcomers to the satellite scene and his web pages will remain a source of inspiration to future potential Amateur satellite operators.

Hello all.

I would like to express my deepest sorrow and my heartfelt condolences for the loss of Makis to the group.

The tragic loss struck me deep and left many "why him?" inside my head. I still remember how happy I was when I worked him on our 1st sat qso yelling "You see my friend I did it!" and also Makis answering my questions on the "birds" during my first hamradio steps.

Inside my heart he will be greatly missed not only as a friend but also as my fist Sat Elmer. No comfort is quite enough to replace the loss.

His key is silent now on the birds but his legacy and his love will remain with us always. I remember telling him last time we met that "everything is a road".

Bon voyage, my friend. God bless you.

From many various news agencies the satellite did not make it to the orbit the missile's first stage fell into the Sea of Japan, and the
remaining stages -- along with a satellite payload -- landed in the Pacific Ocean.

It is now 2246 EDT April 5 and this post is still not apearing on AMSAT-BB!

Is the censor in chief is off duty?

Just for the record here is a statement from the US president Obama and i quote "
"President Barack Obama has offered an apology for the
Bush era, declaring that America had 'shown arrogance and been dismissive, even derisive'
towards its allies." end of quote.

The question is where AMSAT-NA IS STANDING?

There is a huge difference between censoring and moderating

The contact index tab looks like appealing in the actual context...It cost nothing to
report and ask for an explanation!

Monday, 13. April 2009, 08:57:19

Hi,

After no joy with AO-7 this morning, hoping that there may be some European stations on being a long weekend, I also gave FO-29 a go.

What a surprize to hear and work Iain, 5B4AGY in Cyprus in KM64ev (distance = 6737Km).

This is my first contact with 5B4 via sat - and his first to ZS via FO-29.

I have a recording of the QSO on: -
http://my.opera.com/zs6tw/blog/2009/04/13/5b4agy-cyprus-km64ev-worked-via-fo-29

(If by clicking on this your player does not want to play correctly - right-click and download first, then play from disk. Some browsers are broken!!)

The sat was already just under 2 degrees when I heard him, so we had to be pretty fast.

Right at the end I also heard TR8CA calling, but by then the pass was finished for me.

Good SAT DX!

2431. ANUSAT launched

Yahoo group: eu-amsat
Date: 2009-04-22 21:15:35 UTC
From: st2nh
Topic: 2431 Message: 2431

The student-built 40-kg micro educational satellite ANUSAT carrying an Amateur Radio payload was launched on Monday April 20 from the Indian Space Research Organisation (ISRO) Satish Dhawan space centre.

The launch vehicle was ISRO's PSLV-C12, which as well as ANUSAT also carried RISAT-2, a 300-kg radar imaging satellite.

ANUSAT (Anna University Satellite) is the first satellite built by an Indian University under the overall guidance of ISRO and will demonstrate the technologies related to message store and forward operations.

The Amateur Radio payload is a 145/435 MHz Digital Store and Forward system developed by students at the university and the planned orbit was at 550 km with an inclination of 41 degrees.

2432. ANUSAT - amateur satellite ??.

Yahoo group: eu-amsat
Date: 2009-04-22 21:53:07 UTC
From: John Hackett
Topic: 2431 Message: 2432

Hello Group,
Regarding the Anusat satellite. I picked up the
following snippet ...

>"This micro satellite will help in storing and forwarding data.
>It
will help us send confidential data, like examination papers.

>Anna University
vice-chancellor Dr P. Mannar Jawahar.

One wonders (specifically, LA2QAA) - what 'confidential data like examination papers' - would be doing on an 'amateur satellite'.

Apparently, a V/U store and forward satellite, does anyone have any pertinent information regarding freqencies and a timeframe for when this satellite will be available for amateur use ??.

> like examination papers' - would be doing on an 'amateur satellite'.

I am not aware that anyone at the University has said that confidential data would be passed by the satellite on an Amateur frequency. Do you have any University references for that quote?

My understanding was that this was a technology demonstrator for a store and forward system.

While you could in theory build a dedicated satellite for handling exam papers you have to ask why bother since you could use any number of far cheaper alternative systems.

It sounds to me like the type of paper justication you might make to get funds for a demonstrator project. Bear in mind that the mass media can distort things that they don't understand.

One of the students, Sidharth Balasubramanian, who was involved in the development of the ANUSAT communications system has some information on his website. No specific freqs quoted except for the 149.522 MHz command receiver, see

2434. Anusat - the reply.

Yahoo group: eu-amsat
Date: 2009-04-22 22:53:27 UTC
From: John Hackett
Topic: 2431 Message: 2434

Trevor,
To answer your question ...

I followed the third link from the Southgate Amateur Radio Club bulletin
regarding ANUSAT and the quote to which you refer..

The complete text follows ...

(According to the story, the quote is by the Vice Chancellor of the Anne
University ... which is why I found it worthy of note).

ANUSAT being an acronym for ANne University Satellite

While not SPECIFICALLY stating exam results would be tramsmitted by
this satellite Dr P. M. Jawahar's remarks are quoted in the same ontext
and paragraph as the the rest of the information regarding the Anusat satellite, which,
according the Amsat India website is an 'AMATEUR' satellite.

12 years ago we were warned by Vommander John Brannegan that we would lose
the amateur satellite bands to the universities.

It looks like Winston Churchill was on the ball as well ... this is not the end, it's not
even the beginning of the end - but perhaps it's the end of the beginning.

(With apologies to Winnie The Poo).

India Launches University-built Satellite

By P. Vijian

NEW DELHI, April 20 (Bernama) -- India successfully placed two
satellites in the sky early today, one of which was designed and built
by Anna University in Chennai -- the first satellite built by an Indian
university.

The Polar Satellite Launch Vehicle (PSLV-C-12) soared into the sky
at 6.45am (9.15am in Malaysia) from the Sriharikota spaceport in Andra
Pradesh, in south India, lifting the two satellites, RISAT-2 and ANUSAT
-- an abbreviation for Anna University Satellite.

"The indigenous ANUSAT was designed, built and fabricated by 10
faculty members from Anna University. It took us nearly eight years to
complete.

"This micro satellite will help in storing and forwarding data. It will help us send confidential data, like examination papers. This is a proud moment for India and the university," Anna University vice-chancellor Dr P. Mannar Jawahar told Bernama.

The India Space Research Organisation (ISRO) funded the ANUSAT communication satellite, weighing 40kg and costing nearly RM5 million. It has a life span of two years.

The Israel-designed RISAT-2 or Radar Imaging Satellite, weighing 300kg, with all-weather capability to take images of the earth, would enhance ISRO's disaster management ability.

"RISAT will help us in monitoring natural disasters like floods and cyclones. It has a life span of three years. ANUSAT is the first experimental communication satellite built by an Indian university under the guidance of ISRO," ISRO spokesperson S. Sathis told Bernama.

Last October, ISRO launched the Chandrayaan-1 spacecraft that is now exploring the moon from lunar orbit.

I am not aware that anyone at the University has said that confidential data would be passed by the satellite on an Amateur frequency. Do you have any University references for that quote?

My understanding was that this was a technology demonstrator for a store and forward system.

While you could in theory build a dedicated satellite for handling exam papers you have to ask why bother since you could use any number of far cheaper alternative systems.

It sounds to me like the type of paper justication you might make to get funds for a demonstrator project. Bear in mind that the mass media can distort things that they don't understand.

One of the students, Sidharth Balasubramanian, who was involved in the development of the ANUSAT communications system has some information on his website. No specific freqs quoted except for the 149.522 MHz command receiver, see

With reference to my posts about ANUSAT.

From the following statement ...

>The student-built 40-kg micro educational satellite
>ANUSAT carrying an Amateur Radio payload was launched
>on Monday April 20 from the Indian Space Research

>Organisation (ISRO) Satish Dhawan space centre.

I assumed ANUSAT to be an 'amateur satellite.

Perhaps I presumed too much.

A question inducing other ones. IF something is on the Ham bands it should be freely
accessible by ALL the international amateur radio
operator will we be able to access it? It will make Mr Brunninga here very happy as it will
fulfil one of his dream to have an emergency
tool box flying in space in case of an emergency situation. This store an forward
capabilities can be useful for emergencies.

As the student notes available i just hope they will have some form of coding...but again
secret coding is not supposed to be illegal on
the ham bands?

Is IARU is failing here or are they sleeping on the switch?

Or.. If the mountain don't comes to you, you have to climb the mountain.

Hello All

I have wrote a mail to Sidbarth for informations about the amateur s&f payload. I will his answer publish here, if I any get.

I asked also in the VUSAT group 2 times before the launch. There was no OM who knows details about ANUSAT. There was also no frequency coordination at IARU for the s&f payload.

Hello Group,
As is my want - I opened my gob (mouth, to you) once again
without putting my brain in gear first.

The 'intelligent' (so he says) half of the OBSERVATIONS team, Al GM1SXX had
already put some pertinent ANUSAT information on the OBSERVATIONS website.
(Didn't notice it diddle I).

<http://www.observations.biz/University_me_toos/Anusat.pdf>

However, my posts *DO* illustrate precisely what Commander John Brannegan
warned about several years ago. It's now far too late to do anything about it.

To paraphrase the Commander ... we only have ourselves to blame.

Of course, one *CAN* emulate an ostrich (bury one's head in the sand) and
convince oneself that amateurs are going to benefit from having our frequencies
taken over ...

Each is entitled to his/her own opinion, I'm just mentioning that I agree with what John
Brannegan wrote.

73 John. <la2qaa@amsat.org>

Maybe I'm not the only one with my brain out of gear.

Just a couple of small gripes from me.

1 Amateur radio communication should be non-confidential. How does that square with .....
helping send confidential data... like exam papers!!

and
2 It seems to be a private bird for non-amateur use, but on the amateur satellite
allocations.

Of course, who cares anyway. 'The horse bolted from the stable many years ago and only a
few of us are still looking for it' :-)

I listed some info on it about a week ago on www.observations.biz.
Look for YAUB (yet another University Bird :-)
Perhaps YABH...'yet another bands hijack' would have been more appropriate.

Dear Group,

This is my first comment about "new satellites". From what I have read, this is obviously NOT an amateur satellite however it has another b****y FM transponder operating in our amateur bands. Some Government body has or must be associated with the funding and the development and launch of this satellite/package. The country that funded it, if it is a member of the IARU, should be "responsible" for its compliance with the requirements of an amateur satellite including, in my view frequency clearance and co-ordination. This appears not to be the case and from what I have read this is another commercial satellite using amateur radio bands. If this is, as it appears, a commercial satellite it should use non-amateur frequency allocations. It appears to me that Universities in many countries believe that they can use our frequency allocations at will for almost any application!

That said - Why can't AMSAT talk to Governments that are capable of developing and launching satellites and convince them to develop what is mainly (say 80% - there needs to be a rule) an amateur satellite with one or more linear transponders with properly co-ordinated and cleared frequencies?

Amateur Satellite operation used to be more interesting and challenging (AO-40 etc). I am almost at the point of giving up satellite operation given the current state of the "birds"!!!

I apologise if this offends anyone but these are my personal views

Hello Al and group

This is the most informative document I've ever seen about ANUSat.
On page 3 the uplink and downlink frequencies are 145.8 and 435 MHz.
But I think, this are the edge freqs of our satellite bands and not
the exact frequencies.

This is the elset:

OBJECT B
1 34808U 09019B 09113.51959737 -.00000290 00000-0 00000+0 0 130
2 34808 041.2104 147.0400 0109855 029.0564 131.0207 15.29389516 538

After having now read the detailed bumph on ANUSAT, I again ask ...

What advantage has this obvious 'commercial' satellite for amateur radio satellite operators? ... and ... what is it doing the the Amateur satellite band anyway?.

I too looked at the IARU frequency coordinating list but didn't find ANUSAT. I think it was Thomas or Luc, or both, who asked if the IARU advisory committee were sleeping.

I think they must have been.

Probably, it's not mandatory to be 'blessed' by the IARU but there's little doubt in my mind that this blatant ignoring of the unwritten 'rules' will lead to a spate of clones of the clones ... culminating in amateurs being banned from what were once 'amateur' frequencies.

As was mentioned previously - and a very good and valid point it was - *SOMEBODY* must have given their approval - (he means: sold us down the Swannee!) but it'd unlikely we'll ever know who - for how much - and why ... and there's nothing we can do about it anyway, after we ichose to ignore the last 12 years of warnings that this would happen.

Some will say I have a pessimistic view of the state of affairs ... but looking at the current crop of satellites and comparing them to the days of RS-10, RS-12, RS-15, FO-20 and AO-13 ... I for one wouldn't use the term 'progress'.

I think most operators would agree if one *WAS* to go for a LEO satellite, a LINEAR bird of the RS type would have been a better choice, allowing several users at the same time.

That's my opinion - and I'm sticking to it ... and no !!!, I'm *NOT* asking you (whoever you are) to agree with me.

2444. Unless I'm mistaken....

Yahoo group: eu-amsat
Date: 2009-04-23 16:28:46 UTC
From: Allan Copland
Topic: 2444 Message: 2444

Hi Folks,

One thing *does* interest me about ANUSAT.

Unless I'm mistaken, it seems to be built around the same general spaceframe design as was HM-1 ...AKA HAMSAT, AKA VO52.

This suggests that these rather substantial satellite buses (600*600*600mm and 40Kgs mass) with excellent power availability (40W @BOL) and now a 10AH battery rather than the smaller (5 or 6 I think from memory), one on HM-1, are being provided and paid for by ISRO rather than the students, with only some of the onboard systems being university supplied.

This is a completely different scenario from CUBESATs where market costs prevail and the would-be builder has to cover all the costs including launch, at market rates.

The situation is similar in some regards to the old Radio Sport birds where the spaceframes were in large part, reconditioned Small Strela (Strela-1m) ex-military items carrying student-built electronics.
The Strela-1m was a store-dump tactical comsat system used by the Russian Military.

Still, at least the RS birds delivered something of use to the average radio amateur that ANUSAT wont.

73 Al.
GM1SXX
PS.. still guessing?
For those not old enough to remember, some of the RS birds had incredibly sensitive linear transponders.

Hello John

ANUSat has 2 payloads. One for the universities with uplink and downlink on VHF 137 / 149 MHz (see PDF). The other payload is this "curious" store & forward payload with uplink on our 2m and downlink on our 70cm band. I think it is for 1200 bps Packet Radio in AFSK FM. See also http://beswaminathan.googlepages.com/Anusat.pdf

BUT (!) we have absolutely no informations about this payload. Also AMSAT-VU has no information. There was also no frequency coordination by IARU. I don't know the cause of this misinformation.

Topic: 2441 Message: 2447

Roger Thomas,
There's some information on <http://www.observations.biz/>

There's also a picture of Hamsat 2 but I seem to recall reading some time ago
that this was in fact a 'model' - (as opposed to a real 'flight' construction).

However, I have no verification of that last statement, I may (or may not) be
confusing it with another model someone in Amsat-India built a while back, to illistrate
the planned Hamsat 2.

The 'Injun' Space organisation (ISRO) seems to have taken a leaf out of the
Russian Cosmotras's books regarding keeping information under wraps.

Hi
Hallo Thomas and all friends
I think i found a possible explanation to this weared satellite.
Maby it was build by the students from Indian secret service.
The local KGB.
So all the mesage will be encrypted. They put the news online for us more like a chalenge to break the code. Something like a secret code beta tester.
I'm in!
.....
And seriouse, real problem is what is happening with IARU?
The hamradio bands are free to use but acording the law only by autorized hamradio stations.

Let us wait and see!!

Some History !!

1981: UoSAT-OSCAR 9

Great Britain was an early leader in spaceflight and satellite technology, launching its Black Knight satellite from Australia in 1971. Students at the University of Surrey were eager to get hands on experience. Those who were radio amateurs designed and built a Phase-2 hamsat known as UoSAT, short for University of Surrey Satellite.

1970: OSCAR-5

OSCAR-5, also known as Australis-OSCAR-5, was designed and built by students in the Astronautical Society and Radio Club at the University of Melbourne, Australia.

From: Luc Leblanc
Topic: 2451 Message: 2451

On the 1809 pass i heard G1OCN but he never hear me even if i was able to hear my downlink at this very low pass 5 deg max.
Just in case someone can pass him this info.

2452. LEO Distance.

Yahoo group: eu-amsat
Date: 2009-04-25 19:06:26 UTC
From: John Hackett
Topic: 2452 Message: 2452
Attachments: 1 described; binary payloads are missing from this source WARC

Hello Group,
If one looks at the attached pic of an SO-50 pass from Nova
for this evening, one will no doubt notice that the maximum (theoretical)
distance one can work is 6295 Km - (according to Ask Jeeves) - from Porto
in Portugal in the west to Zomin, Uzbekistan in the east.

Now, by anybody's! standards that's quite a distance for a LEO fchugging along
at only 6000 Km over the earth - (give or take the odd fathom or two).

All we need now is to get the Uzbeki's up and running with a 74.4 hertz tone.

The particular orbit I've illustrated also covers Svalbard in the north to southern
Libya in the south ... (three continents folks, Europe, Africa and Asia).

Since this aging satellite is 'underpopulated' and slightly harder to work, it might
be a good candidate for relieving some of the tension on AO-51.

Details of how to work it follows ...

NB.

There have been unconfirmed reports on the amsat-bb remailer that SO-50 has

shifted downlink frequency as much as 5khz up. This both from Europe.

.....
.....

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.

The order of operation is thus: (allow for Doppler as necessary)

1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
on board the spacecraft.

2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off
within the 10 Minute window.

3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.
.....
.....

Just my two quid's worth.

73 John. <la2qaa@...>

2453. New to Satellites

Yahoo group: eu-amsat
Date: 2009-04-27 04:43:00 UTC
From: harry_7z1hl
Topic: 2453 Message: 2453

Hey All,
I am brandnew into the satellite subject and would like to briefly introduce myself. Harry, German, 7Z1HL, age 54, location Riyadh (LL34jr), TRX IC910H, antennas homebuilt 4-el VHF and 8-el UHF (tnx to G0KSC design)at 30deg elevation with TV-rotor.
After abt 40.000 CW-QSO on HF within 3 years I thought it's time for a change, hence my sudden interest (and investment) in satellites. I managed so far 2 QSO and could have done more if I knew how to handle my chaos of all the fequency adjustments for inverting and doppler etc within the given time of a few minutes that the bird is available.
Hence a quick question: What is the best practice to set my TX frequency correctly when I hear someone calling cq on an inverting linear transponder and I don't want to disturb others too much with whistling and tuning?
Also, is there any CW on the satellites? I love CW but did not hear any signs of it yet from space...
Anyway, hope to meet you soon on air (or rather vacuum) and look forward to any response.
73, Harry, 7Z1HL

I know one way - using tracking software. You transceiver must have interface for it. I remember Orbitron, SatPC32, Ham Radio DeLuxe, and using first two. But some words about tuning. If you transmit dots series for a short time and quickly tuning you TX for listening you own, it's not a fatal problem for linear birds, but critical for FM.

> Also, is there any CW on the satellites? I love CW but did not hear any signs of it yet from space...

Yes, CW is live :) But not fair activity, only 1-2 station per session via VO-52. Especially FO-29 bird. Usually no CW op's on this bird.
Via AO-7 you may heard Up to 3-5 CW stations fer session, but at the next orbit you will heard the same calls :)

> Anyway, hope to meet you soon on air (or rather vacuum) and look forward to any response.

Hey Nader,
thanks for your welcoming words. I found out that there is a lot to learn for working the satellites efficiently, but that's what a hobby is about. If I have any urgent issues I will call you, I have your number. Otherwise I will go through this forum, hopefully to the benefit of other readers. I hope to meet you "upstairs", hihi.

Hello Harry,

I am also new on satellites after 20 years making ssb/cw qso's on HF.
For the moment I only work VO-52. Made 2 CW qso's and 2 SSB so far.
Trx is Yaesu FT-847. VHF antenna is a homemade 7 element (DK7ZB design)
UHF antenna is a diamond X300 groundplane but I am building a 12
elements at the moment.
No elevating rotor at the moment.
Doppler shift correction is all automatic with orbitron software.
Hope to work you soon on one of the birds...
Good luck Harry,

Eric.

Hey Eric, also welcome from my side and good luck with getting started. I see you had already CW-QSO, that means I will keep a look out for you on VU-52 and listen for your CW-signals. Related to my work I only have time when it's almost dark here and then many satellites are hibernating to save precious energy. My weekend in Saudi Arabia is Thursday and Friday, which is also not really beneficial for meeting many people on the bands. Anyway, I will look out for you and hope to meet you soon.

2460. New File Folder for beginners

Yahoo group: eu-amsat
Date: 2009-04-28 12:08:34 UTC
From: Allan Copland
Topic: 2460 Message: 2460

Hi Group.

I'm seeing a few posts by newcomers looking for information on Amateur satellites on the reflector. I took the opportunity to post a file containing links I thought might be useful to newcomers in the FILES section of the reflector.

I'd urge other satellite enthusiasts to post their favourite satellite web links in this section as a service to help newcomers 'find their feet'.

Kind Regards,

Al
GM1SXX/AH

PS... /AH = at home with the flu.
No, not THAT sort of flu:-)

Thanks Al. This could help us to become an expert hi.

I just made my 5th contact on VO-52.
Worked so far:
OV5A in CW
SP9FPP in CW and SSB in same pass
EA7HTI in SSB
OK1DMP in CW (just a few minutes ago!)

If I knew this was so easy and exciting, I started sooner with working satellites.
I prefer CW at the moment because my uplink is on a vertical, so signals are a bit weak.

73 and hope to meet new friends on the birds.
Eric.

2463. L BAND RADAR

Yahoo group: eu-amsat
Date: 2009-04-30 22:36:25 UTC
From: Luc Leblanc
Topic: 2463 Message: 2463

IN THE NEWS!!!

Scientists from NASA's Jet Propulsion Laboratory, Pasadena, Calif., and Dryden Flight Research Center, Edwards, Calif., will depart Dryden
Friday, May 1, on a modified NASA Gulfstream III aircraft. In a pod beneath the aircraft's fuselage will be two JPL-developed radars that
are flying test beds for evaluating tools and technologies for future space-based radars.

One of the radars, the L-band wavelength Uninhabited Aerial Vehicle Synthetic Aperture Radar, or UAVSAR, calibrates and supplements
satellite data; the other is a proof-of-concept Ka-band wavelength radar called the Glacier and Land Ice Surface Topography Interferometer,
or GLISTIN.

Did any one knows the frequency of this L-band Radar?

2468. Satellite funding sources!

Yahoo group: eu-amsat
Date: 2009-05-05 13:21:03 UTC
From: Luc Leblanc
Topic: 2468 Message: 2468

It seems that money is available and it is advertised publicly! I don't know if AMSAT-NA is aware of it? interested in it? sensible to it?
able to refocused quickly their goals if any remains? Is a joint support offer to some researchers can be something to be explore?

But in the mean time amateur are bystanders spinning their wheels on ice...

Here is the text:

Please be advised that the NSF Proposal & Award Policies & Procedures Guide (PAPPG) includes revised guidelines to implement the mentoring
provisions of the America COMPETES Act (ACA) (Pub. L. No. 110-69, Aug. 9, 2007.) As specified in the ACA, each proposal that requests
funding to support postdoctoral researchers must include a description of the mentoring activities that will be provided for such
individuals. Proposals that do not comply with this requirement will be returned without review (see the PAPP Guide Part I: Grant Proposal
Guide Chapter II for further information about the implementation of this new requirement).

Beginning in 2009, NSF expects to launch two to three P-PODs every year, accommodating at least as many (two to six) individual satellite
missions. This solicitation covers proposals for science missions to include satellite development, construction, testing and operation as
well as data distribution and scientific analysis.

2469. Three new CUBESATs..... Yippee!

Yahoo group: eu-amsat
Date: 2009-05-05 13:33:09 UTC
From: Allan Copland
Topic: 2469 Message: 2469

Hi Group.

Three new CUBEsats I can't wait! I've been reading up on these birds.

Pharmasat 1
PharmaSat 1 is the first mission in NASA MicroSat Free Flyer (µSat-FF) Project, a progressive, 4 mission, 5 year effort that is targeted towards developing and demonstrating autonomous nanosatellite space platforms and technologies to support multidisciplinary science investigations

HawkSat 1 is Hawk Institute for Space Sciences (HISS) first satellite and will utilize commercial off-the-shelf components. Because of a fast-track production schedule planned to meet the upcoming launch date, the HISS design will leverage the strengths of a CubeSat kit produced by Pumpkin, Inc., a firm specializing in satellite design kits

CP6 is a 1kg cubesat project to test attitude determination and control via magnetometers and magnetorquers. The secondary mission is earth observation via two on-board cameras. Will also carry an experimental deorbit tether. A UHF transceiver will be carried with CW and 1200bd FSK AX25 transmit capabilities.

DATA Source : Gunter's Space Place.

A major contribution surely for amateur Satellite operators.... not!
Still, the good news is that the launcher will (or should) place them in a low LEO from which they should decay quickly... so it's not all bad news.

Al.

2470. Orbitron and FT-847.

Yahoo group: eu-amsat
Date: 2009-05-05 19:55:48 UTC
From: Eric Knaps, ON4HF
Topic: 2470 Message: 2470

Hello sat friends,

I am using orbitron prediction software connected with my yaesu ft-847 via WispDDE for frequency control.(up and downlink)
When I work, let's say on Hamsat VO-52, my frequencies are ok. But after a while my uplink frequency is drifting away and getting worse.
I always have to re-enter the uplink frequency (slightly different) in orbitron during a pass, starting the WispDDE link again and then it's fine again.
But after some minutes the frequency is again drifted away. Is there a cure for this problem?

By the way, did you know that Hamsat VO-52 celebrates his 4th birthday today?

73
Eric.

> But in the mean time amateur are bystanders spinning their wheels on ice...

Well Luc, I looked at the promise of funding but I don't see how it is of much use or interest to AMSAT. The offer seems to be the possibility to fly a CUBESAT with it's 2 to 3 watt power generation capability. Remembering that such a bird would have to cope with eclipses, it doesn't leave much useful power to do anything of use to the average radio amateur, looking for a transponding satellite.
Of course, if your thing is University 'me-too's', why not lobby your local AMSAT representative. If you find the offer exciting... why not? IMHO, this offer is clearly aimed at the educational sector and not the amateur radio satellite community. AMSAT don't get preferential offers any more. That's a perk that's had it's day.

HI OM Luc

Here is my Idea of more Funding sources!
for sure many wll say this is against Amateur Regulation!!

How much cash we can gain from to the big companies
if we stick their logo on the sat frame and on our QSL cards??

Silly idea but it may work!

Hi Nader and Allan

I remember years ago Kodack or Fujii (I could be wrong here) wants to fly a sat where a loop message should be played 24/7. It was turned
down even if the message was saying something like "This is AO-XX an amateur radio satellite sponsored by Kodack..." we can hear actually
some bird sounds on FO-29 and nobody is complaining! Why not a big company logo on a QSL card if it can put a satellite in space?

An excellent idea Nader. I also even suggest that a sponsoring company can have his logo on an amateur satellite.

To answer Allan question even if i will always believe the LEO sats are not the way to go, instead of doing nothing could be AMSAT-NA can
take some time to see if they can have a joint venture with those universities even if they are quite able to do their own things without
AMSAT.

What else remain for AMSAT? I'm tempted to say nothing? It's look like a mission and goals bankruptcy! Very sad to say but 2008 was a very
hollow year they reach as the economy an historical low and 2009 does not look like much better.

Amateur satellite users are living on their remains AO-07 a Zombie sat AO-16 is shaking, FO-29 and AO-27 fell down like the Christ for

their second time but they manage to get up again until their last fall. VO-52 and AO-51 and ISS remain in good shape but with the time
passing they will too reach the world of the deads.

The only light we can see is coming from AMSAT-DL but there too things are not better on the side of a free ride or at least a cheap one.

If one day all the amateur satellite stop working i don't know what i will do with my setup here? And i don't know what the satellite world
looks like in Australia and New Zeland? with the LEO fleet box sat!s They surely missed AO-40.

That's why i say instead of doing nothing AMSAT can try to get involved with the universities and the researchers.

P.S. what about a couple of LEO sat deployed with their transponder linked? is a near HEO foot print can be achieved? even in a low orbit
with 3 sats 4 sats or 5 sats? Could be a bunch of cubes can makes the job? If 3 satellites are moving at the same speed and if they remain
exactly at the same distance form each others is a zero doppler can be possible between them making an excellent way to even linked single
channel sats.

Have a good nite folk's

AMSAT isn't doing nothing. I remember delegates being told at a Univerity of Surrey 'bash' many years ago that 'if AMSAT didn't get into bed with the Universities, the organisation would have no fuiture'..... or something like that...worded in a very similar manner.

They did... and look whats happened. Lots of Cubesats (to win degrees for the students) that mostly are pretty much clones of each other and have nothing of interest on board for the average Joe Ham, but of course masquerading as 'amateur radio satellites' to obtain a free downlink.
A win win situation for the Universities.
What did AMSAT gain from the 'new order'?.... diddley.
Nothing at all 'rubbed off' on AMSAT as a result of cosying up with the Universities.

I might suggest 'waking up and smelling the coffee' but it's at least a decade too late for that. Perhaps more of us should have stood up against the AMSAT propaganda machine. As I've mentioned many times to people... see SATGEN268
http://www.observations.biz/Satgen/sgen268.txt
Academia is all about furthering academia..... it's not about providing useful amateur satellite transponders.
As my old granny used to say....'Don't expect anything and you won't be disappointed'.

There *is* a funding source for AMSAT birds..... us!
The problem then becones what to subsidise.
Not everyone wants Molniyas or prestige projects like AO-40. We have to pay full whack for launches now.... so small is beautiful... but IMHO NOT cubesat sized. The CUBESAT format is useless for transponder birds.
Smaller eggs and baskets are now required.
In the real world, it's all too common nowadays. It's called downsizing.

Hello Nader and group

No, its not silly, this is a very good idea to fly the logo to space.
See the example of SwissCube: http://swisscube.epfl.ch/page30936.html

But a logo on our QSL-cards is abjectly.

Don't forget, HAM radio is a hobby and not a business. If we mean, we can go allone with new satellites and launches, then we need a few generous millionaires. Otherwise we have to join with Universities or other organisations. To earn money from ministries is also difficult today. To inveigh against the Universities and their CubeSats is the wrong way to earn money.

Dear Al

As you know, we live in a democracy. A group want to go with unis "to bed", other like you wants downsizing and other wants a HEO in orbit. Thats democracy pure - wonderful!

In the meantime I go with all HAM- and CubeSats "to bed". This is my weekend hobby. And since 3 years I'm also QRV on 10m if the band is open.

"Take the bright side of life... " - with no apologies to Monty Pythons. :-)

I'm simply reporting on what was said. Nothing more. And the 'group' concerned was AMSAT-NA, ('big daddy' AMSAT) trying to convince the AMSAT-UK membership of the merit of their 'wonderful' idea.

Some of the remainder of my post was personal opinion(to which I'm entitled).

I personally happen to believe that that 'getting into bed' with the Universities was an absolutely lousy idea, but the AMSAT 'brass' liked it, so it happened. Thats 'democracy' in action too. Somebody (not me!) voted them in... and they make decisions on OUR behalf, with little or no real consultation with the 'troops' despite cheap and effective technologies to do so being freely available at little, or no cost at all. (try Googling Surveymonkey)

Of course if you don't fancy that sort of democracy, you could always join the Communist party or the Flat Earth society. You do at least have that freedom :-)

'Always look on the bright side of life'

I agree, and I always evdeavour to, but I do believe that some ideas stink. That was one of them IMHO. I can't see any merit whatsoever in it. It all goes one way.

Meanwhile, there's a funding crisis. Lots of ideas, 'vapourware', part built birds and very little chance of seeing more than very few of them lbeing aunched in the present climate. Perhaps a big change in focus to smaller, much less ambitious and fewer projects is needed. It's pretty much all we can afford. And lest you suggest I'm being otherwise... I *am* being optimistic.

I'm wondering if anyone within AMSAT has considered approaching ISRO
for a future launch opportunity.

Hi all

Other idea of satellite funding .

Donation from old timer VIP Amateur operator .

eg.....

Talal BIn Abdul Aziz is a wll known old timer Amateur operator HZ1TA/SU1UN and still he loves the Amateur hobby as he mentions this
during a recent TV show ,His son is Prince Al-Waleed bin Talal bin Abdul Aziz Al Saud Arabic: is a member of the Saudi Royal Family. He is the nephew of the Saudi Arabia King Abdullah .according to the Arabian Business rich list published December 2, 2008. He is ranked by Forbes as the 22nd richest person in the world.

So who can do the contact to an old timer rich VIP ham for Donation

73 , Nader

I agree! never expect a NO or a YES just ask for it and if you speak the same language you have a +

If you have ever had a table at a hamfest you will be asthonisgh to see how many people ask for an item price on your table and just pay
that amount. When i am a buyer i always start with an insulting offer the worse you can get it's a loud NO but it is worthy if you bring
someone with you and just ask him to return to this table later and just offer 25% more, you often got a deal...

Bottom line the silliest idea are always those who work's!

P.S. my goal with this thread is to try to awake us about the void we are in actually.

HI

Yes I can do the contact,I have many friends at Hzland (VIP friends)!!

But IMHO the proper approach to such VIP person suppose to be via
well known Organization eg AMSAT-DL.

For sure we can start this just by sending an elegant letters from such Organizations.

Let us try ,So who can inform those Orgnazations about our ideas.

;-)

Yet again, this type of source has been used before, but 'there's no such thing as a free lunch'. Large donations generally come with 'strings' attached, such as flying a specific payload or flying a certain experiment. Democracy? Well thats goes straight out the nearest window. I think the real issue here is not so much lack of funding as supporting too many projects. The goalposts have been moved since the good old days so we must be less ambitious in terms of what we can have launched.

Large donations generally come with 'strings' attached, such as flying a specific payload or flying a certain experiment. Democracy? Well thats goes straight out the nearest window. I think the real issue here is not so much lack of funding as supporting too many projects. The goalposts have been moved since the good old days so we must be less ambitious in terms of what we can have launched.

Actually, I'm a realist. I'm not a pessimistic type of person, but I do realise that the lack of a focused overall strategy is part of the 'problem'. The money is out there, but the fact is that there are far too many competing demands chasing it.
How about 'simpler,fewer,less ambitious' as a slogan ..... cutting the cloth to suit the available budget. I suspect that many of the amateur satellites currently being built or in development simply won't ever fly because the money is simply not available to launch them.

As to external money sources. Money and altruistism don't usually go hand in hand. There are almost always strings attached. If Nader can find some external funding great... so long as it can do something genuinely useful for satellite users.

Among the present amateur radio satellite fans we should create a new club called "members for a positive action" as my previous Hamfest
story one individual cannot do much but it take.s only one other individual to achieved a mission. Is an ARISS contact in HZ can be a kind
of introduction letter? The ways and the means will always be a self marketer choice. I see Nader as an ingnator.

2489. OUFTI-1 DSTAR Cubesat

Yahoo group: eu-amsat
Date: 2009-05-11 08:47:15 UTC
From: Allan Copland
Topic: 2489 Message: 2489

More information at..
http://www.leodium.ulg.ac.be/cmsms/

2M up / 70Cms down bird carrying D-STAR.

"OUFTI-1 will use the amateur radio communication bands (145 MHz for the uplink and 435 MHz for the downlink). The primary communication system relies on the D-STAR protocol. In the event the D-STAR system fails, the reliable telegraphy beacon should still be operational, in which case any ham-radio operator anywhere in the world will be able to listen to the beacon telemetry, and send it over to us."

Due for launch late 2009 on ESA VEGA small launcher.

Hello Al,
I was attempting to send this to the OUFTI folks but couldn't find
a return address.
.....

To whom it may concern,
I enjoyed reading the information about OUFTI-1
but should point out an error in your Web page FAQ.

>OUFTI-1 will be the first satellite to test the use
>of the D-STAR communication protocol in space.

The D-Star protocol was tested successfully on the AO-27 satellite quite
some time ago - (see the AO-27 home page).

Hello All

D-Star on a satellite is new and interesting. Its digital as 9k6
Packet Radio is but with voice. But on a CubeSat without sufficing
power budget ? Hmm... I have my doubts.

Very true John, but AO27 was operating as an analogue repeater whereas OUFTI-1 will most likely operate as a pukka D-STAR repeater.

I do remember experiments being done some time ago in a similar manner to determine if TCP/IP Internetworking protocol could be used in a ground-space-ground based system using an amateur bird (can't remember which one). It worked... sort of, but at the end of the day, it was still digital over analogue link.

The point I'm making is that there's a difference between transponding an accurate analogue copy of a digital signal and actively regenerating and re-framing the signal data for transmission. A real D-Star repeater does more than retransmit what it hears.

I notice that quite a few early users of D-STAR in this area have sold up and gone back to plain old analogue radio, but maybe there is a niche for it on some satellites. Time will tell.

Yes Thomas, I would agree that power (or the lack of) is likely to be an issue. A single CUBESAT cannot generate much power, only a few watts (maximum) so it's difficult to imagine how any more than short bursts of communication will be possible. I don't see any advantage in flying D-STAR over analogue, but fortunately it's not my money thats being spent :-)

Hello Al and group,
Well, I'm still 'messing about' with the IC-E92D and
D-Star.

A couple of 'OBSERVATIONS' so far ...

Here in NOG (Norway) D-Star is generating the same discussion level as
that old evergreen - Is Echolink really 'radio' ... or is it not ??.

Why are other manufacturers *NOT* producing D-Star systems? ... yes,
I know !!! it's 'supposed' to be an open protocol but Kenwood and Yaesu
may be loathe to impliment a competitor's protocol - (or maybe not).

If I'm to fill in the 4 callsigns, mycall, yourcall, RPT1 (the repeater I'm using)
and RPT2 (the repeater the other station is using) with either the suffix A
(for 1.2G), B (for 70cms), or C (for 2m) to get around the world with D-Star
... why on earth! wouldn't I do essentially the same thing with the analogue Echolink? ...

One argument on the positive side is bandwidth. 6.25 digital as opposed
to 25Khz analogue ... for the same integrity of signal.

(... err, I suppose I could always use the IC-E92D as an analogue rig and
use FM on ZOOSAT - aka AO-51).

Like Buddy Holly sang ... That'll Be The Day ... (remember that one Al?).

I 'have' registered that some people have been disappointed with D-Star
but I can't help wondering if it's because it's relatively 'new'.

I'm old enough to remember the hue and cry when SSB was introduced, in fact,
I was at the research and developement centre at Porton Down at the time ...
(they were playing with 'nasty' substances to put in the drinking water, classified,
I'm afraid) - while we were 'testing' radio gear.

The same arguments were 'launched' ... this new-fangled SSB will never !!!
catch on ... err, it did.

Time will tell if 'digital' radio takes off.

It should be noted that 'digital' radio (read: packet) kept amateur radio 'alive'
through the late 80's and early 90's until the Internet became popular.

Power, hrm, interesting, I was labouring under the dilusion that a digital
signal used *LESS* power than an analogue signal ??? ...

The PE1RAH single cubesat size Picoponder runs on 3.5v so I wonder if power
really is an issue ???.

Food for thought?.

Comments folks ??.

In our discussions I read always the description "analogue". This
description means in our communinity mostly "voice", but it is simply
wrong. If you convert your voice into bits and bytes and back to
hearable voice, this is NOT analogue, this is digital/DSP.

Since a few years our terrestrial television is also digital in DVB-T
and not analogue. The analogue TV was shut down.

QSL Thomas,
I agree with your comments.

I purposely worded my mail as I did in the hope of creating a discussion.

Norway went over to digital TV just this year. They're *NOT* known for
leading the pack, more as 'fence-sitters' - (waiting to see what everybody
else does first, thereby avoiding common mistakes?).

Sensible to a degree perhaps- but it doesn't get you many 'innovation' points.

Personally, I believe you can't !!! turn back the clock ... so digital radio is here
to stay, like it or not.

My 41 year old first and second loves are in fact both digital ... CW and RTTY.

73 John.

Hi Group.

Kiwisat, a long running attempt by New Zealand amateurs to build the country's first amateur satellite seems to be making some progrwss. KIWISAT is a MICROSAT and should carry both Linear and FM transponders.

Linear uplink on 1268.880 to 1268.850 (Inverting) and 435.260 MHz to 435.230 (Inverting) with downlink on 145.850 MHz to 145.880 MHz @ 2W PEP.

FM uplink on 435.245 MHz and 1268.865 MHz with downlink on 145.865 MHz @ 1watt.

Three beacons are planned
Beacon 1:CW Beacon on Linear Transponder:Frequency: 145.885 MHz@50mw
Beacon 2 (Data Beacon):145.865 MHz@1 Watt B/W 20Khz 9k6 G3RUH or 1200bauds AFSK AX25
Beacon 3 (UHF Beacon):437.425 MHZ, B/W 20 KHz, 9K6data (G3RUH Packet)@100 mW

http://kiwisat.org/index.html
http://kiwisat.org/status.html
http://kiwisat.org/media/fred_dec06.html

Cutting metal for the microsat trays may be underway now, after the purchase of aluminium material for the spaceframe.

AMSAT ZL hope to secure a launch on the Russian DNEPR (converted SS-18 / R-36 ICBM).

At a lesser degree it remembers me the AM to SSB era and the 2 meters simplex to repeater period. Some "even" today argue they where able
to do the same coverage than the first repeater has. Read they where useless...and they cost money.

Same with DSTAR for some it's an useless mode and it's cost money. History will tell us if this mode will be the "NEW" mode of the early
21st century.

Hi Luc and the Group. I believe the main objection by some people to D-STAR is not that it's new or it's 'digital', but simply that it's reliant on a closed-source proprietary CODEC, so anyone who uses D-STAR can only obtain the CODEC from a single vendor.
I'm not sure that D-STAR will be anything like as popular as many other data modes for two reasons. #1 the proprietary CODEC (against the amateur spirit), #2 it doesn't actually appear to work very well in many situations. D-STAR like other digital systems requires a certain minimum signal level and doesn't cope well with multipath. I wonder how it will do with doppler shift?
As Luc says.... time will tell.

At a lesser degree it remembers me the AM to SSB era and the 2 meters simplex to repeater period. Some "even" today argue they where able

to do the same coverage than the first repeater has. Read they where useless...and they cost money.

Same with DSTAR for some it's an useless mode and it's cost money. History will tell us if this mode will be the "NEW" mode of the early

21st century.

Hi Nader

We have one bi-mode repeater here and analog and DSTAR can be transmitted through the repeater. When someone ask to QSY in DSTAR i can tell
you some are a bit frustrated to not been able to listen the QSO. As you said it is really cipher as what we hear is like white noise as if
your receiver was running with the squelch open. To avoid that a CTCSS tone take care of this problem for the non DSTAR users.

We have a Quebec DSTAR network here and the "control station" was in Yanji China
http://web.me.com/sylvain_stlouis/reseau_va2aka/accueil.html

It is always a thrill to be able to speak with someone who's in China when you are mobile in your car. We have here some OM who's quitting
the air for the internet couple of years ago with this new technology some are starting to look back at the RF side of amateur radio. Is
DSTAR can bring back those who leave for internet?

Since 3 months now nearly all the TV station south of the border are all transmitting on digital and they all cancelled their analog TV
signal making all the standard analog TV receiver useless unless you have a converter +-50$.

Things are changing that's why we will have a DSTAR conference at our Hamfest here on May 24 at 0930am if some of you are just passing by
here on a sunday drive...you are invited.

Hi Al and the group,
In addition to the information you provided re KiwiSAT, the latest AMSAT-ZL newsletter with enclosed KiwiSAT abstract states the following:

1) The transmitter tray is complete and fully machined
2) The BCR, IHU, and battery trays are machined to within 3mm of final dimensions, and are expected to be in a finished state by mid June.
3) Present planning is to have a "FlatSat" sometime this month, with details of the launch vehicle interface being finalised at present.Once the trays are finished machined, final assembly can be commenced.
4) There are links to YouTube of the tray machining available from www.kiwisat.org.nz
5) Major fund raising will be required for the launch program, and there is a PayPal link on the website www.kiwisat.org.nz where any interested people can make a donation.

Hope this additional information is of use to you all

regards and 73,
James - ZL4JM

2506. advice and what am i doing wrong?

Yahoo group: eu-amsat
Date: 2009-05-16 20:11:27 UTC
From: blairs_viper2008
Topic: 2506 Message: 2506

I used to use the old Russian sats 2m up/HF down, now i don't

I am very interested in wanting to use the VHF/UHF sats, so far with no success at all!

I have been trying for sometime now, as a starting point, to HEAR ao51 on 70cms on a handheld 1/4 wave, I am told it can be done? I tune into the right frequency, at the right time of day or night and i hear NOTHING. I have tried making allowances for Doppler shift, I know the bird is up there, I have checked who has heard it, but I get the feeling that not many stations in the UK Do actually hear ao51. What am I doing wrong?

On a slightly different subject.
I have a very good kenwood tmd700 which i want to use work ao51 and other sats mobile, listen to its beacon, listen on 9600 aprs etc etc. I need to know what is the best cheapest setup antenna wise to listen to the 2m/70cm birds using mobile antenna/s?

Hello and welcome Patrick

If you experiment with antennas, you do nothing wrong. I shall not say
use this or those antenna. If you find one which works: -> "WOW! BINGO!" :-)

go to ,,files" directory and you will find very good antennas, documentation also on variouse homepages like Ivo for example http://www.hamradio.selfip.com/i6ibe/

the most important is polarization.
have fun

Hi Patrick (and the group).

I fear you have been spoilt by the superior utility of the RS-Birds with their linear transponders and incredibly sensitive receivers.

For any type of satellite operation, it obviously makes sense to pay special attention to your receive system. AO51 is not my thing, but I'd suggest that you use a far better aerial ('antenna' for the yanks!) than a quarter-wave whip. Perhaps something like a modest hand-held dual-band yagi. If you are a 'handy' sort, I'd advise you to make a pair of modest (linear) beams for AO51.
If you want to *buy* a dualband aerial, the "Arrow Antenna' has it's followers but it's quite a modest thing. You could easily 'knock together' a better system with some ally tube, a junior hacksaw and a tape measure :-)

Polarisation... well, CP is CP only down the antenna boresight. Roll that around in your brain for a bit and it should very swiftly become obvious that the signal as seen on the ground,wont be CP (or anything like CP) for the vast majority of the time. If you see someone using an Arrow aerial will be doing a strange little dance (The 'Arrow' dance)... chasing the polarisation changes.

So to recap. Improve your receive system. Worry about polarisation (if you are the worrying sort) later.

You could do worse than this...
http://www.observations.biz/K5OE/70cms_quagi.htm

Finally, D Carr runs a satellite feedback page for users thats generally a lot more up-to-date than the AMSAT-NA one.
It can be found at..

Hello Patrick

What kind of car do you have ? On a Pickup you can mount a tripod with a 12V rotator and yagis. Such a tripod you can also put up beside your car, if you find a big parking lot.

Now a question from me apropos antenna/aerial: What is the correct British spelling: Rotor or Rotator ?

Thanx for the advice so far, but I think I am being misunderstood.

What I am referring to is actual antennas mounted on a car, like a 1/4 wave. 5/8 wave, etc.

Randy (k7age) suggested a 1/4 wave on 2m, and a 1/4 wave on uhf, due to their high angles of radiation.

I think a combined dual band antenna is not good, due to its low angle of radiation. I am not talking about the arrow antenna on a car! or a roadside yagi run from the car, I mean ACTUAL antennas ON the car.

patrick

Hello Patrick

Yes Randy suggestion is ok especially at crowded area like UAS or Europe .
I tried this setup on my home roof but the result was so poor! Here(Africa) I need a Yagi to catch Europe and Asia. Try those 1/4 vertical antennas on FM birds , we really appreciate your feedback Partrick.

2516. After playtime ...

Yahoo group: eu-amsat
Date: 2009-05-18 11:20:10 UTC
From: John Hackett
Topic: 2516 Message: 2516

Hello Al,
I've now had a play with D-Star ... using D-PRS, D-TV (your countrymen, no less) with digital SSTV, Asterisk (IRLP software), RtpDir, Dchat, D-rats, and D-Star Comms.

My conclusions are thus ...

(I MUST UNDERLINE THAT THIS IS ONLY MY PERSONAL OPINION).

I've found the biggest advantage to be ... the amount of data transferable in a dire emergency when all other systems are down - over an analogue system ... but !!!, at a price - (literally).

Nobody (and that's most of us) who isn't in range of a dedicated D-Star repeater can join the network without purchasing a DV dongle that cost's about as much as the D-Star radio itself.

That in itself leaves a rather large questionmark hovering over the emergency communications 'advantage'.

I have a sneaking suspicion that D-Star will go the same was as Kenwood's video rig in the 90's (which I also had, but had to sell, due to lack of popularity/use).

My opinion is, D-Star is a *VERY* expensive way of doing digitally what you can do *FREE* using an analogue system ... with for example Skype, Echolink and MixW ... (or MMSSTV if you will).

Others have noted the (partly) closed source system being against the Ham spirit. That's a good point but my comments are aimed at the 'ordinary' Ham, as opposed to the computer whiz kids.

I believe D-Star will remain a *special interest* mode.

> I believe D-Star will remain a *special interest* mode.

I agree cost is a drawback to D-STAR but in time costs will come down, however, there is another drawback - the bandwidth requirements of D-STAR - 12.5 kHz channel spacing.

Both ICOM and Kenwood market commercial VHF/UHF equipment under the NXDN trademark. These rigs are designed for 6.25 kHz channel spacing unlike the 12.5 kHz spacing used for D-STAR. NXDN uses the same Digital Standard that is specified for Digital PMR-446.
http://www.southgatearc.org/news/october2008/pmr_digital_voice.htm
http://www.southgatearc.org/news/november2008/gadget_show_radio_tests.htm

Given commercial adoption of 6.25 kHz channels I think Amateurs will in time go the same route.

The challenge to Amateurs is how to use this modulation through the satellites. Sat users typically start off by tuning SSB signals by hand. You can still understand SSB even if you're a few hundred Hz off tune but some current digital voice decoders aren't so forgiving of frequency mismatch.

2518. Trafic jam in space

Yahoo group: eu-amsat
Date: 2009-05-19 01:44:45 UTC
From: Luc Leblanc
Topic: 2518 Message: 2518

Even NASA is feeling the heat of our week days commuter traffic jam see below

Posted by RCC on 2009-05-18 at 16:00:39 EDT
The launch team received permission today to proceed towards the launch attempt of the TacSat-3 mission on May 19. The launch window is
7:35 to 11:30 p.m. Today's afternoon forecast shows a 90% probability of acceptable weather for launch. There is one issue that we are
following. There is a possibility of a conflict with the air space we need for the launch. If there is a conflict, we will move the launch
to Wednesday, May 20. We should know the status of this issue early Tuesday morning.

P.S. Why they don't disclose who is jamming the space??? another unsolved mysteries!

It's not the main issue with DSTAR

>
> I believe D-Star will remain a *special interest* mode.

I just copy paste KB9MWR top web page box contents:

"Advancing Ham Radio.. different ideas

Experimentation seems lost in the hobby. This is my attempt to spread some new ideas and help
enable those who want to explore something new.."

That's what's i think will be the "new" incentive for those who want to "experiment" We just get funding here at our local ham club to buy
a VHF DSTAR system with a controller. It's a step towards trying to put soething new in the experimenting field of our activities. As i
said in one of our club meeting i prefer to say in a couple of years from now in the event of a complete demise of amateur radio that we at
least we try all what we can instead of expressing regrets about something that we don't try.

2520. D-Star satellite.

Yahoo group: eu-amsat
Date: 2009-05-19 07:25:34 UTC
From: John Hackett
Topic: 2520 Message: 2520

Interesting point Trevor,
You said ...

The challenge to Amateurs is how to use this modulation through the satellites. Sat users typically start off by tuning SSB signals by hand. You can still understand SSB even if you're a few hundred Hz off tune but some current digital voice decoders aren't so forgiving of frequency mismatch.
.....
.....

I'm wondering how we're going to tackle the doppler problem on the proposed OUFTI dedicated D-Star satellite in LEO.

<http://www.leodium.ulg.ac.be/cmsms/index.php?page=in-english>

I think an automatic tracking system is going to have to be *VERY* !!!! precise.

I'm reminded of one of James Miller's quips in the 90's.

"An xxxx rotor 'rattles' more than that"

Waving a pointy stick at the sky (Arrow) and muttering 'Abracadabra' into a handheld just isn't going to cut it.

It seems to be the trend nowadays ... new sat - new rig, new computer.

Yup folks,
I'm aware of the D-Star developements. Perhaps I should have
mentioned that I'd played with some of this gear. I still maintain you can do
it for *FREE* with current analogue systems ... for as long as they're with us.

For those that are inclined ... download some of this software and play.

(You don't need a dedicated D-Star rig).

I was wondering that as well. The very low orbit means they'll be very high doppler on the downlink.

D-Star will tolerate up to about 1.5 kHz of tuning mismatch but current commercial D-Star rigs will only tune in 5 kHz steps. So I'd imagine receiving a complete pass using off-the-shelf equipment will be impossible. However, something like an IC-910 with an external D-Star demodulator board should work okay.

You never know it might encourage ICOM to add 500 Hz tuning steps to their D-Star rigs.

Of course at its Apogee of 1447 km the doppler shift won't be as bad as at the Perigee (354 km) but even so there are still going to be parts of a pass when 5 kHz rigs just aren't going to be able to tune close enough.

2525. D-Star solution

Yahoo group: eu-amsat
Date: 2009-05-19 18:44:56 UTC
From: John Hackett
Topic: 2520 Message: 2525

Trevor,
Another solution would be to use the D-Star HOT_SPOT software ...

<http://tech.groups.yahoo.com/group/rtpDir/files/D-STAR%20Hot-Point/>

combined with a home brew GMSK smart modem this system will allow analogue
rigs that can tune in 100 hertz increments to operate with the D-Star protocol.

However ... that brings us back to my original concern re: cost.

A 'commercial' way of acheaving the same goal is to use a DV Dongle which is *EXPENSIVE*.
Even the board and processors for the home brew version cost
a fortune ... and how many Hams are capable of soldering 80 pin microprocessors?.

That's why I used the words 'specialist mode'.

It will be interesting to see if there's any more innovation around the corner.

I assume the OUFTI people HAVE considered the doppler problem?.

I will *NOT* be surprised if they havn't. Your point re: orbital height is of course
a key factor. Perhaps someone should ask them ... then if it has *NOT* been researched
adequately, there's a chance for radio anateurs to shine.

Hello John and group

If it is possible to write software for 9k6 Packet Radio on the soundcard, it should be also possible to write one for D-Star on the soundcard. Except the D-Star-code is not open-source.

Thomas,
All files can be downloaded from the link I posted.

The big stumbling block is the 'modem'.

<http://kb9mwr.blogspot.com/2009/01/satoshi-7m3tjzs-d-star-node-and-dv.html>

I see you've discovered what I referred to as 'not' open source - not exactly in the amateur spirit.

Thanks John

I found this site for an example:
http://kb9mwr.blogspot.com/2008/11/over-air-d-star-to-asterisk-not-far-off.html

You need always such a DV-Dongle. A reseller in Germany wants 219 Euro for it. Only to operate via OUFTI this costs too much. If you want to operate with D-Star anyway and you don't want to buy a new TRX again then its ok.

2530. D-Star solution ... maybe!

Yahoo group: eu-amsat
Date: 2009-05-20 11:18:24 UTC
From: John Hackett
Topic: 2520 Message: 2530

Hello Thomas,
Yes, that's the conclusion I came to.

I have an IC-E92D but I'm 500 kilometers from the only D-Star repeater in Norway ... there are 2 in fact, but only one is connected to the international network.

There's no way !!! I'm going to pay 2800 kroner for a DV dongle - (Wimo).

I'll stick to CW for my 'digital' excursions.

That being said, the E92D is an excellent piece of gear, such a shame Icom chose to shoot themselves in the foot with the D-Star protocol. Had it truly been open source - so that amateurs could experiment and impliment alternative modem solutions, I'm sure Icom would have DOUBLED the sales of their 'digital' rigs overnight.

Keeping it to the 'select few' was/is IMHO short sighted.

rtpDir@yahoogroups.com

A few users that use satosit boards or other types of

hardware/software have been denied D-STAR access over IP.

If this still happening to anyone, you can file this

complaint with the FCC.

E-mail the following to the FCC,

Use your name and FCC callsign at the beginning and at the end

of this letter.

==========

To: fccham@...

From: <Your First Name, Last Name>, <Your FCC callsign>

Dear Sir/Mam,

I wish to file a complain that my access to the D-Star Amateur

Radio Service has been obstructed by Robin Cutshaw: AA4RC.

AA4RC Amateur Radio Operator has blocked my access to the

D-Star network.

AA4RC has blocked my FCC callsign, device and IP adress

from access to the whole D-STAR system.

I have always connected to the system in the past using

proper Amateur radio identification and protocol,

and have not introduced any forbidden connection

or behaviour to the system.

So, AA4RC is in control of the whole D-STAR network all

over the world and I can not connect to any D-STAR repeater

anywhere in the whole world.

I find it unbelievable that one person like AA4RC can control

all the D-STAR Amateur radio repeaters in the US and the rest of the

world.

AA4RC has installed his own program on all the D-STAR repeaters

in the world and because of this, he has blocked my access

to all D-STAR repeaters because he has copied my callsign

to all D-STAR repeater databases around the world.

He is even in control of my local ham club D-STAR repeaters.

I have corrected all and any problems with my radio

but he continues to deny me access to all the D-STAR repeater installations.

I would like to file a formal complaint against AA4RC

for interfering with my rights as an Amateur operator.

Please, notify me as to what action the FCC will

be considering against AA4RC.

Yours sincerely

<Your First Name, Last Name>

<Your FCC callsign>

From: Thomas Frey
Topic: 2532 Message: 2532

Hello All

I collect regular data from IARU Amateur Satellite Frequency Coordination
to compile my satellite list at
http://www.amsat-dl.org//index.php?option=com_content&task=view&id=46&Itemid=102

About SSETI ESEO you can read now:

"Previously planned for a 7 degree inclination GTO with a launch from
Kourou in late 2008. The project has now been respecified for a low
earth, sun syncronous orbit at around 600-800km altitude."
(http://www.amsat.org.uk/iaru/informal_detail.asp?serial=82)

The previous text was:

"The ESA sponsored, SSETI ESEO mission, is planned for a 7 degree
inclination GTO with a launch from Kourou in late 2008. A 120kg
satellite of similar construction to SSETI Express, it will employ
deployable solar arrays and incorporate cold gas jets for attitude
control."

I think this are bad news for a satellite with S-Mode and 5 GHz
downlink.

2537. Correct reporting?.

Yahoo group: eu-amsat
Date: 2009-05-24 19:30:40 UTC
From: John Hackett
Topic: 2537 Message: 2537

I was somewhat intrigued by the ON station's report on the Amsat-bb this afternoon (Sunday) about working AO-51 at 17:40.

The gist of the message was ... "I had a nice QSO on AO-51 at 17:30 so I guess the transponder is back on".

Two things peeked my curiosity, 1) the satellite was over New Zealand at 17:30 and 2) six (6) other stations reported the satellite as 'nothing head' on the D. Carr/ B. Bruninga website. The next pass was also reported as nothing heard.

This begs the questions 1) not using UTC? ... incorrect reporting? ... a very, very *VERY* !!! large array? ... (I've operated Europe-New Zealand on AO-13 but on AO-51? it's a bit of a stretch, to say the least.

My point? - when I look at the page to determine the state of a satellite at any given time it makes life a bit difficult with conflicting reports.

This happens frequently and people reporting working a satellite when it's switched off just confuses the issue even more.

Surely it's not too much trouble to check your log entry and r-enter it if it's incorrect.

I remember when I used to edit the AO-7 Resource Page Log, accumulated errors over time threw the log off by quite a bit - thereby defeating the object of the exercise of having the log ... (it was NEVER meant as a 'points table').

The sometime ridiculous conflicting reports (almost always due to uncorrected sloppy entries) was why I eventually threw in the towel. It was j8ust to tome demanding to check what was correct and what was not.

Luckily, some of the entries were obviously false - and thereby easy to rectify.

I have no such association with the D.Carr site so the above is just my little quibble - no need to send an assasination squad.

Hi Thomas, Yes it was unfortunate the orbit was changed, it will certainly be challenging to receive the 5.84 GHz beacon in that orbit. There's a project update issued last December at http://www.uk.amsat.org/content/view/682/68/ It was also on Southgate at http://www.southgatearc.org/news/december2008/eseo_project_latest_news.htm BTW it's not just 2.4 and 5 GHz the update mentions the linear 435/145 transponder 73 Trevor M5AKA --- On Fri, 22/5/09, Thomas Frey wrote: From: Thomas Frey Subject: [eu-amsat] ESEO goes into LEO To: "EU-Amsat" Date: Friday, 22 May, 2009, 12:44 PM Hello All I collect regular data from IARU Amateur Satellite Frequency Coordination to compile my satellite list at http://www.amsat- dl.org//index. php?option= com_content& task=view& id=46&Itemid= 102 About SSETI ESEO you can read now: "Previously planned for a 7 degree inclination GTO with a launch from Kourou in late 2008. The project has now been respecified for a low earth, sun syncronous orbit at around 600-800km altitude." (http://www.amsat. org.uk/iaru/ informal_ detail.asp? serial=82) The previous text was: "The ESA sponsored, SSETI ESEO mission, is planned for a 7 degree inclination GTO with a launch from Kourou in late 2008. A 120kg satellite of similar construction to SSETI Express, it will employ deployable solar arrays and incorporate cold gas jets for attitude control." I think this are bad news for a satellite with S-Mode and 5 GHz downlink. Hello John,

I indeed had a contact on AO-51 on the 23th of this month at 17:46 UTC.
The bird was over Europe at that time and i made a contact with G1EFP.

The message came a day later on the amsat-bb. (I don't know what caused
the delay)
That's why you think i worked the bird at the 24th!

Since then i didn't hear anything from AO-51.

73,
Eric.

From: John Hackett
Topic: 2537 Message: 2540

Hello Eric,
Rgr on the delay from the Amsat-bb, yes, of course, that
explains it. I naturally assumed the contact was for Sunday since the
wording was 'today' when the message appeared on Sunday afternoon
(but was in fact posted on Saturday!).

The source of the confusion was the Amsat-bb delay and *NOT* !!! your
reporting.

Thank you for the message Eric, very much appreciated.

In view of what's is planned for the next P3E HEO i want to try some 10ghz band experiment

I got a local Hamfest a Hughes LNA P/N 1011836-0009 personal earth station. My first google search does not give any results nor a direct
call to Hughes company who even give less results...

This LNA has a N type connector on it marked IF a F connector marked LNC another F marked POINTING and on the side another F connector on
probably the LNA model PLV-810A. There is a rotary adjustable ring for vertical or horizonthal polarisation and a hand writing note
"10-15GHZ KU" the TX power is 1Watt.

If someone is aware ot the use of this PES or know where to get some manual it will help me to see if i can put this on the air?

You can see a similar unit on e-bay at
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&ssPageName=STRK:MEWAX:VRI&item=110395595319

Hello folks,
I remember these fantastic claims from my youth.

Here are a few comments from the other side of the coin.

One chooses what to believe based on the evidence presented.

There is no question that a 'sort-of' tracking station was set up but
I wouldn't give you a quid for every Db of gain claimed for the aerials
used ... not to speak of the fact that those aerials wouldn't be very
effective at all on the frequencies that were actually used.

You can easily estimate the size by comparison to a chimney stack,
roof slate or wallbrick.

Thanks for that link John. I'd not heard of the Judica-Cordiglia until I ran across the BBC programme.

The picture of the antenna certainly looks impressive.

As the website points out the "dish" doesn't do a great deal but then it may not be intended to. What I saw when I looked at the pictures is an antenna system that could be configured for different frequency bands, albeit slowly, with someone having to go up there, dismantle part of the antenna and put in a new set of elements.

To me the dish at the back looked as though it were part of a UHF (400 MHz) antenna system which the later pic of showing the helical might appear to confirm. So arguably when they wanted to receive VHF instead they simply removed the UHF helical and put some yagis there. No point in removing the dish as it doesn't adversly affect VHF performance.

Unfortunately the pics lack a timeframe, we do not know which antenna configuration was being used to receive which transmissions.

As far as frequencies mentioned are concerned, despite what the web site says 405 MHz certainly sounds plausable for space comms. To this day 406-406.1 is used by sats and I seem to recall that the lower part of 400 MHz was used by sats prior to it becoming a medical implant band.

The reference to 145.800 MHz is certainly interesting. It has only been used for ISS Amateur Satellite comms in this century, the earlier Shuttle Amateur Radio operations were I think around 145.840 MHz FM ?

As I recall the IARU approved the use of 145.800 MHz 5 kHz Deviation FM with doppler shift of +/- 2 kHz for future ISS operation around 1997 ?? and then subsequently approved the use of RV63 (145.7875 output) for FM repeaters across Europe. Two decisions that are not quite compatable but that's a different story.

As far as early Soviet space exploration is concerned I can see no reason why they wouldn't have used 145.8. Certainly at that time the UK used half a dozen frequencies in the 2 metre band for aeronautical purposes and the Soviets would certainly have been free to use whatever frequency suited their interests at the time.

Anyway I guess it's one of those things we'll never know for sure until the archives at the Kremlim are available for all to see which will probably be many decades from now.

I'm glad this one is billed as a drama and not a true account.
I've had a lifelong interest in the Russian Space program and this story has surfaced many times over the years . It's all rather akin to the 'faked moon landings' stuff we hear so often.

LA2QAA has already commented on the radio aerials used so I won't elaborate on that I'd respectfully suggest that reading general Kamanin's diaries would be infinitely more enlightening than watching the BBC's forthcoming 'Drama'.

http://www.astronautix.com/articles/kamaries.htm

For those not familiar with the General, he provides the only really detailed information on much of what went on 'behind the curtain' in the Russian Space program during the cold war days.

Of course one should not overlook the superb detective work done by the Kettering Group, headed by Geoff Perry and the work of Sven Grahn (also of the Kettering Group) and others.

Sven's Site is at http://www.svengrahn.pp.se/

I'd suggest you make up your own mind to sort out the wheat from the chaff, but I would point out that there is plenty of evidence to suggest that these brothers were charlatans. Still, a good story will always 'sell'.

Hi Group.

I found this interesting message on the AMSAT-BB today.
If nothing else, it demonstrates that QRP SSB satellite contacts are entirely possible, even on a bird (launched November 15, 1974) with shot batteries and virtually no power available from it's radiation-damaged 33+ year old solar panels.

If anyone in the group needs convincing, this experiment by Tim really does adequately demonstrate that 'less is more' when it comes to the Analogue birds. A-O-7 has a {very} sensitive receive system that seems to be working as well as ever it did.

Good on yer, Tim, and A-O-7!

Content-Type: text/plain

Hey everyone,

My thanks to K8YSE, who heard my faint CQ on AO-7 at 13:16 UTC this morning and called me. We had a contact
that lasted about a minute with a few exchanges, which is really a thrill here because I was transmitting a half-watt out on a Yaesu FT-817ND.

As I suspected from the "test run" the other night, my setup here requires that AO-7 reach roughly 50 degrees elevation before I can hear myself at all on this lowest-of-all power settings for my SSB/CW satellite station.
I also suspect I can lower that elevation some by working CW instead of SSB, and I intend to find out on the next really high pass over me.

Thanks, too, to Rick, WA4NVM, Pete, WB2OQQ, and others who were listening for me on the pass. By and large, the AMSAT community comprises wonderful folks who are always willing and enthusiastic to help out whenever I get a wild hair to try something on the satellites. I appreciate all of you very much.

73 to all,

Tim - N3TL

Hello Nader,
Much depends on what is happening (or not!) on the satellite
scene at the time.

Check the archives (at the bottom of the main page) and see how those tally
against what was debated and what 'satellite' activity there was in those months.

Also ... at this time of year many people take a holiday.

The activity swings up and down, 6 messages in June 2007, 64 in 2008.

Hello Nader,

perhaps you can activate more stations from africa to be QRV via SAT, then the eclipse here in the board and on the SATs will be over ;-).

I think you and TR8CA (I hope the call is correct) are the only "exotic" stations which are regularly QRV.

2556. Webcast of L'Aquila Amateur Radio Space Station contact 07:52 BST

Yahoo group: eu-amsat
Date: 2009-06-10 19:59:15 UTC
From: Trevor .
Topic: 2556 Message: 2556

On Friday June 12 at 06:52 UT / 07:52 BST / 08:52 CET astronaut Frank De Winne ON1DWN, one of the five Radio Amateurs onboard the International Space Station (ISS), will talk to students at "A.Bafile" college in L'Aquila, Italy using Amateur Radio on 145.800 MHz FM.

As you may be aware on April 6 L'Aquila and its schools suffered a devastating earthquake, reaching 6.7 on the Richter scale.

The quake killed about 300 people, with at least 70,000 left homeless. Liceo Scientifico "A. Bafile" is currently operating under a school-tent at "Colle Sapone" site, together with other secondary schools of L'Aquila. Currently more than 500 students, aged 13 to 18, are attending courses under tents provided by the Italian Ministry of Education (MIUR) and by the Civil Defense (DPC).

Frank ON1DWN will be transmitting from the Amateur Radio station on the ISS using 145.800 MHz FM. It should be receivable in the British Isles and Europe using a handheld 2 metre FM radio and a 1/4 wave whip antenna.

The contact will also be webcast at:

http://www.livestream.com/isscontact/

Related info:

Two ARISS contacts planned for astronaut Frank De Winne ON1DWN on Friday

Hi folks,

I arrived here in Bratislava last week and will stay for 6 weeks. I've already met some of you on the birds and hope to work everyone. I'm using a Yaesu FT-60R HT with the Arrow antenna. I may also try to work the linear sats in half-duplex mode later this month with my IC-7000.

My grid locator is JN88mf. My logging is not 100% accurate so please email or send eQSL to be sure you are in the log.

Nader,
A couple of years ago I discovered the anomoly of the 24 hour timer.

<http://www.observations.biz/interesting_websites/ao7_southgatearc.htm>

As I have previously mentioned (several times) the timer is *NOT* as decribed in the 1974 Amsat newsletter. Changes were made just prior to launch. After e-mail confirmation by Jan King (the AO-7 spacecraft designer) GM1SXX and myself managed to figure out the anomolies.

I described this in several articles. A Google search for AO-7's 24 hour timer ought to turn up something. If I recall correctly, it's also mention in Observations from Norway, Observations from Scotland and several åpost to this reflector as well as the Amsat-bb.

I can't remember the date though, it's a while back now.

(Google is your friend.....GM1SXX).

Be aware that the CW beacon is sending 'rubbish' - you'll find out why in some of the artcles.

Thomas is right - it's due to the illumination percentage of the sun panels and consequently the threshold of the circuitry.

Hope that helps.

73 John. <la2qaa@...>.

Topic: 2563 Message: 2563

Nader,
Here's a backlog of some of the previous AO-7 beacon information.

<http://www.ne.jp/asahi/hamradio/je9pel/ao7cwtlm.htm>

Be aware that the parameters for channel 6 *must* be 649, 650 or 651 ...
anything other and the beacon will be sending random characters due to the
voltage being too low.

I monitored this daily for more than 12 month period.

I did *NOT* keep the data since it was invalid.

You may recall I mentioned to you quite a long time ago that the beacon
telemetry was only to be trusted in cetain circumstances.

GM1SXX and myself were in contact with Jan King while we were performing
these tests. Al may still have the texts - or they may even be on the
OBSERVATIONS website.

In either case, an e-mail to Al would confirm that, - jay or nay ... (Al does
all the actual work on the website - I just sit back and take the credit for it).

2564. FM satellites.

Yahoo group: eu-amsat
Date: 2009-06-14 12:26:36 UTC
From: John Hackett
Topic: 2564 Message: 2564

Hello Folks,
Being Sunday, it's time for a 'waffle'.

Tackling the 'zoo' on AO-51 (and to a lesser extent) SO-50, for the newcomer can be quite a daunting experience. One could say it's like p*ssing in the wind - but it's up to the experienced operator to try to guide/teach the potential newcomer.

The following operating notes from Tony VK3JED from 1999 are still relavant today.

Paricularly the line ... "if you only want to hear your own voice, buy a tape recorder!".

73 John. <la2qaa@amsat.org>

.....

Operating procedures for FM satellites.

Most material I've seen on satellite operation deals with linear transponders. While these procedures are mostly good operating habits and common sense, they do not specifically emphasise the key constraints placed upon the FM transponders, namely limited QSO throughput due to single channel operation, and higher levels of demand. As a result, any operating procedures must address these issues and ensure as many people as possible can make contacts during the pass. My suggestions are drawn from a combination of FM repeater procedures, contesting and traditional satellite operation, as elements of each of these facets are incorporated into FM satellite operation. I'll summarise my procedures below:

1. First and foremost is to listen before and while (if possible) transmitting, to ensure your transmissions don't drown out a weaker station who may be on the edge of a pass or running QRP. Satellites should be an alligator free zone. It is strongly recommended that you set your station up so you can monitor the downlink while transmitting, so you can hear how well you are accessing the satellite and whether you accidentally clobbered someone else. Similarly, if you can't hear the transponder, don't transmit. Do something else more productive, such as realign your receiving antenna to improve reception.
2. Be brief. Because the traffic levels can be quite high, contest style (callsign/signal report/next station) operation is the most appropriate for most situations. Many stations also exchange QTH and first names, which is OK if time permits. If transponder activity is low, you can have a brief chat, but the opportunities for this are becoming rare now.
3. Take turns. If you've just worked a handful of stations, be polite and hand the transponder over to someone else so they can work a few. There may be an opportunity to call back in later during the pass and work some different stations as the satellite passes over different areas, and others will appreciate your courtesy.
4. When calling, a simple announcement (e.g. "This is VK3JED listening SUNSAT" or even "VK3JED listening") will suffice, like it does on a terrestrial repeater. Anyone within transponder range will hear your call. A short CQ call ("CQ SUNSAT, this is VK3JED") is OK too. Long CQ calls waste transponder time and frustrate everyone listening. Save the long CQs for HF, where they're appropriate. Only call CQ when there's a distinct lack of

activity, such as at the very start of a pass and sometimes late in the pass after everyone else has finished. A well placed CQ call late in a pass might alert someone ahead of the satellite that a pass has just commenced over their QTH.
5. Wait your turn. If a QSO is in progress, wait until it finishes before putting in your call. Butting in too soon is rude and wastes precious transponder time as the stations involved in the QSO have to repeat themselves due to your QRM.
6. Don't tune up! Believe it or not, there are stations who test their satellite access by dropping a carrier over the top of everyone and perhaps announcing "Hello hello". Simply putting out a call at the appropriate time will provide all the signal checks you need (and net you a worthwhile contact! :)), without annoying everyone else on the transponder. If you're really that doubtful about your equipment, perhaps connect your dummy load, test in the shack and try again another day, rather than disrupting everyone else. If you just want to hear your voice, well a tape recorder or a pair of walkie talkies will do just as well...
7. Reward good operation. If you're answering a call, why not reward the good operators and put the alligators last on your list of priorities. If all satellite users favour good operators, perhaps everyone will learn that good ops have the highest QSO rates and earn the most satellite awards. :-) Peer pressure is a powerful motivating force, as any teenager will know (but probably not admit to! :-)).
8. Use the minimum power necessary. While power levels are not critical on FM satellites (unlike linear transponders where an excessively strong signal can affect other QSOs on the transponder), using the minimum power necessary allows you to easier tell if you're 'doubling' with someone else. For the South African SUNSAT satellite, you shouldn't need more than 5 watts into a basic (1/2 wave handheld or turnstile) antenna, perhaps a bit more if the antenna is setup for terrestrial operation, to overcome radiation pattern limitations. As an example of good operation, recently one station who had multiple beams wound his power back to 20 mW. The signal into the bird was full quieting, but it was still possible to tell if someone else was underneath his signal. If he had run 100W, he couldn't have known if he'd stepped on anyone else, due to the capture effect of FM.

If everyone follows these simple guidelines (which are basically common sense and courtesy), then FM satellite operation can be enjoyable for everyone, regardless of whether you run a sophisticated satellite station or a couple of handhelds from the back yard. FM satellite transponders are like FM repeaters, only more extreme. On the positive side, they can enable minimally equipped stations thousands of kilometres apart to communicate with ease. On the other hand, the worst aspects of repeaters can be experienced as well, such as congestion, doubling and even the odd idiot dropping carriers! (I don't know how the idiots manage to always have a very strong signal, even when the repeater is 800 km off the ground!). The operators themselves (that's YOU!) have the power to determine what sort of experience FM satellite operation will be in the future.

A final note. I suggested that satellite operators listen to their downlink while transmitting for several reasons. Firstly, of course, to hear if you're accessing the satellite and that you're on frequency, and secondly to ensure you're not going over the top of someone else. Those who aspire to SSB satellite operation will need to be able to monitor signal so they can compensate for Doppler shift (which affects SSB much more severely than FM). To do this requires suitable equipment and a bit of skill. The equipment can be either a multi band transceiver with crossband duplex capabilities, such as some modern multiband rigs, or a pair of transceivers, one tuned to the uplink and one tuned to the downlink. You will also need headphones or an earpiece to avoid causing feedback when transmitting.

Hearing youself in your ears every time you transmit can be disconcerting at first, and being able to listen for heterodynes and general signal quality while talking can take a little practice. It's not difficult to learn, and practice is easy and shouldn't be intrusive on your normal operation. Some ways to practice self monitoring are:

* The simplest is to have a receiver tuned to your transmitting frequency. This will allow you to hear yourself. However, it doesn't allow you to montior other band activity while transmitting since your transmitted signal will overpower everyone else's.
* Alternatively, if you live close to a repeater that you use regularly (or have a set of cavities!), you can set the receiver to monitor the output of the repeater at all times. Whenever you transmit, you will hear yourself (provided desense from your transmitted signal doesn't wipe out the received signal) on the output, as well as any other QRM. This is a fairly accurate simulation of FM satellite operation, and the most recommended way to practice monitoring your own transmitted signal.
* Crossband duplex operation can also help one to practice listening while the button is down, though this is a bit more like a telephone than satellite operation.

Keep up the good habits and hope to hear you on the birds. 73 - VK3JED.

Topic: 2560 Message: 2565

Hi group.

Re John's posting about AO7's timer, I can tell more about what happened with AO7.

AO7 was intended to use a quartz crystal controlled mod-switching etimer but in those days Xtals were expensive and time was short, and rather than use a crystal oscillator (as shown in the schematics), Jan and Karl used a simple R/C oscillator instead, driving a first generation CMOS divider chain to provide the timed mode changeover. This information came direct from Jan King, chief designer of AO7, but we had to 'wring' it out of him :-)... remotely, by email. So although there are those who hang on every word that AMSAT says or publishes, sometimes the reality, for practical reasons, may actually be different. The documentations shows an Xtal timer. The satellite carries an RC one.

John discovered a long time ago that the timer on AO7 is not especially accurate, as you'd expect with a free-running oscillator that is to a degree temperature dependant. In fact it's quite inaccurate. That got us into talking with Jan, who let us in on the fact that no crystal timer flew on AO7. No self-respecting crystal oscillator would drift anything like as much as the clock on AO7, a fact that LA2QAA discovered by meticulous observation during full-sunlight periods. I have to admit that it was a damned clever bit of detective work on John's part. We *had* to hassle someone for why it was pretty inaccurate... and that led to lots of emails between here and Jan!

So, now you know. AO7's mode switching 'clock' is a simple RC oscillator that drifts a fair bit. It was deemed adequate for the job... and still it is, so long as you don't expect too much of it.

With no battery, the mode switching is erratic, because the timer always starts up as the bird leaves eclipse in an indeterminate state,and the only time it sort of behaves (sometimes!) is in full sunlight... but remember that the solar panels generate so little power, even in full sunlight, that nothing can be guaranteed.

Topic: 2566 Message: 2566

Hi

I just try AO-51 V/S mode this morning 0700am pass. I was checking a new S band beam and it was a success nearly all the fades disappear
comparing to my former WMAX beam. But i was not able to uplink to the satellite only to discover a frightening flaw in my setup i was
transmitting in the same VHF port that i used for my 2.4GHZ downconverter. Too early in the morning and probably not awaken enough i
immediately stopped transmitting and OH surprised the DC does not blow up?

But what about the 847 finals...they survive about 10 transmission... In the middle of the pass and the DC still working i cannot switch my
rig/antenna fast enough i take my HT DJ-580T with his rubber duck antenna and i punch the uplink frequency then and i called Doug KD8CAO
who was calling in the void since the beginning of the pass and at the same time i heard my downlink he answered me back...My Alinco was at
5W. But the amazing part "i was in my basement..." It is a living proof that the hard part is the receiving side. My last basement record
was on AO-16 50w on a dual band mobile antenna on a metal file cabinet.

P.S. i will buy a lotto ticket today i feel the stars where on my side this morning:)

Hello Al,
Oh whoa! is me - (sorry, just 'horsing' around) ... for I am undone.
(with due apology to William Shakespeare G.R.H.S.)

(GRHS = God rest his soul).

I entered the 'World's largest 70cm preamp' competition - but I didn't win.
(see attachment).

Maybe I should have put the 9v battery OUTSIDE !!! the preamp ... and
gone for the 'World's smallest', instead.

No, you *DON'T* need a resonant stripline and/or cavity for SO-50
(using the dreaded FM) - a 'noisy' 4dB MAR-3 will do in front of the
- (tendency toward stone deaf) - MYCOM scammer - (full duplex using
the IC-E92D for TX).

Remember !!! ... full duplex means - if you can already hear somebody
using the frequency, turn your power up to *MAXIMUM* and begin
'groaning' like a demented cow ... AWWWWWWWWWWWLLLLLLA ...
then when you're in full lung-stretching mode - quickly switch to CQ CQ
CQ CQ CQ CQ CQ CQ CQ CQ CQ CQ (endlessly) ... making sure you *ARE*
right on top of the other station with less power than yourself.

That's !!! the way to do it - money for nothing and your chicks for free.
(Mark Knopfler).

The emergency services *WILL* realise that this is just the kind of net
dicipline they need - it's EXCELLENT advertising for amateur radio.

... and Ladies & Gentlemen, before you reach for your flame throwers,
please 'do' read the title once more before you're tempted to point out
the error of my ways.

Hello again Al,
Hotmail (in it's wisdom) seems to have cut off half of the
pic I attached. It was a matchbox - to illustrate size (or rather, lack of)
compared to the preamp.

As you well know, a picture of a matchbox (for size comparison) is *HIGHLY*
suspect and dangerous - so Hotmail probably saved all our PC's from disaster.

Whad'ya mean! I'm already using an anti-virus program? ... you think Hotmail
bothers about a minor detail like that?.

Hello folks,
The D. Carr log at <http://oscar.dcarr.org/> is a useful tool for keeping tabs on the current status of the amateur satellites - for instance, it's quite easy to see, especially from the conflicting reports - exactly what is going on.

For instance, looking at attachment 1 it's logical to assume that the UY5UZ station, because he doesn't hear AO-51, reports the satellite as being OFF whereas Ib OZ1MY (part of the coordinating team) knows the mode has changed and reports the satellite as ON.

It only get confusing when the 'SAME' station (AD5VC) report the satellite as being both ON and OFF ... on the same orbit - SO-50 in this case ... (see attachement 2) - despite the clearly marked log facility for correcting reports made in error.

My apologies for the nitpicking but correct reports do help other operators whereas incorrect reports quite often serve to confuse.

73 John. <la2qaa@...>.

To know which mode is on, look always on
http://www.amsat.org/amsat-new/echo/CTNews.php first.

Sure, this works just fine till the bird crashes and nobody at HQ remembers to update the Echo News page, probably because they are running around trying to recover the satellite from a CPU crash :-)

IMHO the user reports are much more useful. I do remember several occasions in the past when according to AMSAT-NA the bird was reported as working OK but D Carr's pages showed it as off.... usually because of CPU crashes. Usually the AMSAT-BB is even more informative than the AMSAT Echo pages but the regular users and reporters to D Carr's page are better imformed still.

Hello Nader,
Yes, I prefer to address potential problerms with 'humour' ...
as opposed to getting irritated and upset - or flaming other people.

As to the preamp, actually it's about the size of your thumbnail (using SMD)
and I first built it, oh, I don't know, about 15 years ago.

It utilised a MAR-3 with 100p chips caps in and out and a 110 ohm bias
resistor with the 9v supply. The RF choke is 3 x 2.5mm I.D. turns of
enamelled copper wire close wound.

Decoupling is by 1n, 10n and 100n chip caps in parallel.

I was !!! aware of the fact that this preamp was a *NOISY* little beast
measuring 3.8dB at 435Mhz but for SO-50 it's perfectly adequate though
of course, I would recommend *NO* preamp - but more 'aluminium' - (aerial).

I would definately *NOT* recommend it in competition with a mast mounted
gaAsFET preamp mounted at the aerial - designed for a sky noise figure of
under 1dB.

Around 145Mhz the sky noise is about 2Db so an 0.5dB preamp is hardly worth
the effort at that frequency though at 23cm and above a low noise gaAsFET
IS worth the effort ... but I digress ...

I built the preamp *from my head' so there's no diagram, however, ON6MU
has a slightly more elaborate design at ...

<http://users.belgacom.net/hamradio/schemas/preamp_HF_VHF_UHF_SHF_wideband_MAR6.htm>

It crashes far more often than I'd expect :-) The AMSAT BB has given its past crashes plenty of mentions. Satellites relying on CPUs to control their actions are vulnerable to radiation hits, one reason why builders might wish to consider employing simpler systems. The move (over time) away from ground-based command and control to CPU based C&C doesn't seem to have made satellites any more reliable, although it has brought programmed mode switching and more detailed telemetry. 'Progress' has it's cost. Crashes are one of them. AO51 is far from being alone in this respect.

The effects of radiation on satellites can be reduced somewhat by using Rad-Hard parts (expensive). EDAC memory, and shielding, but cannot be eliminated. With Molniya orbit birds, you *need* a computer on board for attitude control and sun-pointing, but for a LEO, unless it supports many different transponder modes, I just can't see any real advantage in making it CPU dependent.
AO7 has no CPU (or functional battery for that matter) yet continues to work as well as could be reasonably expected. No CPU dependent amateur bird has come close in terms of longevity. I'm sure there's a lesson in there somewhere.

Hello Group.

More nitpicking re: the D.Carr log at <http://oscar.dcarr.org/>

AO-7.

ZS6WB reported the satellite in mode-A as N.H. (nothing heard) at 15:31
today - (2206091531Z)

Not really too much of a surprise since according t0 NOVA the satellite was
over the South Atlantic/Antarctic at the time.

IT IS NOT NECESSARY TO MAKE A REPORT IF YOU'RE *NOT* IN THE
CURRENT FOOTPRINT.

If you've made a report in error - please use the *CLEARLY MARKED* method
of correcting the error.

The station concerned reported the correct pass in mode-B at 16:00.
(2206091600Z).

We *All* make mistakes, not least La2qaa !!! ... (to err is human) ... but do
please try to correct he obvious ones.

Over grid FN26 there will be 6 available pass starting 0122 EDT on June 28 most of them will be on the night shift but some real good one
early morning the 28 until the last one 0919 EDT June 28

Just to remind that only ONE (1) satellite contact is required to have the ARRL100 satellite bonus points. Never heard if AMSAT-NA will
also have his satellite field day but it's not helping the ARRL Field Day as multiple QSO'S are allowed.on a very restricted satellite
aging fleet.

Not to mention there is about no rules who stands and it is not a friendly QRP area... The moto is the bigger and longer CQQQQQQQ EEEEER.
It will be interesting to have some negative points for poor operating practice? It's easy to spot and post but not too flattering for the
offending station.

Just to remind some offended virgin ARRL has his check log for numerous years and no one complains. (Those on the check log could be...)

Happy field day it will be a whole week end of rain and heavy thunderstorm here!

sent to amsat-bb as well

Hello AO-7 friends,

We make a short activity on 4.+5.07.2009 from a high mountain close to Athens. With that good take of, we try to make some DX via the old lady.
We will have some passes which covers the north-east of the USA and Canada, as well we have some good opportunities for VU, ZS and 5R. A real difficult area is Brasil. We have a extreme short window to Natal, HI24-square. Is there anyone out, who is able to work AO-7?? PY´s, please look for someone and give us a short info!!

In most of the directions we have the horizon at -1deg !! So stay tuned at 145.950MHz -+Doppler and QRM.

For further infos ask me: sx1dl@...

Hello folks,
Bad news re: the Sea Launch bankrupcy.

Looks like we'll have to start collecting knicker elastic again.

That's exactly the worse choice IMHO and it is exactly what our German friend choose to don't do. They remain focused on their target P3E
its the way to go but if AMSAT-NA want to go on the cubes side? It will at least not duplicate the resources. I am still in favour on an
international HEO joint venture it's the only logical way to go...

From my archives did any one get fresh news about this Chinease sat?

SB SAT @ AMSAT $ANS-279.02 October 4 2008
First Chinese Amateur Radio Satellite to be launched in June 2009

AMSAT News Service Bulletin 279.02
From AMSAT HQ SILVER SPRING, MD.
October 5, 2008
To All RADIO AMATEURS
BID: $ANS-279.02

Michael Chen, BD5RV/4, reports that he recently received an update from Alan, BA1DU, on the progress of the first Chinese amateur satellite. Things are now going smoothly. This satellite was formerly named CAS-1 and is now XW-1. It carries a beacon and three cross band transponders: FM, linear, and digital.

The satellite is planned to be launched into a Sun synchronous orbit in June 2009 by a CZ-2C rocket in Taiyuan Satellite Launch Center in North China.

[ANS thanks Michael, BD5RV/4, for the above information]

From: Allan Copland
Topic: 2595 Message: 2595

The satellite is planned to be launched in June 2009 by a CZ-2C rocket in Taiyuan Satellite Launch Center in North China.

Here are some details about upcoming Chinese XW-1:

Orbit: Sun Synchronous Orbit
Altitude: 499km
Inclination: 98 degrees
Period: 94 minutes

Weight: 35kg
Size: 550mm * 350mm
Temperature: -20 to +45C
Power: Li ion battery: 16Ah
Long-term maximum power: 8W
Short-term maximum power: 18W

Payload:
Amateur radio payload: 5.2kg
Youngster's experiment payload: 1.6kg
CMOS camera: 0.2kg

About amateur radio payload:
Beacon: 435Mhz, CW 20dBm
Linear transponder: RX: 145Mhz, TX: 435Mhz, 40KHz, 30dBm
FM Transponder: RX: 145Mhz, TX: 435Mhz, 16KHz, 30dBm
Digital store and forward transponder: RX: 145Mhz, TX: 435Mhz, 16KHz, 30dBm

145Mhz RX Antenna: 2dBi, 135 degree, LHCP, unpacked by remote control after entering the orbit.
435Mhz TX antenna: 2dBi, 135 degree, RHCP, unpacked by remote control after entering the orbit.

Forget the C-64 even if i still have their video monitor 1702 (one of the best one) there is a lot available for free that's one of the
things i want to tell you.

For the record there is about 6 VE2 stations heard since 2001 on the amateur satellites and there is room for a lot more even on the very
narrow bandwidth available in chunks on the amateur satellite fleet.

Hope to talk you in space soon.

2601. OPSEK

Yahoo group: eu-amsat
Date: 2009-07-04 18:25:54 UTC
From: John Hackett
Topic: 2601 Message: 2601

Hello Al,
You probably know about the OPSEK project which now seems
to be back on track thanks to a bettering economy and the Russian interest in
doing things their own way (a good thing, in my opinion) after the end of the
ISS sometime in the 2015 - 2020 timeframe.

If you're familiar with the details, hop over them and proceed to my comments
further down the page.
.....
.....
The OPSEK project

By
2008, the Russian successor to the International Space Station, ISS,
was identified as Orbitalniy Pilotiruemyi Eksperimentalniy Kompleks,
OPSEK, or Orbital Manned Assembly and Experiment Complex in English.*
Unlike previous designs of Mir, Mir-2 and the ISS,
the heart of the station would be a four-ton ball-shaped node module.
Equipped with six docking ports, this relatively small and simple
element would be the only permanent element of the station. All other
modules would come and go as their lifespan and mission requires.

The initial architecture of the OPSEK complex could be built out of modules originally
planned for the Russian segment
of the ISS. The exact scenario of the OPSEK assembly would depend on
the end of the ISS and the readiness of the latest Russian modules.
According to a 2008 scenario, the MLM multipurpose module, the node module and a pair of
NEM power platforms could be first launched to the ISS in 2011, 2013 and 2014-2015,
respectively. With the deorbiting of the ISS looming around 2020, these
modules could separate from the old outpost to form the core of the new
Russian station. Another, more controversial scenario considered the
separation of the practically entire Russian segment, including the MIM-2 docking
compartment and the Zvezda service module,
prior to the ISS deorbiting. In this case, the 20-year-old service
module would temporarily take a responsibility for the flight control
of the OPSEK, until its replacement with a 40-ton versatile core
module, UMB, launched by a next-generation rocket from yet-to-be built launch site in
Vostochny during 2020s.

The
separation of the Russian segment from the ISS would leave the rest of
the outpost without effective orbital maneuvering capabilities, leaving
the European ATV spacecraft
as a likely candidate to perform the tasks of attitude control and
deorbiting. To achieve this the ATV would have to be modified to enable
its docking with the US segment of the ISS.

Depending
on the operational orbit selected for the OPSEK, it might be necessary
to change the orbital inclination of the modules departing the ISS and
forming the new station. The lowest inclination accessible from
Vostochny is 51.7 degrees, while the ISS is orbiting the Earth with the
inclination 51.6 degrees toward the Equator. It is estimated that one
or two Progress cargo ships would be necessary to push the modules from one inclination to
another.

From
official statements during 2008 and 2009, it is clear that the one of
the chief objectives of the OPSEK complex would be the support for
expedition to Mars. All major elements of the Martian expeditionary
complex, such as main habitation module, Mars lander and
nuclear-powered space tug would dock to the station before its
departure from the low-Earth orbit toward Mars. The Martian expedition
would at the OPSEK as well.
.....
.....
I believe the Russian (and the rest of us !!!) would be well served by a dedicated RUSSIAN
equivalent to the current SAREX program onboard the ISS.
Note the planned orbit. This is of course extreemly advantagous to the cosomauts manning
the station - giving an increase of 70% 'visibility' over Russia. It would be the perfect
stamping ground for an RS10/11 RS12/13 clone built in a Strela frame bolted underneath the
main dome and flown as 'ballast'.
Would you be interested in persuing this proposal if I could get Alex interested enough to
lance the idea through Amsat-RU ??.

It surely! makes more sense than what certain people are proposing with a transponder on
the moon.
Comments, praise and monies to LA2QAA. Criticism and floggings to GM1SXX.

There is a KIWI sat project in Aussie land but what can i answer to someone who asked me what is the AMSAT-NA purpose actually?

With no satellite project in construction and without any sound future project could be they will be more useful in maintaining an "updated
web site" and they can be a new fundraiser for an international AMSAT group? At least for P3E!

I'm always astonishing to see that no one is reacting when a boat is sinking,! But is it really so astonishing...

It is not a question of a moonshine experience but it is a consequence on a VOID and humans does not like "VOIDS"

2603. An alternative ... or ... competition !!!.

Yahoo group: eu-amsat
Date: 2009-07-05 10:46:08 UTC
From: John Hackett
Topic: 2603 Message: 2603

Ladies and Gentlemen,
For those that don't know it, The chief of RosKosmos, the Russian Space Agency *confirmed* last week the Russian intention to pull the plug on the ISS in the 2015 - 2020 timeframe and to construct another dedicated Russian
space station.

According to Anatoly Zak RosKosmos informed NASA of these plans 14 days ago.

The new Russian station is *NOT* intended to be a laboratory like the ISS but more of an in-orbit contruction platform for future Mars-like and outer space missions.

The station will comprise a maintainable 'ball' section with several docking ports with attachable modules.

I propose that amateur radio satellite operators get together and form a group to suggest/try to influence/impliment an ARISS type of project for this space station.

A Strela type frame could be attached to the underside of the 'ball' and since the station is planned for a Molinya type orbit the coverage would be suitable for DX.

The planned orbit would put the station predominently over Russia - as opposed to the current ISS equatorial orbit.

Personally, I would suggest an RS-10/11 RS-12/13 clone with a ROBOT ...
(read: propagation tester) - as these satellites were without the shadow of a doubt the best for recruiting newcomers.

It would, in my opinion, be a viable concept and an alternative to some of the latest 'ideas' of a transponder on the moon ... which wouldn't 'catch' many potential newcomers but would (*IN MY OPINION*) only serve a few dedicated 'experts' ... leading to the demise of amateur satellite communications in general.

Comments, monies and praise to LA2QAA.

Criticisms, horsewhipping and flaming to GM1SXX.

73 John. <la2qaa@amsat.org>

Interested parties may read the following ...

.....
.....
The OPSEK project

By

Depending
on the operational orbit selected for the OPSEK, it might be necessary
to change the orbital inclination of the modules departing the ISS and
forming the new station. The lowest inclination accessible from
Vostochny is 51.7 degrees, while the ISS is orbiting the Earth with the
inclination 51.6 degrees toward the Equator. It is estimated that one
or two Progress cargo ships would be necessary to push the modules from one inclination to another.

From
official statements during 2008 and 2009, it is clear that the one of
the chief objectives of the OPSEK complex would be the support for
expedition to Mars. All major elements of the Martian expeditionary
complex, such as main habitation module, Mars lander and
nuclear-powered space tug would dock to the station before its
departure from the low-Earth orbit toward Mars. The Martian expedition
would at the OPSEK as well.

The station would also play a similar role in lunar exploration. Reusable space tugs could link OPSEK with the Lunar Orbital Station, LOS, in orbit around the Moon, thus creating a transport chain for a permanent lunar base. Such tasks as servicing of modular satellites by orbital tugs based at the OPSEK complex were also cited.

In broader terms, TsNIIMash research institute, a chief strategist of the Russian space agency, formulated the OPSEK concept as a foundation of the nation's space strategy. By 2009, the new station was seen as a cornerstone of a new space exploration plan, which extended four decades into the 21st century. An ambitious program apparently included manned missions to the Moon, Mars and beyond. (344)

Cooperation with Europe and the US

In 2008, Russian plans for maintaining presence in the low-Earth orbit in general and the creation of a successor to the ISS in particular had been met enthusiastically in Europe. As ESA had little hope to match the US effort to return to the Moon at the beginning of the 21st century, preserving a destination in the low-Earth orbit seemed critical for the political support of the manned space flight on the continent.

In June 2009, Simonetta Di Pippo, ESA director of human space flight told the editor of RussianSpaceWeb.com that she shared the Russian vision of the future space station as a platform for deep space missions. "I have continuous consultations with officials in Russia. We meet every month, month and a half, and now we are going to start jointly, the study how to proceed beyond 2025, Di Pippo said, ..."and we have a common idea that we would like to preserve presence in the lower orbit. We are studying different scenarios, whether we need permanent presence or, maybe, a human-tended capability, and we can end up with a totally different solution in the end, but I don’t believe we can leave Earth orbit."

Di Pippo also said that although current NASA plans for return to the Moon reserved no essential role for the station, it could change in the future. "Even on the NASA side, they have too many different developments (associated with the Earth orbit), including commercial involvement, which they can not immediately give up," Di Pippo said.

By the end of 2010, all partners in the ISS project were expecting to agree on the extension of the ISS lifespan from 2015 to 2020 or even 2025. Once end of life for the ISS was decided an active planning for post-ISS manned space flight could begin in Russia, Europe and possibly the US.

While a manned space station in a 70 degree orbit would undoubtedly make a far more useful platform to carry an amateur transponder package than the current ISS, the downside would be the low orbital altitude and resulting small footprint, but having said that, it would be a *far* more practical scenario that all the talk that's going on at the AMSAT-BB at the moment about placing a transponder on the moon. It is at least a scenario that could feasibly take place, rather than one that is just a pipe-dream.

The current ISS was built around MIR-2 hardware and as such, has a finite life. It's life may be extended as far as 2025 but by then it will probably be in the sort of sorry state that MIR was in, in it's final year. The low-inclination orbit is also another thing against ISS.

The advantages of the new Russian proposal as best I can tell are.
1) 70 degree inclination orbit... far more useful than ISS.
and
2) The station would be arranged around a central docking unit with has a passive role. This means that modules could be replaced as they wear out, something thats just not an option on the ISS.

The main disadvantage of placing a transponder on such a craft is the small footprint, but having said that, it would still be a useful thing to have. Of course you'd want such a package to be mounted on the central docking 'ball' rather than on any of the modules... wouldn't you?

Nader,
An explanation from the Internet.

Quieting.

One of the advantages of FM is its resilience to noise. This is one of the main reasons why it is used for high quality audio broadcasts. However when no signal is present, a high noise level is present at the output of the receiver. If a low level FM signal is introduced and its level slowly increased it will be found that the noise level reduces. From this the quieting level can be deduced. It is the reduction in noise level expressed in decibels when a signal of a given strength is introduced to the input of the set. Typically a broadcast tuner should give a quieting level of 30 dB for an input level of around a microvolt.

Hope that explains it.

Hi Nader,
Yes, I see where you're heading.

I agree. A waste of power. This also explains my opposition to FM on an amateur satellite with the major disadvantage of 'capture effect' or one-at-a-time only contacts - where, when two signals compete, only the stronger signal makes it through the transponder.

This is fine for one way telemetry or commercial satellites but it's not very sensible for situations where many users compete for the the passband.
A LINEAR transponder that rebroadcasts a complete portion of the passband is much more useful to radio amateurs.

I'm a 'CW' man Nader so FM is not my forte but hopefully, someone else will be able to be enlighten us a little better than I can.

You are 100% rigth about opposition to FM.
And yes it is waste of money plus waste of power.

Good for digital and Newbies.
Bad for OM (Oscar 13 users)
Ugly at midnigth pass QRM :-)

Was it so difficult to but a liner transponder inside Echo51 ?

Waiting for explation for the Quieting on FM sat.

Could I expand on this theme a little by comparing FM birds to Linear ones.

With FM, as John points out, the strongest signal will 'capture' the transponder. This is probably a major cause of the bad manners so often heard on FM birds, at least in Europe. An FM transponder can only support a single QSO, so short rubber-stamp type QSO's are the norm, and when the bird is busy, the strongest signals prevail. There obviously is then a temptation to increase the power in order to 'compete'... and yes, if you can do that, you probably will 'win' the transponder... and annoy everyone else.

Linear birds are completely different. Apart from the huge advantage that they can support concurrent multi-mode QSO's, the transponder's available downlink power is shared between the signals present in the downlink passband. This is a very effective use of the available downlink power.

The downside of this is that the transponder utilises AGC, so that if one signal is excessively strong, ALL of the signals are then attenuated equally by the AGC system. In effect, if all the users reduce power to the point where the AGC is not activated, they ALL get a bigger slice of the pie.

This is in sharp contract to the way that FM birds operate.

David,
My use of the word Molniya was ambiguous.

I should !!! have emphisised *LEO* elliptical. Let me explain ...

The word Molinya in Russian means (literally) 'lightning' but in a space
context it is accepted to mean ELLIPTICAL ... as per their TV satellite
orbits which are in English dialogue would be classified as *HIGHLY* elliptical.

The planned space station is envisaged in a 70 degree LEO orbit.

I apologise for my misleading remarks.

archie.hackett@... writes:

The
new Russian station is *NOT* intended to be a laboratory like the ISS but

more of an in-orbit contruction platform for future Mars-like and outer
space
missions.

The station will comprise a maintainable 'ball'
section with several docking ports
with attachable modules.

I
propose that amateur radio satellite operators get together and form a group
to suggest/try to influence/impliment an ARISS type of project for this space
station.

A Strela type frame could be attached to the underside of the
'ball' and since the station is planned for a Molinya type orbit the coverage
would be suitable for DX.

Hi John.

Just wondering.... Is a Molinya orbit highly elliptical
?? If so, then it cant really go above 1000km high or the crew will
get zapped by the protons in the lower van Allen belt.

Thanks

David

Hi Nader,

John is a little bit busy at the moment so I'll try to answer your query in a better way.

Well yes, you would hope for crystal clear audio on an FM satellite, but here is one way to consider quieting.

Quieting is an effect or phenomenon on FM transmissions where the incoming signal is strong enough to activate the satellite receiver's limiter stage, which in turn will therefore eliminate noise caused by signal amplitude variations.

A perfect FM signal is said to be 'fully quieting'... as good as it can be. (my simplified explanation).
A weak FM signal is often described as 'scratchy' because that's pretty much what it sounds like.

Capture Effect. On an FM bird, only the strongest signal picked up by the receiver on board will be re-transmitted. This of course leads directly to all sorts of bad manners :-)

Hello Al , John and All

and many thanks for replies and help

Here my Google contribution de

http://www.k0nr.com/rwitte/fmvhf.html

SIGNAL REPORTS
FM signal reports are often given in terms of receiver quieting. A strong signal will fully quiet an FM receiver, while a weak one will be quite noisy. A "Full quieting" report is given to a signal which exhibits no background noise or hiss. Signal reports are often given in terms of "percent quieting" to give the transmitting station a better idea of the signal quality.
Remember that when using a repeater there are two communication paths at work -- the path from the transmitting station to the repeater and the path from the repeater to the receiving station. Either one of these paths can exhibit noise due to a weak signal. If the receiving station has a strong S-meter indication but the transmitting station sounds noisy, the transmitting station is probably weak into the repeater. Remember that the signal strength indicated by your S meter is due to the repeater and not the transmitting station.
A frequency modulated transmitter used on the VHF/UHF amateur bands should be set for a maximum frequency deviation of 5 kHz with full modulation. Unlike SSB transmitters, the signal strength of an FM signal is independent of modulation level. That is, a dead carrier produces just as much power as a fully-modulated signal. Excessive modulation of an FM transmitter does not improve the reception of the signal and often degrades it. On the other hand, inadequate FM deviation causes weak received audio. The level of audio heard on the receive end is relatively independent of received signal strength. This means that changing transmitter power does not affect the loudness of the audio at the receive end.
What I have understood

.

I well repeat this phrase from above text
(A dead carrier produces just as much power as a fully-modulated signal).

So I have understood that the quietness due to unmodulated FM carrier (dead carrier)
That means the FM sat keep on sending carrier even when it hears nothing!!!

Well the Question still persists!

Why the sat downlink transmitter keep pumping dead carrier
If there is no input to the receiver side?

OK, Nader, now I think I know what you are asking. You are not asking about quieting. What I *think* you are asking is something like this ...
'Does the PA develop power in the absence of an input signal at the satellite's receiver?'

The answer I suspect is no, there would be no point in transmitting an unmodulated carrier with no FM deviation present.
FM is a continuous duty mode. The power doesn't vary during transmission. It's all or nothing.

This is a different matter from quieting. To have the PA active in the absence of an input signal would be a complete waste of battery power, a scarce resource on most satellites. The satellite's receiver squelch, or RSSI (look it up) could be used to control the PA.

By contrast, a linear bird only generates RF power when a signal is present in the uplink passband. With no signal present at the satellite's receiver, the PA is still active, but generating no RF power.

OK Nader, I think you are suggesting that you can hear an unmodulated CARRIER (not quietness) with no uplink signal present. Perhaps someone else in the group can explain why. I must admit that I can't see any sense in an FM satellite that transmits an unmodulated carrier and I have no personal interest at all in FM birds. Perhaps someone from the AO51 construction team can answer this one?

AL many many tnx

Summary

FM signal reports are often given in terms of receiver quieting
A strong signal will fully quiet an FM receiver

Notice strong signal (from TX station or sat)
Quieting at receiver side (eg ground station)

Unlike SSB transmitters, the signal strength of an FM signal is independent of modulation level. That is, a dead carrier produces just as much power as a fully-modulated signal

so

Quietness due to transmitting of carrier .
FM sat keep pushing carrier with out modulation
Why dose it waste the power?
Still the question needs an answer!

Yes perhaps someone from FM sat team well help us more.

Thanks for all input and really it is so nice to have thread
With an interesting topic.

tnx again all Gentlemen

Nader , st2nh

Hello Nader

In FM it makes no difference if you speak into your microphone and modulate your transceiver, or you push simply the ptt-knob. But in SSB you have the difference of RF-power or no RF-power. I hope, I understood you right.

On AO-51 I observe regularly a ptt-pusher, but my signal is stronger than his. But it can be other OMs has a stronger signal than I have. This is the daily "war" on AO-51. The result is the well known zoo.

AO-51 transmits a continuous FM signal. Why ? I don't know. SO-50 transmits only, if a uplink signal with 67 Hz CTCSS tone is present.

Thomas,
Unfortunately, you misunderstood Barry Baines's comments about
P3E and Intelsat.

Basically what he said was ...

Amsat-DL did *NOT* have a launch but were in the process of 'looking' for one.

He also said ... The INTELSAT proposal fell through because Amsat didn't have
the money Intelsat required - to put up front for the planned launch.

Please note that I did mention this quite some time ago - (see the archive).

He also noted that the Australian government paid 160 million dollars to secure
a ride on Intelsat and that Amsat couldn't compete.

GM1SXX has used the word 'pipedream'. This was most certainly one of them ...
and is also why my suggestion re the future Russian spacde station is at this
period in time, a viable propasition.

Lets scrutinise the difference between viable propasitions and 'pipedreams'.

One gentleman mentioned that wild ideas often com to fruitation. I disagree.

IMO - wild ideas usually remain just that ... wild ideas.

Subject: [eu-amsat] AMSAT Eagle

Hello All

Today I viewed the video about "Dayton 2009 Barry Baines, WD4ASW AMSAT

Status". See http://www.amsat.org/amsat-new/information/videoNews.php

Now I need your help to understand Barry Baines American English. If

I understand it right, Eagle will go with an Intelsat rideshare into

a geosynchronous orbit over America. And the project Eagle begins at

Zero.

I will not begin a flamed discussion on the "-BB", so I ask here. We

all knows the consequence of such a rideshare.

Thanks in advance and 73

RGR Thomas,
It's important to be able to differentiate between fact and fiction.

As you know ... a 'story' usually changes proportionally to the amount of telling.

You don't need many - (even professional) - operators to change a serious
message into a frivolous one.

"Send reinforcements, we're going to advance"

Soon becomes ...

"Send three and fourpence, we're going to a dance".

(British Army Signals' training example).

Hello Trevor

I mean, if a HAM transponder would be installed on a geostationary satellite like Intelsat and its downlink masks only the American continent, this can never be a HAM radio satellite. If installed from AMSAT-NA you can name it NGO-satellite. But its obsolete now.

I remember me back to 1988. I was in Dayton at the Hamvention at a AMSAT speech from Bob McGwier. The idea was to bring 3 geostationary satellites into orbit to support the whole world. After that this project (Phase 4) was reduced to 2 satellites and then it was cancelled in favour of P3C / OSCAR-13. At this time the cooperation between AMSAT-NA and AMSAT-DL was much closer than today.

I'm also in the view, that all AMSAT-organisations around the world have to come together to push Phase-3E into orbit.

An inofficial message says, that AMSAT-DL needs around 20 million Euro to build the spaceship P5A and bring it to the Mars. And without P5A we will not have P3E. This was communicated at the start of this two projects. The reason is unknown to me and I think also to others. P3E will be a testplatform for P5A with a "Mars simulation transponder". But the ground station in Bochum/DL with its 20m dish is also testet to communicate with P5A as you knows. AMSAT-DL is trying to get the 20 mill. Euros from DLR (Deutsches Zentrum für Luft- und Raumfahrt) (http://www.dlr.de/).

This are the facts I knows of. But its allowed to dream. Also from AMSAT-Eagle. ;-)

Not a Ham Radio satellite but a Ham Radio Satelite Payload. Personally I don't care if Amateurs own the satellite or someone else does it's the Amateur communications payload that's important. BTW I was under the impression that AMSAT-NA were still persuing options with Intelsat.

> An inofficial message says, that AMSAT-DL needs around 20 million
> Euro to build the spaceship P5A and bring it to the Mars.
> And without P5A we will not have P3E.

Lets hope they get the funding so they can purchase a launch package for both satellites. The good thing about this project is that Amateurs can get P3E put into an HEO orbit paid for out of P5A funding. The primary mission of P3E being to test the technology to be used in P5A. After that technology has been tested Amateurs would have an HEO linear transponder satellite to use.

> At this time the cooperation between AMSAT-NA and AMSAT-DL was
> much closer than today.

As I see it the level of co-operation these days is directly affected by the USA ITAR regulations which threaten US citizens with 5 figure fines or long jail terms for co-operating with Non-US citizens.

As far as I can see most aspects of Amateur Satellite construction fall within the very wide scope of ITAR. An Integrated Housekeeping Unit (IHU) would be one example.

We can't have P3E without also building P5A?
I have never seen that in print. I'm glad to read that this was an 'unofficial message'. What I *have* seen is the proposal to build the two craft at the same time. That's a different scenario from suggesting that we *can't* have one craft without the other. In the current economic climate, we'll be lucky to be able to fund P3E, let alone P5A. While it's an interesting idea, IMHO P5A doesn't offer a lot to the average satellite operator / supporter, except perhaps prestige. YMMV. Time to 'get real' folks, especially about financing.

Yes, this is the official statement of AMSAT-DL. Inofficial is the message about the financing of P3E/P5A with 20 mill. Euro from DLR. The leaders of AMSAT-DL does never make every statements about financing. It could be, that this jeopardize the negotiations with the investors. This is their meaning.

Trevor has outlined the technical reason.

> I have never seen that in print.

I as longtime member of AMSAT-DL also not. It was communicated personally. The communication was for a long time a problem with the inner circle from AMSAT-DL. Only members were informed thru the journal about the finished things. Now with Internet its better, but the old ghost is always present.

> I'm glad to read that this was an 'unofficial message'.

See above

> What I *have* seen is the proposal to build the two craft at the same time. That's a different scenario from suggesting that we *can't* have one craft without the other.

Phase-3E is built for 75% (+-). What Trevor also has outlined are the difficulties with the US ITAR. The OnBoardComputer (IHU) will now build by a German OM. This problem is solved now and after that the modules can be integrated.

> In the current economic climate, we'll be lucky to be able to fund P3E, let alone P5A. While it's an interesting idea, IMHO P5A doesn't offer a lot to the average satellite operator / supporter, except perhaps prestige. YMMV. Time to 'get real' folks, especially about financing.

To finance a HAM-satellite with a prestige project like a private mission to Mars is clever but also a poker game. We can lose both projects. I don't know if there is an Ass in the backhand.

From: John Hackett
Topic: 2631 Message: 2631

For those who don't read 'OBSERVATIONS' ... (you should !!!, it's FREE).

73 John. <la2qaa@...>

Joint Observations
07 July 2009
GM1SXX & LA2QAA

The problem
with Space Stations... and a possible Opportunity.

When the
International Space Station is scrapped.... probably in the 2015-2018 time
frame, a valuable space asset will be lost. It needn't have been that way,
and the Russians have wakened up to a new possibility, one that was sadly missed
on the ISS.

ISS is built
around MIR-2 hardware. The core, the Zvezda module, is essentially
unchanged from the old MIR design, a tubular cylindrical living area with solar
arrays attached to a docking 'ball' with five docking ports available.
Once Zveda becomes life-expired, the whole assembly is useless. A
more practical approach would have been to fly a 'passive' six-port docking
ball, to which active modules can be docked. In this way, station elements could
be detached and discarded as they reached the end of their design lives while
the docking ball remains a 'permanent fixture' in space.

Enter 'Orbitalniy
Pilotiruemyi Eksperimentalniy Kompleks', OPSEK, or the 'Orbital Manned
Assembly and Experiment Complex' This is a plan for a future space
station unveiled by the Russians in 2007, and documented by Anatoly Zak on his
web-pages. It centres around the use of a passive 4 ton 'docking ball'
with six ports, to which additional modules can be attached.

Such a docking
ball in LEO would have the primary purpose of 'tying a space station
together', by providing passive docking ports, but it could equally well serve as a
long-lived platform for a 'parasite radio package' in the same way that the old
RS10/11 and RS12/13 'satellites' worked. For those not old enough to know,
these were 'parasite' transponder packages attached to spacecraft that were
powered from the main craft. So long as the packages antenna(s) could be
mounted on the ball's -Z axis, it could serve as a useful radio relay
(transponder) in LEO. Such a package would have a fairly small physical
footprint and would require very little driving power from the 'mother-ship' or
solar panels (if fitted). It would obviously be desirable to derive power from
the mother-ship in the interests of simplicity and longevity.

With launches
becoming increasingly difficult to find on cost grounds, this would be one possible way to provide a future new transponder in LEO. If the package was small and light enough, it could possibly be carried to the (new) space station by a progress cargo vehicle as freight, and attached to the docking ball structure during a space walk. What is more, it could function for a long time, limited only by the overall life of the space complex.

Several people in
the UK already have a track record in building space-rated hardware in addition to another amateur in Holland, who has built space qualified hardware including the backup transponder for HM-1 AKA VUSAT, as well as a new linear 'Pico-Transponder'. They know who they are... you don't need to know, at least not right now :-) The expertise already exists to supply space rated hardware to fly on such a mission. and we do feel that the possibility of flying such a mission should not be passed over. I'm sure there are people in Russia (from the old RS satellite team) who would be just as keen to see this idea fly.

73 AL & John

Yahoo group: eu-amsat
Date: 2009-07-07 17:14:46 UTC
From: Bratu Florian Gabriel
Topic: 2606 Message: 2632

Old mans is just a simple FM repetor.You can compare with ordinary FM terestrial repetors. It transmit any signal from RX entrance. On SO 50 the signals are clear and noise or other carriers missing because he is activate with 67hz ctcss (plus 74hz trigger).A very eficient protection, that also permited a high level sensitivity. AO51 doesn't have anymore the CTCSS activate, so it grab all noises and carriers in its range at every pass. It was more than one year ago a very noiseless and clear bird when it have the ctcss activated. I don't know the reason that control team maintain the ctcss down, maby across USA is low radio noise.
The FM birds are very good for /p contacts. For example i was last week on mountain top about 2500-2545 metters (no cars,no roads, no power sources etc.) climbing with my friend YO9GVN and a handy and small portable antennas was all the /p shack. hi
Very easy contacts in that conditions, with peak tend and weared weather (in general we was inside the clouds or above)
http://www.youtube.com/watch?v=vnq6b8XK2Jo&feature=channel_page
So the FM birds are also good in special in portable conditions and minimum equipement, the linear transporder is great but in static conditions.
About the noise just compare AO51 and SO50 to see the difference.

> I have never seen that in print.

Hi Allan,

I have always understood that the two projects were tightly linked with P3E being used to test various technologies required for the P5A mission.

An AMSAT-DL statement on the joint project issued in July 2002 can be seen at

http://www.amsat-dl.org/p3e/pm020726en.pdf

The P5A mission has much to offer Amateurs primarily interested in the technical side of the hobby.

P5A is a good way to raise funding from outside sources. It's the type of project that Government institutions and large organisations may well be willing to provide considerable funds for. The Amateur community alone couldn't raise the money to pay for a single HEO launch let alone two.

Impressive unofficial update about what's the next steps could be guys.

Since 2001 i always notice it is extremely difficult to have regular and up to date details about amateur spacecraft construction progress.

As AMSAT-NA does not have any plans, we can only rely on AMSAT-DL but there too information "mostly in German" is quite hard to get.

Is P3E is ready to fly? plans was for a satellite ready for launch in 2009? AMSAT-DL use to give some report on AMSAT-NA BB about their
progress but since a kind of break in their relation with AMSAT-NA nothing show up on AMSAT-NA BBanymore!

If they have some issues when postiing on AMSAT-BB they can use EU-AMSAT reflector. As you pointed out there will be about 8 shuttle
launch toward ISS Some cube sats where launch from the shuttle in the past and they even launch a commercial satellite from it.
Is P3E can be bring aboard and dumped over board? Is the russian automated cargo progress vehicule can be used to bring something up?

The Chinese and Japan also want to be in space. France with Arianne and the new Russian rocket complex at Kourou will also be ready soon to
put things in space.

Amsat-DL is exploring space-X launch ride too.

If money is now a new way to give excuses from a lack of will? that i don't know but it will be more and more important to keep the crowds
aware even if there will be nothing new about the next HEO or next amateur cube at least this will keep the flame on.

There is some mutual pass between eastern NA and EU i check some in the recent days and nobody show up could be YOU in EU can give us a
brief report about the satellite activity in EU or in the middle east? I know that AO-51 seems to be quite "HOT" at times as per some poor

usage commenting read over the BB...

Thank's all to try to keep us inform and out of the darkness.

Hi Bratu

Thank for reply
Yes this so simple answer and technically so logic for my question!
Noises keep the FM sat transmitter on .Which produce the quietness
in ground station RX.
Neither due for good audio nor for audients as in FM broadcast station

Best regards

Nader

Hello all the problem solver is back...

One way or two way that is the question!

If i received on my modified pager an EMERGENCY text and i take my HT to call back on my local repeater the sender! Am i in some sort of
violation!!! If it's to pick up a pizza that my wife ordered over the 600ohms to my local pizzeria and i called her back telling her YES am
i also offending any rules or law? For the offended virgins my wife is also a ham and she could also call me back on my local repeater
too...

Could be concentrating on ways to UNITE those interested in having an HEO could be more useful?

Sorry for EU-AMSAT reflector another cross post just in case he will be censored AGAIN here near a free XXX land

Poor souls Benedict XVI just issued a letter for you

P.S. Stupidity has no frontier!

This part is all I can see that 'interlinks' the projects.
Additionally the P3-E spacecraft will be an important test bed for some technology needed for the Mars mission.

I don't take that to mean that we can't have P3E without also building P5A. P3E would be a test bed for P5A technology. Thats a different thing. As to the means to fund P5A, I'm seeing a lot of 'could' 'might' or 'maybes' re attracting outside funding.

P5A would only serve the interests of a few. Is it fair to expect the general membership to help fund such an enterprise at a time when costs have become such a major issue. Sure, it would be an 'interesting' project to many, but outwith the prractical reach of most.

Propulsion..... err, nuff said :-) Ouch!

I also have never seen a printed explanation why P3E and P5A are linked together. The infos came in peu-a-peu. Today, and after our discussions here, I think the mainly reason is the financing. See also my previous posts here.

> I don't take that to mean that we can't have P3E without also building P5A.

This is the official statement from AMSAT-DL.

> P3E would be a test bed for P5A technology. Thats a different thing. As to the means to fund P5A, I'm seeing a lot of 'could' 'might' or 'maybes' re attracting outside funding.
>

There are too less or no informations about the financing. See also my previous posts here. For me its also nebulous.

> P5A would only serve the interests of a few. Is it fair to expect the general membership to help fund such an enterprise at a time when costs have become such a major issue. Sure, it would be an 'interesting' project to many, but outwith the prractical reach of most.

Yes I agree there's nothing in print that explicitly says P3E depends on P5A that's just the impression I'd always been under. I'd never really thought of them as two seperate entities.

Anyway I'm hopefull that P5A will prove attractive to sources of outside funding - Mars is exciting to people outside the Amateur Radio community.

The AMSAT-DL website has been reporting the various components of P3E that have been completed and from those reported so far you can conclude which modules have still to be done.

Now personally I would guess that once all the modules have been completed it'll take some 6 months to integrate them assuming no major problems are found. That's just a personal estimate I'm sure others may differ.

The major hurdle though is getting a launch without which everything else is meaningless. Now I work on the assumption that actual launch won't occur until a year after the announcement that they've secured one. As there is no announcement yet I'm assuming a P3E launch would now be late 2010 at the earliest and more likely 2011/12 with P5A following in 2013 or 2015.

AMSAT-DL have acheived a remarkable amount over the last few years with just a handfull of volunteers. I find the work that's gone into restoring the facility at Bochum incrediable and they've acheived some outstanding results there. The recent reception of echos bounced off Venus using their 6 KW 2.4 GHz Tx was a clear demonstration of their ability to command a spacecraft at inter-planetary distances and it achieved valuable Media coverage in Germany.

Now I'd also like to see some nice simple 145 to 29 MHz or even better 29 to 50 MHz satellites being launched (the later would require changes to ITU regulations first which will take many years). But such satellites would only be usefull if they were in a decent orbit. I consider orbits below 1000 km to be of little use.

Despite its narrow bandwidth the VO-52 435/145 transponder is hardly ever full of signals and I put that down to the short pass times and short distances that you get with such a low orbit.

So I see the basic problem as being how do we get Amateur Transponders into a 1400 km or greater orbit at low cost ?

My choice the Yaesu FT-847 and as Thomas who was gently rebuked for his scepticism and furnished with the evidence he had demanded - seeing in Christ's hands the point of the nails and putting his fingers in the place of the nails and his hand into His side. I'm also not too convince that all the other HF/VHF satellite radio are not up to the 847 But Yaesu did quite a good job on this one even if the early model come on the market with some minor issues.

Sorry for the non believer but just try an 847 and you will see the light come through... and no birdies noted here on the various satellite satellite frequencies

We just survive a 1929 look a like crash it is a good step in the right direction IMHO

P.S. The one who censored the AMSAT-BB is probably a creationist who is creating something from thin air... Could be a she too or a mixed

of both!

In the cold war era an American was arguing with a Russian about the speech freedom in the US "Here we can go on the steps of the capitol
and we can say anything against the US. The Russian reply " In the USSR we can can also go on the steps of the Kremlin and we can say
anything against the US too!

It was in the cold war era but the same joke can be reworded and she will be still actual. Time pass mentality not always.

2650. 'Private Venture' ISS re-supply flights.

Yahoo group: eu-amsat
Date: 2009-07-21 08:02:51 UTC
From: Allan Copland
Topic: 2650 Message: 2650

Hi Folks,

This one is a little bit off-topic but should be of interest to some.

NASA seems to have booked a *lot* of flights, around a dozen, with SPACEX who currently only have two orbital launches under their belt.

It would appear that NASA sees their (uflown) Falcon9 vehicle as a means to resupply the ISS. The first successful orbital flight of Falcon1 only carried a dead mass simulator (perhaps a missed opportunity?) while the second carried a conmercial satellite RazakSAT into orbit.

http://www.spacex.com/
http://www.spacex.com/launch_manifest.php

Falcon9 Rocket
http://www.theregister.co.uk/2009/01/02/falcon_9/

Dragon Cargo Capsule
http://www.spacex.com/dragon.php

The first test flight (of three planned) of the Dragon9 rocket is due from Cape Canaveral this year with ISS resupply flights due to start in 2011, a mere two years from now. Seems rather ambitious to me.
The Dragon Cargo Capsule is a Progress look-alike minus the BO module but is heat-shielded and capable of returning goods from space rather like Soyuz. Spacex is headed by Elon Musk (Mr Paypal:-).

Things are about to get interesting!

Indeed, lets keep fingers crossed that Falcon-9 eventually proves to be a successful launcher.

They had 3 launch failures with Falcon 1 and I guess it's inevitable they'll be some with Falcon 9 until they get all the design faults ironed out.

Drew KO4MA mentioned on the AMSAT-BB that "SpaceX had to refit the launcher with a vibration dampening system", which bounced CubeSat and InnoSat. This indicates they still have some design issues to sort out on Falcon 1.

It's good to have another launch company as the competition will eventually reduce overall launch costs and in the early stages may provide some very cheap launch opportunities albeit at greater risk as we saw with the CubeSats on the ill-fated 3rd launch of Falcon 1.

2653. AMSAT-UK Colloquium at Guildford This Weekend

Yahoo group: eu-amsat
Date: 2009-07-22 20:48:49 UTC
From: Trevor .
Topic: 2653 Message: 2653

Just a final reminder that the AMSAT-UK Colloquium takes place at the Holiday Inn hotel in Guildford, England on Sat/Sun July 25/26.
Nearest airports London-Heathrow and London-Gatwick.

The event is open to all Radio Amateurs and SWL's.

The programme can be seen at
http://www.uk.amsat.org/content/view/679/266/

Among the many presentations are:
• Earth-Venus-Earth Project Report by Peter Guelzow, DB2OS, AMSAT-DL
• Software Defined Radio reception of Satellite Signals by Drew Glasbrenner, KO4MA
• Medium Earth Orbit (MEO) Options by David Bowman, G0MRF
• ESEO Mission Update by Graham Shirville, G3VZV

Booking details are at
http://www.uk.amsat.org/content/view/25/49/

AMSAT-UK Colloquium
http://www.uk.amsat.org/content/view/32/42/

AMSAT-UK publish a colour A4 newsletter, OSCAR News, that is full of Amateur Satellite information. Join online at

2654. PE1RAH New Mode U/N Linear transponder

Yahoo group: eu-amsat
Date: 2009-07-24 09:50:53 UTC
From: Allan Copland
Topic: 2654 Message: 2654

Hi Group.

PE1RAH has been working hard on a Cubesat compatible *linear* mode U/V transponder and is preparing for a trip to Japan to show it off at the forthcoming Ham fair in Tokyo on the 22nd and 23rd of August.

The transponder itself is very small and weighs under 30 grams, having been designed for CUBESAT compatibility. William has packaged it up for demonstration purposes in a perspex enclosure for public display at the fair. It's a Mode U/V transponder and is PLL based.

Some words from the man himself.....

>Hi Allan,
>I have been busy in the last few days to get my demo model ready.
I've sent you some pictures of the complete test module, on which the transponder safely can be tested. It has an onboard 3.7V dc stabilizer, and a simple switching power supply is enough to run the whole system. With a simple laptop and programmer the transponder and its beacon can be programmed in any frequency wanted.

>Maybe you can show the pictures to the ham world on your website.
This demo system I will take to the Ham Fair in Tokyo on 22nd and 23rd August, where I will present it at the JAMSAT booth.

>My kind regards,
>William Leijenaar, PE1RAH

You can find a couple of photos of the finished Transponder at...
http://www.observations.biz/PE1RAH/index.html

We hope to add more photos after William's forthcoming trip to Tokyo.

William's previous SMD based transponders were hand-soldered, a very time-consuming and demanding task. This one was constructed using the reflow soldering technique which allows better product quality and removes the need for post-soldering cleanup of fluxes and residues.

From: g4dpz
Topic: 2655 Message: 2655

Hi,

We are pleased to announce that Dr Andreas Mogensen, currently at SSC and recently selected as one of the new the ESA Astronaut corps, has agreed to give a talk in the 1015-1100 hrs slot on Saturday 25th, covering briefly the history of the ESA astronaut corps and then about the steps that he went through in the year-long selection process. He may also touch on the work he is doing at SSC on their lunar mission planning.

2657. FUNcube a UK Linear Transponder Satellite

Yahoo group: eu-amsat
Date: 2009-07-25 11:16:59 UTC
From: g4dpz
Topic: 2657 Message: 2657

Hi,

AMSAT-UK has announced a new amateur satellite project ☐ FUNcube ☐ that features a 435 to 145 MHz Linear Transponder for SSB/CW operation. The project has received major initial funding from the Radio Communications Foundation (RCF) and is expected be developed in collaboration with ISIS-Innovative Solutions in Space BV.

FUNcube is an educational single cubesat project with the goal of enthusing and educating young people about radio, space, physics and electronics.

It will support the educational Science, Technology, Engineering, Maths (STEM) initiatives and provide an additional resource for the GB4FUN Mobile Communications Centre.

The target audience consists of primary and secondary school pupils and FUNcube will feature a 145 MHz telemetry beacon that will provide a strong signal for the pupils to receive.

It is planned to develop a simple receiver board that can be connected to the USB port of a laptop to display telemetry in an interesting way.

The satellite will contain a materials science experiment, from which the school students can receive telemetry data which they can compare to the results they obtained from similar reference experiments in the classroom.

FUNcube is the first cubesat designed to benefit this group and is expected to be the first UK cubesat to reach space.

More details can be found at:

Excellent news about FUNCUBE.

However, I'm just a wee bit sceptical about the - (quote) ... "using one of the many
launch opportunities that exist for Cubesat missions" ... (unquote).

Perhaps Graham would like to point EU-Amsat in the general direction of one
of these 'many' launches - since the community currently has 3 satellites
looking for an affordable launch.

I'll be very pleased to pass on this most interesting news to the people
concerned.

FM ON A LINEAR TRANSPONDER.

An OBSERVATION by LA2QAA & GM1SXX. 0508091500Z.

FM on a 'linear' transponder? ...

Yes, it 'can' be acceptable and here's how and why ...

Two sentences that appear in the FM v LINEAR debate, time and time again are ...

1) We should encourage the 'FM' operators to upgrade to CW/SSB.

2) One *shouldn't* run FM on a linear transponder ... and ...

Take the first sentence ...

It *IS* possible to encourage the use of CW on an FM satellite *WITHOUT* starting WW3.

This article will attempt to explain how, but first ... a few words about the second sentence.

The reason FM on a linear satellite is 'frowned' upon is invariably given as - FM is is a single channel 100% duty cycle mode - and - you will be 'stealing' both power and bandwidth from other users.

In FM voice mode yes, in modulated CW mode not as much!.

FM bandwidth = approx: 5000Hz. SSB = 2800Hz. CW = 800Hz.

FM = constant RMS watts v SSB/CW = PEP - powerwise, vastly different things.

An FM 'carrier' is essentially a NARROWBAND SIGNAL without modulation.

The difference between FM voice and 'FM' CW is ... modulation! In short, CW on an FM rig is AM.

A GENUINE FM satellite like AO-51 can't handle AM. (CW/SSB) It demodulates FM internally and REGENERATES it. It CANT handle AM because it can't resolve an AM/SSB signal... it can only do FM.

However, a LINEAR satellite like VO-52 will forward *anything* it hears because it is a simple frequency shifter (bent pipe) for a block of frequencies and it is LINEAR (any mode). This DOESN'T mean that using FM is acceptable. The two modes arn't really compatible. Sending FM *VOICE* on a linear satellite sends all the wrong signals' to potential newcomers because it causes problems for normal linear users *BUT* ... one can send modulated CW (MCW) on FM and avoid most of the problems one would cause with FM voice on a linear
satellite.

Bear in mind this ...

the available power in a linear transponder is distributed ACROSS the transponder passband. Wideband sigs (assuming everyone is being sensible:-) hog more power than narrowband ones. BIG signals run the batteries down!
With FM, everyone by default runs big signals. 5W FM is more than 5W PEP!

If you run FM on an FM bird, any stronger signal will simply obliterate you. The transponder doesn't care... power consumption is static on FM.

If you run 'normal' levels of FM voice on a LINEAR bird, you obliterate the transponder for everyone else.

Some of the older amateurs have been know to have CW QSO's on FM satellites by keying the PTT on a handheld ... a bit 'chirpy' but it *IS* readable.

A better approach is by feeding a clean keyed carrier into the mic input of an FM rig with an appropriate PTT circuit ... BUT KEEP THE POWER DOWN ... you *DON'T* !!!! need a lot of power on CW and you *SHOULD* have a better aerial than a piece of wet string to receive VO-52's signal.

Contrary to popular belief by certain Hams it is *NOT* forbidden to use FM on VO-52 (aka HAMSAT). This information may be checked by visiting the Amsat-India website where the modes stated are CW/SSB/FM.

Certain areas of the world favour CW/SSB equipment for the LINEAR satellites while others, mainly those trying satellite operating for the first time usually only have FM equipment. VO-52 allows both ! but ... common sense should prevail.

One of the main reasons given for the - 'you MUST use SSB' - argument is that in a lot of the more afluent countries CW/SSB gear is abundant.

Norway is self proclaimed as one of the richest countries in the world but I can assure everyone that there's a definate lack of multimode VHF/UHF equipment here - whereas everybody and his dog has an FM rig ... just like in Australia ... and they too usually have the
odd couple of shillings to rub together.

The argument that is most popular 'AGAINST' the use of FM (voice) on a LINEAR satellite like VO-52 is ... If you use excessive power you could turn the transponder into an FM single channel satellite.

However, as this article tries to explain ... you don't *HAVE* to use excessive power, especially on MCW. In fact, the less power you do use - the more advantagious it is for everybody concerned.

Generally speaking, Highly populated areas like North America and Europe usually use CW/SSB on VO-52 whereas lesser populated areas like India, South East Asia and Australia may use FM ... but by feeding a keyed audio signal to an FM handheld's input (with a suitable PTT system) will allow you to use MCW (modulated carrier wave) ... ie ... carrier keyed on/off. Technically A2A but in effect, the same as A1A.

As previously mentioned, much has been made of the recruiting of potential newcomers to the satellite scene via FM (satellites like VO-51, AO-27 and SO-50) then encouraging the

potential newcomer to 'upgrade' to CW/SSB while waiting for the 'elusive' HEO (High elliptical orbit) satellite that will provide DX contacts.

Use a cheap automatic keyer to feed the audio to your FM rig.

... but I can't copy morse ...

Learn !!!.

...but I don't have a key ...

Modulate the audio input with a code practice oscillator or a miniature keyer like the one described below. As long as the audio is 'clean' (no chirps and burps) it will be fine!. As a radio amateur you should know something about audio filters. If you don't ... again, learn !!!.

Amateurs with a few years of operation under their belts will remember that thise with FM only rigs used ti use the PTT switch as a keyer. It was quite 'chirpy' but it *WAS* copyable and allowed for CW operation in lieu of a multimode transceiver.

PICTURE OF 'spicebox' KEYER HERE).

There are a myriad of miniature electronic keyers available. The one pictured here is built into a spice box and uses 2 x microswitches 'borrowed' from a joystick. There's an RCA female phono for audio output and a potentiometer for controlling the speed and the programmable memories.

We hope this article will give food for thought.

Thomas,
Read the title!!! ... it says FOOD FOR THOUGHT ... yes?.

Nobody asked *YOU* to learn morse code, in fact, nobody asked anybody!
to learn it. It's a free choice. I implied that if you WANT !!!! to transmit CW
but don't know CW ... lean !!!.

That is *NOT* !!! implying that *YOU* or anyone else 'ought' to learn it.

I hope that clears up your obvious misunderstanding.

From: John Hackett
Topic: 2668 Message: 2668

Hello Folks,
I want to make it perfectly clear that the article I wrote - FM
ON A LINEAR TRANSPONDER is/was entirely my own and that GM1SXX had nothing
to do with it - he is in fact, completely against the idea and warned me that chaos would
abound.

My intention was to offer an idea to help the potential newcomer to upgrade from
FM to LINEAR sastellites.

Judging by the criticism I've already received, a misguided attempt on my part.

Any further criticism should be directed at me and me alone.

73 John. <la2qaa@...>

Hi John and the group.

To be fair, I did point out to John in a private email that CW sent from an FM radio by keying ONLY the PTT line would in fact produce a carrier only. This technique has already been tried with reasonable success on the *FM* birds.

An FM transceiver when keyed (and no audio present... microphone input shorted out or mic disconnected) should of course only produce a narrowband unmodulated carrier. The only problem I can find with using an FM radio in this way on a linear transponder is that the synthesizer takes a finite time time to lock up, hence the chirpy note, but in essence it's just a plain carrier with no modulation and therefore should be acceptable to use on a linear bird, so long as excessive power is avoided at all cost. For those who understand how to do this, the idea should be workable but it's important not to have any modulation present on the keyed signal.

Just my 0.1 pence worth on the matter.

Re Morse code. For anyone who can't send and receive CW, then the above is not an option for you. Just ignore it!
The advantages of CW are many, so you can either avoid or embrace it. Your choice completely. One thing I've noticed is that at my local radio club (EARS in Elderslie, Renfrewshire), people seem more interested in ever in learning Morse, now that they are no longer forced to learn it to get a full license. We also have a six year old girl who regularly attends the club with her father and who likes to send and receive Morse code. It's just another game for her, but one she's rather good at. She's pretty good on licensing conditions too, having corrected me twice while on the air! But hey I digress.

The problem of a potential newcomer is the right information:

What do I want ?
How do I do it ?

Our group is a good starting point for questions. If a newcomer buys
a FM HT for the FM repeater satellites, its OK. If he then sees there
is a chaos on AO-51 and he wants to make more QSO's over FO-29 and
VO-52 he goes a step further and buys a new TRX with SSB. Where is the
problem ? Money ? Then he can buy one from eBay or another HAM-platform
on internet. Or he goes to the next fleamarket.

I would like to clarify, I'm absolutely not against CW operation. I haven't learnd it and I will not learn it. If a six year old girl learn morse code and have fun, this is super. I for one decode the CW-telemetry from the CubeSats with my old PK-232 TNC.

Hi Thomas and the group.
(with apologies for changing the thread header)

I also have owned and used a PK232 for many years, and although a a very good and useful machine, especially for RTTY, it doesn't cope at all well with weak, poor or distorted signals of any sort. It only works properly with good clean copy.
When John and I were very interested in decoding telemetry data from Oscar7 some years ago, I could hardly copy anything in the noise (by ear) while John (ex signals CW trainer) managed to make excellent sense of the distorted, warbling and weak signals from the bird. With the data we collected, we managed to prove to our satisfaction that many of AO7's systems at that time were functional.

The PK232 would resolve absolutely nothing except complete gibberish from such signals. Amateur radio should be about having fun, learning and self-training and it's sometimes easy to condemn older data modes such as CW as boring or unexciting but the fact remains that CW excels in poor conditions, something I for one believe will assure it's long term future.
IMHO, using machines or softwareis not a good way to try to decode satellite telemetry unless you have rock-solid copy, and with satellites, thats often not the case. In fact I find that MIXW does a better job than the PK232 machine but ears (and the tunable filter between them) work far better still. Thats really why I got interested in CW after many years of resisting it as something I didn't want to be involved in. Although still not my favourite mode, I can readily see the advantages it has over many other modes.

Hello Al

I found an other intention to decode CW with a TNC. The audio bandwith
from my PK-232 is narrow, so I can evaluate the correct downlink frequency
of any CW-CubeSat and LO-19 with my tracking software. I can see, that the
STARS CubeSats KU and KAI oscillates in their donlink freqs. After a week
the QRG in USB is a few 100 Hz lower or higher.

To Thomas and the group,
The intention of the article? ...

I've read several times complaints that there is 'nobody' on the VO-52 transponder. - (Amsat-bb).

My thoughts were thus ... if nobody is using the transponder anyway, it wouldn't be detremental if 2 users with MCW and low power used it.

A lot of the 'FM only' people say that multomode equipment is expensive.

The article was intended to show one possible way of trying CW on a handheld without going to the expense of a multimode rig.

While I *am* an ex: CW instructor and CW aficiondo I have NEVER* forced it down the throat of anyone else -but can't help pointing out that CW is the original 'digital' mode, it uses far less bandwidth than pretty much anything with the exception of PSK31 - (let's not split hairs Gentlemen) - and usually gets through where all else fails.

It doesn't suffer the 'doppler' problem like PSK31 either.

There *IS* a reason it's used for beacons on satellites - commercial ones too.

Ohh yes ... with two experienced operators it's also faster! than two young people with SMS.

Those were my reasons for writing the article Thomas.

Hello Folks,
I can't resist! commenting on GM1SXX's ...

> ... ears (and the tunable filter between them) -

I can assure you, when all manner of 'machines' throw in the towel while copying CW, a trained operator (human) will just carry on regardless. His built-in 'filter' (the grey matter between his/her ears) just autotunes itself.

In the signals, while teaching new operators we had a bank of tunable oscilators connected to the training apparatus so that we could superimpose 'atmospheric disturbances' on top of the signal.

Faling to get 98% copy in the 'QRM' resulted in a sharp rap across the knucles with a steel rule ... F ... (dir, dit, dah, dit) - "DID IT HURT YOU?" ... nobody ever forgot the letter F after that.

Q = Here comes the bride ... (dah, dah, dit, dah)

V = Beethoven's 5th ... (dit, dit, dit, DAH!)

Keeping the 'squaddies' interested was the key success.

Of course, these days, a rap across the knuckles would have the soldier abuse people wetting themselves.

An interesting observation Thomas. Perhaps caused by heating and cooling of the onboard crystal reference oscillator.

Some other satellites also drift a little in frequency over time and I suspect that changing thermal conditions within the crystal oscillators are responsible. I don't know of any birds that use crystal ovens, probably because they are rather power-hungry.
Even the Murata PTC crystal heat-clips used by some experimenters consume quite a bit of electrical power. Too hungry for a CUBESAT.

I would encourage anyone with the means to measure frequency drift accurately to contribute their findings re satellite beacon frequency drifting.

As far i can remember the purpose of having VO-52 uplink on UHF was about a lack of UHF all mode TX rig availaibility in indian and some
Asian area. I was told also VO-52 FM operation is not uncommon over theses area. For the CW over an FM sat it is not a big problem but the
sharing system should always be taken in account. I for one "probably" test the first DSTAR transmission on AO-51 in a period where nobody
was on the satellite and i got a message back stating i should ask for a "DSTAR" slot time as it can messed up with other users? How i can
messed up with other users when nobody is using the satellite?

Hello Luc,
Yes, I remember very well your D-Star post ... and the rather
'amusing' (negative) reply from Amsat.

In principle, my MCW suggestion was exactly the same, why all the hue
and cry about MCW on VO-52 if nobody is using the transponder anyway?.

It is my belief that most amateurs are responsible enough to be able to
determine whether to use the mode - or not - depending on transponder
activity.

Maybe you should have just done it Luc ... I seriously doubt if anyone had
even realised/known about it.

Very true Thomas. In fact Howard G6LVB has been doing exactly that, having designed a DSP IF system for satellite use (STELLA) in conjunction with other hardware from Sam Jewell G4DDK abd David Bowman G0MRF, and I'm sure others from AMSAT-UK.
More at..
http://www.g6lvb.com/Articles/STELLA/index.htm

I don't think any of this stuff will fit a CUBESAT through, but it could provide an effective DSP based IF system and LEILA as a software based system for larger birds. Both ATMEL and MICROCHIP make DSP capable embedded CPU's.

I suspect that a cut-down version could be used in a CUBESAT because these dedicated CMOS CPU's are quite power efficient.

Hello Al

I meant a DSP-TRX in my shack, not on the satellite. But you brought me to an idea: Why not use such a DSP-transceiver like STELLA on the ground ? You have only to reverse the frequency-bands and it will work as groundstation and is cheaper than a high-tech multi-mode Icom or Yeasu "machine".

Howard first demonstrated his STELLA 435/145 MHz transponder at the AMSAT-UK Colloquium in July 2005 and also gave a follow-up presentation in 2006:
http://www.southgatearc.org/news/july2006/crossband_linear_transponder.htm

The main drawback of this approach is the power consumption. I understand that the version being developed for P3E will consume 1-2 watts. Not a problem for P3E but a major drawback for a 1U Cubesat.

I gather a varient has been developed that only consumes 300 mW but even that would be outside the power budget of a 1U Cubesat, but could be feasable for a 3U Cubesat.

Hello All

My idea is to produce a VHF/UHF DSP-TRX for the groundstation, see my previous mail. But I'm not a DSP-freak or technician to produce such a kit. Or to transform STELLA into "STELLA 4 ground".

Johns orginally intention was to lower the costs in the shack for more lineartransponder traffic. This is a way to do it. I had only the idea. I'm not the only one, see http://www.qsl.net/amsat-dsp-radio/

Hi Group.

My own thoughts are that DSP onboard a satellite could lead to all sorts of advantages ... and a few disadvantages.

Advantages.
1) LEILA in software.
2) Active filtering of poor signals
Disadvantages
1) Added complexity = yet another failure mode, unless the DSP can be switched out of the signal path under ground control.
2) Additional power requirement.

I don't know if RAD-HARD DSP solutions exist. On the ground, some will favour DSP based radio systems, but I suspect the potential market for satellite DSP radios will be small and any solutions will not be cost-effective enough for widespread use. Not everyone is a fan of DSP radios. I'm certainly not. YMMV.

It is not a new fact very few has been active the exception was Valery Korzun and the space tourists. Could be the ISS repeater
configuration can be put in service as the signal is very strong and it will be a great newbie sat? The SSTV sessions seems to be always
short sessions up to the batteries life!

A great amateur radio space assets who can be much more useful if it was just put in the repeater mode. +- The ARISS contact session

2691. FUNcube on Front Cover of Electronics Weekly magazine

Yahoo group: eu-amsat
Date: 2009-08-11 21:02:43 UTC
From: Trevor .
Topic: 2691 Message: 2691

AMSAT-UK's FUNcube satellite project features on the front cover of the August 12-18 edition of Electronics Weekly magazine

The printed edition of the magazine will be dropping through letterboxes during Wednesday morning and you can read the digital version of Electronics Weekly magazine online or download the pages in PDF format at

http://cde.cerosmedia.com/1D4a803d8814a11352.cde

The full FUNcube article titled 'Bringing FUN back to the classroom' by Steve Bush is on page 8 and contains an interview with Graham Shirville G3VZV.

FUNcube is an educational single cubesat project with the goal of enthusing and educating young people about radio, space, physics and electronics. It has received major initial funding from the Radio Communications Foundation (RCF).

It will support the educational Science, Technology, Engineering, Maths (STEM) initiatives and provide an additional resource for the GB4FUN Mobile Communications Centre.

The target audience consists of primary and secondary school pupils and FUNcube will feature a 145 MHz telemetry beacon that will provide a strong signal for the pupils to receive.

It is planned to develop a simple receiver board that can be connected to the USB port of a laptop to display telemetry in an interesting way.

The satellite will contain a materials science experiment, from which the school students can receive telemetry data which they can compare to the results they obtained from similar reference experiments in the classroom.

FUNcube will carry a UHF to VHF linear transponder that will have up to 1 watt and which can be used by Radio Amateurs worldwide for SSB and CW communications. Measuring just 10 * 10 * 10 cm, and with a mass of less than 1kg, it will be the smallest ever satellite to carry a linear transponder and the choice of frequencies will enable Radio Amateurs to use their existing VO-52 or DO-64 station.

A key feature of the satellite is the absence of an On-Board Computer. For reliability and maximum power efficiency, the design has been kept as straight-forward as possible with satellite control being achieved using simple commands.

As the earth circumference shrink towards the poles the same satellite footprint will cover more distance. This does not diminish this
quite impressive edge QSO. I was also making one of FO-29 with Domenico I8CVS last year and it was below 5 degree. Some have reported
having hard time with DX QSO'S due to their location on the planet i think the south pacific Australia and New Zeland region is the less
favourable spot as they are surrounded by oceans and the south pole.

Could be i'm wrong here if you know the worse place to be on earth for an amateur satellite operator just mention it? (Poles excluded)

P.S. For those who come after AO-40 this was one of the explanations why an HEO is the ultimate goal for an amateur satellite operator. As
P3E is one of our last card to play for an HEO it will be also the last chance for a lot of us who will probably not be able to see it
happen in their life time. As i ever said aging is a sickness and when your weekly pills bills became higher than your supermarket food
bill this will tell you that you are old.:(

Hi Folks,

Quote from this thread....

"As the earth circumference shrink towards the poles the same satellite footprint will cover more distance."

This *sounds* like an informed statement.
Lets examine it in a little detail.

It's simply not true... neither half of the statement, no matter how you consider it.
Sorry, but it's total rubbish in fact.

The circumference of the earth around the equator is around 40,075.16 kilometers or if you measure through the poles, it's about 40,008 kms. It's like a beach ball with a slight bulge near the Equator.
The circumference to most intents and purposes is pretty darned constant.

So, the Earth's circumference is simply a number, around 40,000,000 metres, give or take... unless you are concerned about the little bit of an equatorial 'bulge' is has, like all other planets have.

Many satellite tracking software uses the ratio of 1/298 for the bulge's ratio. I'll leave you to decide if that's accurate or not.
Either way, it's a *small* bulge in relative terms.

The Earth is an ellipsoid, and not a perfect sphere. It has a bit of 'middle-age spread'... only joking!

Still with us?

Now, did it mean the Earth's radius (half the diameter), rather than the circumference? It doesn't alter much either, because they are related quantities. It's a little bigger East-West than North South, as mentioned above... because of the aforesaid bulge at the Equator.

"As the earth circumference shrink towards the poles"... not true
Thats the first half of the sentence dispensed with!

Take part2 of the quote now....

"the same satellite footprint will cover more distance." Also not true.

AO7 like most amateur satellites is in a near-circular orbit.

So for LEO birds, satellite footprints stay pretty much the same no matter where you are on the Earth, either polar , temperate areas, deserts, oceans or equatorial.

The footprint of a LEO is pretty static in terms of area, and the distance travelled by a bird over the Earth's surface per unit of time is likewise pretty constant.

The only thing that changes the size of a satellite's footprint is orbital altitude. A bird in a higher orbit sees more land area than one in a lower orbit. Simple! Molniyas are a bit unusual, but AO7 is not in a Molniya (Lightning) orbit. It's in a near-circular one.

Thats part 2 shot to pieces!

I'm certainly confused over what "As the earth circumference shrink towards the poles the same satellite footprint will cover more distance" might mean!

Still, it caused me to think, and thats a good thing, isn't it?
Amateur radios *is* intended to be a technical hobby after all :-)

Some people really do talk a load of old cobblers!
The problem for me is that others may believe it, because it's been written and presented on the WWW.

I see examples of this sort of thing all the time on the AMSAT-BB, especially with regard to antennas and pointing accuracy.
All I have to say is be careful what you believe in! There's a lot of rubbish out there.

2695. Nit picking or myth busting ? ... depends on your point of view.

Yahoo group: eu-amsat
Date: 2009-08-15 20:45:23 UTC
From: John Hackett
Topic: 2695 Message: 2695

Group,
As an AO-7 afficiondo of many years, I read with interest the following sentence from ELECTRONICS WEEKLY in regard to Amsat-UK's proposed FUNCUBE.

Quote.

UK radio amateurs put together Oscar 7, which is still operating after 27 years in orbit.

End of quote.

Actually, AO-7 was put together by a group of amateurs from Germany, Canada, The United States and Australia.

Amsat-DL were responsible for the mode-B transponder, The Codestore unit was/is Canadian. The RTTY telemetry was provided by an Australian group and the mode-S beacon (which was never switched on) was provided by The San Bernardino Microwave Society (California).

My information did *NOT* come from Amsat, it came *DIRECTLY* from Jan King, the AO-7 project manager, to myself and GM1SXX.

As I mentioned once before, some of the the information published in the 1974 Amsat Newsletter is *NOT* correct either. Hardware changes were made while the newsletter was going to press.

Myself and GM1SXX deduced and confirmed this by live telemetry collection several years ago and subsequently contacted Jan King directly.

My point?. It would be an advantage if Amsat-NA and Amsat-UK were to check the information they endorse *BEFORE* publication because false information *WILL* come back and bite them in the bum.

As a point of interest, I still have the original codes for commanding AO-7 but together with the other stations concerned it was decided that an attempt to command the satellite now, with the electronicsin the state they are, might well
do more harm than good ... so we drcided to leave well alone - based on the assumtion that half a satellite (sunlit only) is better than none.

73 John. <la2qaa@...>

NB.

AO-7 has now been in orbit for over 35 years, not 27. (It was launched on November the 15th, 1974).

2009 minus 1974 = 27 ???? ... but hey!, what's an 8 year error among friends? ... it's only 'education' ... with a bit of misinformation thrown in.

>
> It's simply not true... neither half of the statement, no matter how you consider it. Sorry, but it's total rubbish in fact.

Not true? could be! but if i take a 5000 km satellite path at the equator it's cover about 70 latitude degrees about 19% of the total
earth circumference measured at the equator. At the polar circle limit around 67deg of latitude for the same 5000km satellite path will
cover near 180 latitude degrees 50% of the polar circle earth circumference measured at 67deg of latitude making possible an other side of
the world contact.

If i want to have a WAC certificate on the leo's and if my last continent is on the more than 180 degrees point from my location at the
equator i will probably never be able to reach it but if my location is at a latitude of 67degres the same 180 degrees will make this other
continent available. (Assuming the two distant point are on the same latitude)

When i wrote " the same satellite footprint will cover more distance" that's i was meaning at the equator a 5000 km radius cover about 19%
of the earth circumference and at the polar circle about 180 degrees. Could be i should have wrote cover more polar circle degrees than
equatorial degrees? but the essence of my tread was "Some have reported having hard time with DX QSO'S due to their location on the planet
i think the south pacific Australia and New Zeland region is the less favourable spot as they are surrounded by oceans and the south pole."
And we all know the south solar pole is not covering a lot of counties.

Also i also wrote "This does not diminish this quite impressive edge QSO" meaning it is not related to the point to point distance but to
the two points location on the planet again "due to their location on the planet"

That's how you should consider it.. just interpreting it in the first place as WW lies is also as counter productive " as some people
really do talk a load of old cobblers! The problem for me is that others may believe it,

because it's been written and
presented on the WWW." Could be asking for an explanation before telling some are telling lies will be more useful and you are right it is
this exact AMSAT-BB trend i fight for asking to have sound written guide-lines.

When you wrote "I'm certainly confused over what "As the earth circumference shrink towards the
poles the same satellite footprint will cover more distance might mean!" could be asking for explanations should be attempted in the first
place.

I am used to received "various commenting..." it is not all the readers who will be reluctant to propose and posted their ideas even if
they are not right. There is always a way to politely responding to others comments. It was one of the main problem when i start to get
involved on AMSAT-BB a lack of understanding toward those new-comers where some "senior" operators always answers back to them in a quite
rude way making them feeling cheap and twitts where they are only trying to tell what they understand.

The way you proposed your ideas Al will not be a great incentive for those who want to joigned EU AMSAT and i try as often as possible to
promote it.

Sincerely

From: Allan Copland
Topic: 2692 Message: 2698

Hi Group.

Let me clarify what I was trying to point out.

1) A satellite such as Oscar-7 in near-circular LEO has a virtually constant sized footprint... **no matter where it is*** above the Earth's surface.

2) The Earth's circumference for all intents and purposes is constant... but see #3!

3) The Earth has a *slight* equatorial bulge... and I mean slight!

4) The statement... "As the earth circumference shrink towards the poles the same satellite footprint will cover more distance."
...still makes no sense whatsoever.

In the inrterest of informing or educating people, the above statement (number 4) is just meaningless disinformation.

Thomas has hit the nail on the head by pointing to Mercator projection. Thanks Thomas, for pointing that out.

mercator is the basis of most commonly available maps... but other projections also exist).
Mercator is the projection that most people
know but like ALL projections, it has flaws.

The Mercator projection system projects a sphere onto a rectangular format, a cylindrical projection. As a result, gross distortions are introduced at the North and South extremes of the projection.
Perhaps this is where some of the confusion lies.

With Polar maps (remember those?) the main distortions tend toward equatorial.

See ...
http://en.wikipedia.org/wiki/Mercator_projection

But I'm sure most of the readers are aware of this anyway... hopefully? It's taught at school.. hopefully? At least it was when I was there. I have to confess to not attending school since the 70's, but even then I was taught that you can't map a sphere to a rectangle without serious compromise!

Mercator projection is only one of several ways that maps may be presented. There are others. and of course anyone who has used tracking software will have used at least one of them. Polar and Equidistant projection seem to be the favourites.

Remember the polar projection maps in 'The Satellite Experimenter's Handbook', used with the Oscarlocator and printed tables? Those are Polar oriented rather than equator oriented. The polar regions look very small on those maps! Antarctica is no longer so huge as on mercator maps.

Equidistant projection is often used in satellite trscking software as an altermative to mercator. For various reasons, it's easier to use. There are many other types of map projection available.

See http://en.wikipedia.org/wiki/Map_projection

for more info on various sorts of map projections.

For the real techies among the readers, please excuse my grossly over-simplified descriptions of map projections :-)

I just have one arrow in my basement that i was planning to bring at the summer condo in Fort Myers beach but as usual the day before
leaving (read the night before) i was testing it to only discover that i was hearing near nothing and the same results has been confirm at
the last field day!

As i'm a bit concern with antennas i never see any specs or instructions with my arrow stating that i have or should "TUNE" this antenna???

Is it a magical Wizard of Oz antenna where Tin Can is already factory tuned? I have to admit that i never pass the magical antenna to the
bird and i'm feeling it is probably something that i overlooked under the impression it was a Wizard of Oz magical antenna.

Some had try to copy it : http://www.g6lvb.com/HomebrewArrow.htm and they don't succeed it is the proof of the magic around this antenna
as the CLR-2 and the Super Gainer not to let a side the famous moonraker was where you just have to assemble them and bingo you are the
king of the monitor channel.

Seriously did any one ever tested this antenna? Eham even reported that some are even sleeping with the antenna "It has been in my attic
and now sits in the corner of my bedroom" I will have some hard time with my XYL trying to convince her to install the arrow in " the
corner of my bedroom"...

http://www.eham.net/reviews/detail/1613

Just to say the correct lenght of the elements and the performance are always right in the hands of the beholder:)

P.S It make's me remember some fishing stories

Hi Luc,

Hopefully I can put your mind at ease.

The arrow is indeed a magical wizard of Oz antenna, such as you describe, just like most other yagis. The element lengths on the Arrow don't appear to be adjustable (tuning a yagi involves altering the lengths of the elements), so the only other adjustment is to the antenna to feedline matching.

The Arrow does however use a Gamma match to provide proper matching (not tuning) of the antenna system to the feed-line. Ths should be adjusted for the best match or set as per the manufacturer's instructions. Thats the only adjustment you can make. Both of the yagis on the coomon boom have their own (separate) gamma feed systems, so will need individual adjustment.

Unless I'm badly mistaken, the Arrow comes with the elements pre-cut or swan to the correct length, with holes in the boom to fit them into.... so the only possible adjustment you can make is the shorting bars on the gamma-match feeds, so you can't tune it.

Altering the position of the Gamma bars is matching, not tuning.

I hope this answers your question.

73 Al.
GM1SXX

I don't own an Arrow antenna myself, I'm Scottish, too mean to spend money on radio aerials, so I make my own... but I have seen photos of an Arrow. It would hurt too much to spend all that money .... plus 26% in tax and import duty to *buy* an Arrow :-) Ouch!

Hello All

On this site I can see that the "Arrow"-antenna is constructed on a
wooden boom. This has the effect, that the reflectors and directors
are not connected together and to ground. So they are inactive and only
the dipoles are active. A very curious antenna, I think.

Hi group.

It's entirely possible to make yagi antennas at home, on non-conducting booms. Most antenna modelling software allows the user to choose between conductive (through-boom design) or non-conductive booms.

The centre point on a dipole... including those used as reflectors and directors in a yagi, should be at RF ground potential, so grounding them is permissible (and normal practice), but the element lengths differ between through-boom and insulated types, because of the presence of a conducting boom. Your software should be able to cope with both.

Rather than just slavishly copying commercial designs, it can be fun to use some antenna modelling software to modify an existing design, or to create a new one, and try it out using cheap materials such as ordinary timber booms and stiff wire or tubular elements. I often use copper microbore pipe for 70Cms and tubular aluminium from the DIY store for 2M.

There are many parameters to consider with a yagi and it's safe to say that all the parameters interact, but don't be put off. It is possible to make very acceptable yagis for HF-23Cms using cheap and readily available DIY shop type materials.

The boom material (conducting or insulating), means of attachment (through-boom or not) element lengths, element diameters, element spacings all interact in a yagi type parasitic antenna.

Your software can (and should) do all the hard work for you!

Quote

I agree with the above... except for this part....

"So they are inactive and only the dipoles are active."

This is not correct. The centre of the reflectors (driven) and directors of *any* yagi are effectively at RF ground potential ... they are at a currrent and not a voltage node), so it doesn't matter at all if they are grounded to the boom or not.

What can (and does) matter is that in an 'element through-metal-boom antenna' you need to correct the element lengths for the boom's presence.

All the elements are active in a wooden boom yagi design, just like in a conventional metal-boom design.

A wooden-boomed yagi behaves exactly like an all-metal through-boom yagi, so long as the appropriate correction is made to the element lengths to compensate for the lack of a

conducting boom.

What does matter but *only* in the case of a through-boom all-metal design, is that you correct the element lengths for the boom's presence. The presence, or otherwise, of an electrical path between the elements is completely irrelevant. Think RF and not DC.

Most of the yagi's I have made over the years have used wooden booms. They work just as well as commercially made metal boom models.

Oh, and if you *do* make a yagi with a wooden boom for outdoor use, please don't forget to varnish the boom with at least three coats of good-quality Yacht varnish to protect it from weather and water ingress. If you use bare wood outdoors, it won't last very long :-)

Don't believe me? Why not make some 'wooden' yagis yourself and *prove* to yourself that wooden boomed yagis work absolutely OK. There's plenty of free software available and the yagis can be made from cheap readily-available materials. Make your own yagis and have fun learning what works and what doesn't.

Yagimax is one such software...
http://www.simtel.net/product.php%5Bid%5D46509%5Bcid%5D147%5BSiteID%5Dsimtel.net

If you have space for larger designs, the DL6WU design is well respected.

The Internet is a rich source of material for DIY yagis (and other designs) for all bands. Go on, have some fun! Build your own.

IMHO all amateurs can express their opinions and
ARISS should at least remain a true international independant organization remaining an
open democratic and transparent group.

We can always find any sort of hidden agenda to someone but what Miles Mann WF1F wrote at
http://www.marexmg.org/fileshtml/arissreorg.html
is a very accute commenting especially "Prior to 2009, ARISS would say that its meetings
were open to the public and other clubs were
welcome to observer. In 2009 ARISS changed its open door policy to a closed-door policy.
The public is no longer allowed to attend any of
the meetings.and Now, only selected members of the AMSAT Corporation are allowed to present
Amateur radio project proposals to ARISS for
International Space Station.

The AMSAT Corporation has full control over the voting and the hardware selection process,
thus creating a monopoly on the International
Space station for Amateur Radio projects."

It looks like AMSAT-NA is desperately seeking for a jump start and they will now drag ARISS
with them as a way to boost them. With the
recent problems at AMSAT-NA and with a so poor management ARISS will be drag to the bottom
and the only one safety buoys who will remain
will be the other international ARISS members and group.

Miles has the right to express his opinions and as soon as some of them are in
contradiction with those of ARISS the usual AMSAT-NA way
came back in the form of personal attack made by the usual "Janitors".

With the so poor recent track record at AMSAT-NA they are searching by any means a way to
boost them as all other options are exhausted.
They are now attempting this new weird twist.

Hello Patrick

As I understood, there are both ways possible with the difference of the length of elements. You can correct me Al. It would be interresting to test, how my body influences the antenna if I hold it, the one with a wooden boom and the other with a aluminium boom (in German its also Aluminium). I would prefer the aluminium boom.

Yahoo group: eu-amsat
Date: 2009-08-18 16:39:44 UTC
From: John Hackett
Topic: 2707 Message: 2710

Folks,
As far as I can see nobody has mentioned that the Arrow aerial had
a wooden boom.

It was stated that an Arrow *CLONE* on Howard's website had a wooden boom - which it has.

That particular design was originally by Kent Britain in the 1980's but we used
them in the 1960's too - there wasn't too much aluminium in Sahara Desert in
those days ... and 'cast iron' (which there was an abundance of) doesn't lend itself to
booms designed to be held in your hand and waved frantically at the sky.

The comments were referring/comparing two quite different designs.

I can assure the group that what GM1SXX has stated *IS* correct.

Arrow - Elk - homebrew ... horses for courses.

I've built aerials (antennas, if you're a Yank) for more than 40 years but I also
own an Arrow - which, performs flawlessly for what it was designed to do.

(Waving a pointy stick at the sky).

Remember ... one shouldn't compare a Volkswagen Beetle to an Aston Martin DB
(David Baker) 4. They're designed to do different things.

2711. Aerials.

Yahoo group: eu-amsat
Date: 2009-08-18 17:18:36 UTC
From: John Hackett
Topic: 2711 Message: 2711

Folks,
On the subject of aerials ...

Forward gain (along the boresight) of a beam is one thing but in satellite operation equally as important are the horizontal and vertical beamwidths, particularly at the half power points.

Generally speaking, a 3 element beam, has a 60 degree beamwidth, a 10 element beam has a 30 degree beamwidth ... but NO !!!, a 20 element beam *DOESN'T* have a 15 degree beamwidth - (but a parabol does).

Simply stated, this means - if your EIRP is 100w along the boresight, with a 3 element beam, you will still be radiating 50w at half of the beamwidth - (the 3dB points) - at 30 degrees - half of 60 - (sometimes I amaze! myself)

The vertical radiation angle is more often than not twice that of the horizontal beamwidth - (depending on the number of elements).

A transmitting and a receiving aerial are reciprocal in the above respect.

REMEMBER !!! ... when the satellite comes up over the horizon it's somewhere between 1500 and 3000 Km distant. When it's at TCA (time of closest approach) it's about 800 - 1000km distant (depending on the orbit).

You *DO* regulate your power within the horizontal and vertical half power points don't you? ... no, I didn't think! so ... but you should.

Remember too that the actual pattern plot of your beam does *NOT* resemble those nice computer generated patterns - in reality, it looks like a barbed wire fence gone mad!. Even hills 3km away affect the pattern.

For the umpteenth time ... circular polarisation is only circular along the boresight of most aerials (with only two exceptions) accurately cinstructed Lindenblads and quadrifilar helices.

Well, that of course is an interesting question to which no one yet knows the answer.

One of the main issues with all the space stations to date is that they are built around an active core... and as new parts are being added, the station's core becomes increasingly dated.

The Russians realised this and have come up with a different strategy... OPSEK, a passive core thats nothing more than a 6 port docking adaptor. Since it's passive, there's little to wear out apart from of course the docking systems. To date, the Russian designed docking systems have been pretty reliable.

Salyut, MIR and ISS were all built around a Russian core with an axial and 4 radial docking ports. When the useful life of the core is expired. the station becomes unfit for use. So although the ISS has perfactly serviceable hardware attached to the core, and will have when it is finally scrapped, the remaining life of the core determines the overall life for the station. Clearly this is a badly flawed design.

My making the core passive rather than active, with no water and air regeneration, electrical or other essential services, a space station could be used for a *far* longer time, and modules replaced as they wore out.

LA2QAA and myself wrote a short article on the possible future for space stations (and one facet of amateur radio in space).

Should you be interested, you can read it at

I have a copy of the manual at...
http://www.observations.biz/MANUALS/KLM/KLM-2M-22C.pdf

I hope that helps. If not, you may just have to make a guess :-)

From: John Hackett
Topic: 2718 Message: 2718

Group,
Once again, it seems that some of the Amsat-bb members have
apparently no clue as to what goes on outside America.

The future of the ISS, discussion ...

It does appear that some of the contributors are oblivious to the fact that
The Russians have already informed NASA that they (The Russians) intend
to pull the plug, to concentrate on their own space station ... more than
likely backed by The European Space Agency.

News and comments at the end of the following website. ...

<http://www.russianspaceweb.com/opsek.html>

GM1SXX and myself wrote an article on this very subject some time ago.

Those interested may read it at ...

<http://www.observations.biz/Joint_Observations/Joint_observations_07_07_2009.htm>

Somebody commented - "It's politics" ... that part is true, it's mainly a combination
of politics and money.

My own personal opinion is that the Russians don't fancy the idea of footing the bill
alone, and prefer to do things their own way.

Hi group.

You may be interested to know that this group has been running for just over five years, since June 2004 in fact, and membership currently stands at 156 persons.

This is pretty good, considering that when Makis SV1BSX, John LA2QAA and myself GM1SXX set it up, had no idea at the time if there would be any real need for, or interest in, creating such a group.

The reason I believe the group has been so successful is that it is a springboard for new ideas, ideas that in general would probably be 'shot down in flames' on the AMSAT-BB site.

As such, it provides a place where original ideas can flourish.

You guys have made this site the success that it is, so we encourage you to make it an even bigger success by posting to it more often and not sitting on the sidelines. It's your group, so make use of it.

If you have not posted to the group, please consider doing so. satellite people are always curious about what other enthusiasts are interested in and what they are doing, so if you just lurk on the sidelines, please consider posting to the group and let us know YOUR interests.

Remember too that you can post photos, web links or files that may be of interest to fellow amateur satellite emthusiasts.

If there is anything you feel is missing from the reflector or something new we could include, please ask. You can contact either John or myself Al, via the normal email routes.

Finally, if you know of a fellow radio amateur who has an intetest in satellites and is not a member of this group, please invite them to join.

Thanks again for making this group a success, and over to you!

73 AL. and John.

HI Al

I already have the manual but i will have to recheck the measurements one element pre drilled hole is missing and the only one place he can
be it's in the overlap boom sections where the 2 section are bolted together. First time i come up with this kind of problem? The overall
total boom length is correct?

Thank's for your offer

>

Well here's my 2p worth.

The polarisation of a satellite signal as seen on the ground varies with time. One simple fact...The signal on the ground is *virtually never* true CP.

The ability to switch between V & H is useful to cope with these polarisation changes. Some people seem to prefer to stick up a cp antenna and hope it works well. I'd say... experiment. Try both and report back! V, H, CP... try em all. you may get a surprise. I did!
I eventually went with linear.

Hello Jon

It is worth, especially for AO-51. One Repeater works LHCP and the other RHCP in downlink.

I have always switched to a 11 element vertical yagi from Cushcraft. If the signal drops down, I switch to my 14 turn helix RHCP (old AO-10/13 days). Then, and only then, is RHCP better and the signal rises up.

Hello group,
My two Rubles worth ...

Personally, I find that switchable elliptical polarisation works best for LEO's but of course it depends on which satellite and where you are situated - so there's no 'one' correct answer.

Like GM1SXX spaketh ... experiment!, you're radio amateurs.

For circular polarisation see my recent post on the reflector and also have a look at the OBSERVATIONS website ... The case for circular polarisation article by 'The Twisted Pair' ... (aka LA2QAA & GM1SXX).

2725. Re: Yagi Antenna Construction

Yahoo group: eu-amsat
Date: 2009-08-21 09:03:35 UTC
From: allan_gm1sxx
Topic: 2721 Message: 2725

Hi group.

Ever watched "The Arrow Dance'? If you have, and you understand why it's needed, you are already more than smart enough to skip this message.

FACT. No matter what sort of antenna system is placed on a satellite, the polarisation as seen on the ground is going to be different.

The reasons for that are many and include Faraday rotation, scintillation and the effects of the ionosphere (yes the ionosphere) on the signals. Do please remember that a satellite signal traverses the ionosphere not once, but twice, and contrary to what I often read in some places, it *does* affect the signal.

There is another thing to consider. Although many, if not most, satellites carry CP antennas, the main advangage of doing so appears to be to provide a larger range of options for the ground segment.

This is one strong reason why MILSATs use CP. It gives a greater range of groundstation antenna options. There is quite a lot of freely available information re this, so I won't expand on the theme. Do your own research.

The *theoretical* worst-case scenario for a CP bird with a CP antenna on the ground, is if the polarisation at one end of the link is of the wrong sense. This only really holds entirely true if both satellite and groundstation antennae are accurately pointed at each other, a situation that is vanishingly rare.

In a real-world situation, the satellite is *almost never* accurately pointed at you, and even if it were, it would only be for a fleeting moment of time as you passed through it's boresight. Only then *could* there be any semblance of a true CP signal .. and that is before faraday rotation and scintillation and other unwanted effects are considered. You can watch this in action with your own eyes, every time you see 'The Arrow Dance'.

So...
1)all satellites are not the same. Some are CP, some not
2) Only Molniyas are accurately pointed (but these can be discounted.. we have none now)
3) A satellite signal as seen on the ground only can be CP when viewed down the boresight (a vanishingly rare and fleeting situation).

There is no single solution to the problem. The simple reality is that the signal as seen on the ground is likely to be slant-polarised.

To recap..
As noted above, there are two main reasons for this
1) Pointing error (mostly at the satellite end!)
2) The Ionosphere

I'll ask again... Have you watched the 'Arrow dance'? If so, then you have *seen* the effects I have described above with you own eyes. Even if you don't believe me..... you

should need no more proof!
It's your eyes after all.

I always find the 'Arrow dance' amusing, because it proves once and for all that the polarisation most certainly does not remain constant throughout a pass. For satellites on LEO it can and does change many times during a pass.

ALL antenna types represent a compromise with regard to polarisation which is why there is no single solution... and the same questions will probably be asked forever:-)

Molniya birds are a special case because a Molniya bird *can* be accurately pointed (at a spot) on the Earth. Ignoring Faraday rotation, scintillation and other ionospheric effects, you can then (in theory at least) at that illuminated spot- which can be fairly large, have a true CP-CP link. The reality is that you do still have ionospheric effects taking place to upset the 'CP dream'.

The reality, in the past, with AO10 & 13, was that even Molniyas were deliberately off-pointed for operational reasons, for a lot of the time. Power generation is but one of those reasons.

Hopefully some readers can now understand that satellite antenna systems are a problem with multiple solutions. No antenna single system is 'best'. They are *all* a compromise.

Next time you wonder which antenna is 'best', just remember those old dance steps. At least with LA2QAA's suggestion, you have a choice.
Single linearly polarised yagis are cheaper :-)

If anyone remembers the old Polarphasor, it was an ingenious way to alter the polarisation of a pair of yagis using a zig-zag printed-circuit delay line connected to a rotary switch. It was a useful item for the shack but I have not seen one in years. perhaps it's time for it to be 'reinvented' so we can optimise our polariation manually.
It does the electrical equivalent of the arrow dance. I rather liked it. It was a good piece of kit.

With AO-51 in the V/S configuration i ended up with a linear WI-FI yagi on 2.4ghz. It was this antenna who exhibits the lesser fades as BBQ
grills, patch antenna, helix gives so deep fades that the signal goes way down below noise level. The only one fades who remain are those
produce by the antenna nulls at the satellite.

Hello Group,
The IC9100 looks nice but I couldn't even afford a coax connector
for it - let alone the transmission line.

I do own a couple of Icom's though. A 22 year old IC-730 - but it hasn't been switched on
for nearly 3 years now.

I also own a brand spanking new IC-E92D (with D-Star) - which surely must rate
as the fiasco of the century (?).

I got if for a kiss and a song bur having owned it for a couple of months I can say that I
certainly wouldn't waste my money on one. Built like a brick sh*thouse and
waterproof to boot - but I don't know many Hams in the habit of chucking their Japanese
wakky takky's in a lake ... or using them to hammer 6" nails into 2 x 4's.

(There's bound to be at least one! exception.....GM1SXX).

I do OK with my 22 years old FT-290 and homebrew amp on 2m. For 70cm I used a 'modern'
(only 8 years old) Kenwood TR-851E ... but who cares! ... as long as they
do the job. I'm too old to be wondering if mine's bigger than yours ... doesn't matter much
these days as long as it does it's primary function ... the radio too!.

2733. PICOPONDER on demo at JARL Tokyo

Yahoo group: eu-amsat
Date: 2009-08-23 13:34:37 UTC
From: allan_gm1sxx
Topic: 2733 Message: 2733

Hi group,

As some members may know, William, PE1RAH is in Japan to showcase his mode U/V PICOPONDER. This must be the smallest linear transponder around, having been sized for CUBESAT use. Despite it's diminutive size, the transponder is fairly flexible and has a 200mw PEP output, making it ideal for a CUBESAT's limited power budget. The transponder was built in SMT using reflow soldering.

William has made some videos of the transponder under test and has kindly sent some photos from Japan where he seems to be having a good old time.

You can watch the movies and see the photos at...
http://www.pe1rah.observations.biz/index.htm

William also got a look at ICOM's new flagship radio, the IC-9100 and I've included a couple of photos of this rather nice, but very expensive, new radio.

Guessing on the "Silent majority" opinion is and will always be very tricky but what's this "silent majority" is waiting for and behind
it's the next HEO namely called Eagle by AMSAT-NA but scapped due to numerous issues at AMSAT-NA.

If each time someone voice an opinion who is not what someone else opinion it is not appropriate to answer back using this kind of language
" but I believe you have hit the nail on the head." "and not what a bunch of keyboard-jocky shack-potato's waste everyone's time whinnning
about..." If you can only whine, then get out of the way..." And the ankle-bitters and whinning shack-potatoes win and will
go on and on about how "they shoulda, coulda, woulda done better"... BUT, nothing was accomplished..."

Bob and Jerry we are in 2009 and internet is now a part of our life. It is not only the AMSAT journal who is now the only one sources of
information. The context change at AMSAT-NA as soon as people start to comment and voices their opinions mainly through the internet but
mentalities at AMSAT-NA never change.

You are right when you wrote "And since "they" are the ones spending 12-16 hours a day for years to BUILD it, then it is only human nature that they will build what THEY believe in" But if you only work for your own satisfaction
ignoring others wishes and ideas you are going to hit a wall one day or another. Is it possible that actual AMSAT-NA problems come from
this kind of attitude? I do what i want if you are not with me you are against me and i will ignore you... What happen when the crowds
start to voices their opinions " the ones spending 12-16 hours a day for years to BUILD it"

start to fight back the pressure making
ultimatum "I will resign and try to do it if you can"

"A life lived in fear is a life half lived."

Is ITAR is really what stops the cooperation between AMSAT-NA and AMSAT-DL? even if both sign a cooperation agreement many years prior to
this ITAR illusion? Could be if AMSAT-NA in the past was so aware of the "silent majority" desires they probably choose to go by theses
desires instead of those of the few builders!

Trying to silence those who freely voices their opinions telling them "If you can only whine, then get out of the way..." is surely a way
to promote the silent majority to express their opinions... As i said guessing on the "Silent majority" opinion is and will always be very
tricky" mine is as good as yours and as written " The total number of dissenting opinions at least on the -bb have been few" just note the
" number of dissenting opinions" and "have been few"" you will have the AMSAT-NA trend no matter what theses dissenting opinions are we
just have to consider them as " have been few" as the validity and the right to express an opinion in AMSAT-NA is related to a math
figures? In a sense they are right just ask any marketing firm about their client satisfaction, when they are satisfied they will tell to 3
others but when they are not satisfied they will tell to 10 others. Again it's very tricky to guess on the silent majority opinion!!

As Robert wrote "based on your logic no criticism whatsoever is warranted." Yes it is exactly what we all seen here from AMSAT-NA and by
some of their blinded suppporters.

Jack also summarized the situation quite well even it was not his goal:

"The question is, what about those who left AMSAT or no longer pay due because they also - silently - are voting with thier talents, skills, and money which are not
available... It is no problem to have a group which is in - at least tacit -
agreement, just force the others out or ignore them until they leave."

Bingo! you put the finger on the plea but IMHO AMSAT-NA should change his mission "Its goal was to foster Amateur Radio's participation in
space research and communication. AMSAT was founded to continue the efforts, begun in 1961, by Project OSCAR" to read "Its goal is to
foster Amateur Radio's education and information and cooperation in space research and communication.AMSAT was founded to continue the
efforts, begun in 1961, by Project OSCAR and now carried by universities and colleges.

Just note the "cooperation" just read an excerpt about the 2001 International
Satellite Workshop sponsored by AMSAT-DL

"The closing day of the gathering was set aside for more-detailed
discussions on various aspects and strategies for future missions.
Representatives of nine AMSAT organizations, as well as of various
space business groups, the European Space Agency and Arianespace
attended the gathering."

Just return to the basics!!!

Could be at the next AMSAT-NA Space Symposium in October someone can make a proposal? It will at least take out a lot of pressure for the
BOD who is still without a president and it will make possible to support the viable actual options eg: P3E by AMSAT-DL and support ARISS
in their mission including the Suit/Box sat. This change in the goal will give the necessary slack to regroup and reform AMSAT-NA towards a
more realistic mission as it is obvious that all the resources human and funding are now exhausted regarding an HEO and probably also for
any other cube sats as it is no more AMSAT-NA who is the leader in the amateur satellite world.

It's not new look what happen in 2004:

"AMSAT at the Nanosat-3 Design Review

NASA and the AFRL had a review/poster session with the University Nanosat 3 team of universities just a few weeks ago. This was held near
the Dulles Airport in the DC area. All 13 universities were in attendance. We also had a significant contingent of AMSAT leadership there
including Tom Clark, W3IWI, Art Feller, W4ART, Perry Klein, W3PK, Mark Kanawati, N4TPY and Frank Bauer, KA3HDO. They provided significant
guidance to the university students, the professors and to the NASA and AFRL members in attendance. There was a lot of AMSAT hardware
development knowledge in that room. The AMSAT team members had some substantial one-on-one dialogue with the university teams on frequency
coordination, dos and don'ts of spacecraft design, etc."

Check also this
http://www.rsgb.org/spectrumforum/pdfs/minutes/june07/Radio_Amateurs_Mars.pdf

They surely can help providing expertise and counselling to all the various group an universities who are projecting to put something in
orbit. Their communication expertise will and still is one of their greatest assets. It is by this asset they will be able to survive and
can have the best opportunity to still be able to fly a transponder (See PE1RAH William Leijenaar small transponder project) in orbit. Also
maintaining their web site can also be a nodal point of amateur satellite expertise who can be promoted to be "The expertise place on the
internet".

Failure is not an option but targetting any launch or satellite construction is now out of reach and will only lead to even more failure
and deception. It is better to move in one direction than remaining stand still.

2735. A rocket propellant named ALICE!

Yahoo group: eu-amsat
Date: 2009-08-24 13:59:25 UTC
From: allan_gm1sxx
Topic: 2735 Message: 2735

This one is unusual, a rocket propellant made from powdered aluminium and water ice slush... AL-ICE!
It's a material with the consistency of toothpaste that's chilled down to form a solid before launch. Weird, but very interesting.

Quote

"based on your logic no criticism whatsoever is warranted." Yes it is
exactly what we all seen here from AMSAT-NA and by
some of their blinded supporter"

End of quote

Just look around some AMSAT-BB actual and past BOD members and you will have a fairly good idea of this "lots of private-off-BB email
agreement." I.m also receiving a lot of commenting coming from the EU AMSAT reflector and even some on the air! It's not a question of who
is supporting who but how to make a satellite association running who is actually not working as per nominal parameters.

AMSAT-NA is unable to have any kind of evolution as it's core members are always the same promoting always the same ideas to a point they
are and will be more and more unable to attract new officers and volunteers.

They are not even taking any lessons learn from the past. There is nothing to be ashamed to be stupid but willingly accepting to remain
stupid is.

2738. APOLOGY.

Yahoo group: eu-amsat
Date: 2009-08-25 07:46:42 UTC
From: John Hackett
Topic: 2738 Message: 2738

Group,
It has been brought to my attention that some of my remarks
can sometimes appear to be both crude and offensive to some people.

For this I apologise - and will attempt to tone down the 'Manchester slang'
in future.

Guilty as charged - I apologise.

Yahoo group: eu-amsat
Date: 2009-08-27 18:59:54 UTC
From: jon.eyre
Topic: 2740 Message: 2740

Hi all, i finally had a chance to test my 2x5element yagi today with some great results on AO-7. I had a solid downlink on the pass from horizon to horizon. When switching between my 4ele Tonna and the 2x5ele DK7ZB there was a remarkable difference. I've uploaded a few photo's there in the photo's section under G7TZZ.
Now i know it works i can start on the 2x10ele for 70cms. I'll keep you updated.

2741. Interesting satellite URL

Yahoo group: eu-amsat
Date: 2009-08-30 13:51:30 UTC
From: allan_gm1sxx
Topic: 2741 Message: 2741

Hi Group.

While idly wasting time today surfing the web, I happened across this link.

http://ilrs.gsfc.nasa.gov/

It's *not* amateur satellite related but may be of interest to some members of the group. Some of these objects are good visual targets so can be quite eassily seen in the night sky (away from streetlights!) , especially the geodetic birds Ajaisai (Hydrangea) plus Lageos 1 & 2 which carry LASER retro-reflectors. They backscatter light when sunlit with a flashing pattern rather like a disco mirrorball, so can be fun to look for.

Ajaisai was launched along with JAS-1, AKA Fuji Oscar 12 on the 12th August 1986 into high 'LEO', so this is an Amateur satellite ralated message, after all :-)

Visual observing can be quite addictive, so don't say I didn't warn you all. The Iridium birds also make for good visual targets.

2742. PstRotator - Software for antenna rotators

Yahoo group: eu-amsat
Date: 2009-08-31 16:23:19 UTC
From: yo3dmu
Topic: 2742 Message: 2742

Hello,
I hope somebody will find usefull this program named "PstRotator"
http://www.qsl.net/yo3dmu/index_Page346.htm
Working with a lot of antenna rotator controllers (Prosistel "D" and "C", RT-21 Green Heron, DCU1 HyGain, RC1 MDS, Rotor-EZ Idiom Press, Yaesu Az and Yaesu Az/El GS-232A and GS-232B, M2 RC2800, AlfaSpid RAK Az and RAS Az/El, Easycomm, ST3 Fox Delta, Endeavour Electronics AutoTracker, ZL1BPU, EGIS, and Creative RAC825), provides automating tracking using programs like WXtrack, WinOrbit, Orbitron, Nova for Windows, Sat_Explorer,SatPC32, WSJT, VQLog, TACLog, Z-Track, GJTracker, EME System, Trak_SM.
The PstRotator program is free. Please try and send me some feedback.

Voicing an opinion is really " cruising for reactions" I think not or theses opinions are probably exposing something who should not be
disclose fearing the membership/sponsored reactions?

>
> rather than
> analyze telemetry, plan schedules, maintain webpages, solder circuit boards,
> mail ballots, test batteries, process renewals, inquire about new
> opportunities, mentor a beginner or a cubesat project, write an article,
> schedule an ARISS QSO, etc?

I don't remember having read anything about criticisms on the work done but on what some are thinking the next moves and orientation should
be. I think it is more a second guessing problem than anything else.
Stage coach are always watching in your back just beware...

> I know AMSAT has had it's issues over it's long history, and we are all
> disappointed that HEOs seem to be almost out of reach for us now. We are all

> building spacecraft on hobby store budgets, and getting all past our
> benefactor launch agency trials and schedules.

If "HEOs seem to be almost out of reach for us now" what we should do next? no more false illusions about geo sat's and so on just get back
on earth and focused on how to help P3E and our German friend.

> We have also learned from
> our mistakes,

Is it not natural to try to remember our past mistakes to avoid them in future?

> it is time to move ahead. Our officers and our BOD is
> almost entirely different from just 5 years ago.

Is this will carry any new ideas even if the names are changing? I think not as the closed AMSAT-NA BOD circle is still hovering above.

>
> If a member has a problem with or suggestion for how a volunteer is doing
> their job, contact them through the website
>
Some are trying but they don't succeed AMSAT-NA is not like your local ham club where you can see your partners each week end. It was a
time where this "club" spirit was there and it give's AO-40 and Echo.

Aside of a HEO sat what's remain next? Cubes? and Arisat a 6 scrabble point word! and ISS? yes we all know there is a cross band repeater
up there resting on the wall !!

Is it possible to let the paying members operating the sat's without always feeling bad because they are not member of the president club
or as they don' t donate much or just they are unable or not interested to be a volunteer?

When you are watching a movie even if all the attendance want's to help all at the same time the guy who play with the film reel there will

not be enough room to let all of them go in.

If the pressure is too high it is probably an indication of a communication problem?, Not listening or just standing by our ideas will just

increased the complaining factor.

P.S. Success and achievement are the criticisms antidote and a perverse man stirs up dissension, and a gossip separates close friends

As Bruce wrote "It is my impression that the board members do not share this view" and "Instead, we should make the best of
opportunities in LEO that might support our future work in HEO, MEO,or wherever." as articulate his text is, he's assuming something that i
understand as 1-Short term, medium and long term objectives but as far as i know there is none written or planned on paper all is based on
Target of Opportunity lets called that a short term vision. In fact there is nothing wrong with that but again what about the long term?

If money is a key factor how as a group of satellite communicators can we reach the long term one? "We all want a HEO amateur communication
satellite in orbit, some of us because we've never had that experience, others because it is our fondest memory of AMSAT operations" lets
say a HEO is the long term objective and as Domenico wrote " Nobody has donated a launch for free or about for free on HEO except
ESA for OSCAR-10 OSCAR-13 and AO40 upon political strategy conducted mostly by AMSAT-DL and this is why we must pull for P3E" There is room
for short and medium term projects but putting aside the long term will only put AMSAT-NA on a side track forcing them to reevaluate their
mission as i wrote in another post.

In the mean time i all invite you Sul terrazzo di I8CVS on
http://video.google.com/videoplay?docid=8026221200764903522#

The digipeat APRS/text signal on multiple LEO'S is could be an alternative solution to a HEO but i will go a bit further and is it possible
to have DSTAR FM transponder on multiple LEO'S? With the new small size transponder made by William PE1RAH it will be something to
investigate. DSTAR can even send APRS data D-PRS and digital audio in the same transmission.

Do not forget that any analog FM repeater which does not filter CTCSS tone (audio taken at the discriminator directly) can transmit D-Star
signal.

Since my first experience with DSTAR i firmly believe a small cube sat will be soon be possible and with the fabulous linking capabilities
of DSTAR communication protocole it will also be possible to have of some sort of intersatellite linking system.

Remain to see how to have a wide FM transponder.

As DSTAR is quite in advance in Japan i will not be surprised to see something coming out there. With the new JAXA H-II transfer vehicule
did we overlooked a launch opportunity? again our Japanese friends seems to be quite impress with William pico transponder! did they have
something in mind?

Here is some link of interest.

http://www.qsl.net/pe1rah/HAMSAT-info.htm
http://www.qsl.net/pe1rah/
http://www.pe1rah.observations.biz/
http://www.aprs-is.net/
http://www.jaxa.jp/projects/rockets/h2a/index_e.html
http://www.jaxa.jp/projects/rockets/htv/index_e.html

P.S. I am looking for someone with DSTAR capabilities to try some DSTAR satellite transmission as the AO-27 first DSTAR test in 2007. I
already have Robin AA4RC in my urcall list and i can see his amsat.org text message passing in my screen!!! Just put my call sign in your
urcall list the next step is to find a common footprint. Just go on
http://www.ao27.org/AO27/index.shtml at the bottom of the page you will
have all you need to program your DSTAR radio parameters.

SSTV text chat and file transfer is also possible on DSTAR too.

Hi Dave

It is 2253 edt and i just came back from a ham dealer with the Icom DSTAR VHF and controller unit to switch one of our analog club machine to DSTAR system. With the long labor day week end i will rearrange my setup for
DSTAR.

for sept 5 here is the TEPR time who match a mutual window between us.

Time (UTC) Mode

Sat Sep 5 17:27:37 2009 Digital Med
Sat Sep 5 17:27:57 2009 Analogue Med
Sat Sep 5 17:34:57 2009 Digital Med
Sat Sep 5 17:35:57 2009 OFF

Sat Sep 5 19:08:25 2009 Digital Med
Sat Sep 5 19:08:45 2009 Analogue Med
Sat Sep 5 19:15:45 2009 Digital Med
Sat Sep 5 19:16:45 2009 OFF

Nothing for the 6 and i will check for the 7 later. I will be there on both pass.

2751. RE: [eu-amsat] DSTAR on AO-27

Yahoo group: eu-amsat
Date: 2009-09-05 18:28:03 UTC
From: John Hackett
Topic: 2750 Message: 2751

Hi Luc,
I have an IC-E92D D-Star radio but have little or no use for it.

Unfortunately, AO-27 is never switched on in range of my QTH which is also
500km from the only D-Star repeater in Norway - so D-Star is a non-starter
here.

It will be interesting to see if the Oufti D-Star satellite becomes a reality.

<http://www.leodium.ulg.ac.be/cmsms/index.php?page=in-english>

One can of course use Dan's D-RATS program but then one may as well just
use Echolink or CQ100 if one wants to communicate via the internet ... or MSN,
of course.

I was told that D-Star was only welcome by special schedule on AO-51 but I seriously doubt
if there would be enough experimenters to warrant a request.

I didn't bother to enquire about D-Star on VO-52 because I was severely flamed
for even daring to suggest such a thing.

Like Dylan said in the 60's ... "the times they are a-changing".

How was the doppler on AO-27 ??.

Subject: [eu-amsat] DSTAR on AO-27

A quick test on the 1330 pass using DSTAR was successful i was able to hear my downlink
with my call sign data Q5 with a clear crisp audio

as good as the terrestrial DSTAR audio. But no one else seems to be on at that time.

Hi John

Don't discard your IC-E92D yet for your concern on DSTAR operation just have a look at the AO-27 control operator invitation.

"The AO-27 Control Operators fully support and encourage the use of D-Star via Satellite on AO-27.

A shout goes out to ICOM for creating Radios for this Fun new Amateur mode of operation. Without their radios we could not have made this
contact.

- Michael
N3UC
AO-27 Control Operator"

Yes times are changing and like it or not the internet is now a part of our life just look how the text messaging is raging on cell phones
and MSM is a way of life. My teenager niece use to know my son broke with his girlfriend before he decided to make us aware of it...

It is a mater of time for DSTAR to appears on amateur satellite. For this morning pass i was alone as Dave got a very low pass. Doppler is
really an issue with 5 khz step the first AO-27 test in 2007 also experience the same issues with doppler and here what they wrote about
it:

"The D-Star signal would decode out to about 1.5 KHz in frequency error. The IC-2820 would only tune on 5 KHz spacing (the 6.25 KHz
channels did not fall in the right locations to help.) so at times we could not decode the digital signals."

I got the very same results but as soon as AO-27 get over 15 degrees i was able to have Q5 copy. Dave KB1PVH was there but he's having to
switch between memory channel as he was unable to have full duplex. Here i was using an ID-800H and an IC-2200H making possible to hear my
downlink with a noticeable delay in the voice due to the coding and decoding time.

The AO-27 web page http://www.ao27.org/AO27/index.shtml already give a lot of details for those who want to try DSTAR satellite
communication.

I will try to record a pass to show how the audio quality is lets say a no QRM QRN crystal clear audio.

I will try some test overnight as all the sat fleet is 100 % unused. For your VO-52 suggestion i was made aware that a lot of FM are done
over india an over south east Asia area i even heard a full pass direct FM QSO between to

US VHF station and they where Q5 most of the
time.

It ain't breaking anything but principles but there is some who will spend their entire life on them. like asking permission first to fart
in public.

Just hope for some more DSTAR on the birds soon "OUFTI-1 will be the first satellite to test the use of the D-STAR communication protocol
in space."

Excellent Luc,
Yes, it's a real pity that AO-27 is never on over my QTH.

I did read about the first D-Star QSO via satellite on AO-27 quite some time ago.

As for VO-52 ... Agreed !!! re the FM contacts over India and Asia.

Personally, I really don't !!! see the problem if one was to use D-Star with low power. People are always complaining that nobody is on the satellite anyway !!!.

I don't expect there would be a problem to passing D-Star through the VO-52 transponder ... (comments folks ???).

I have the gear here so I may as well give it a try!.

(Shoot me later).

From: allan_gm1sxx
Topic: 2756 Message: 2756

Hi group.

For newcomers to the group, I'd suggest a good place to start is in the Links section of this reflector where information can be found about satellites, orbital elements etc.

We *all* had to start somewhere and it's easy to forget the newcomers to the hobby. The Internet is a rich source of information on amateur satellites, so if you are reading this message, you already have accesss to a huge pool of information.

Remember that satellites are not always available. To know which ones are operational, the most up-to-date website without a doubt is that of DCarr/Bob Bruninga where many satellite users post their satellite availability status data.

You'll find this site at...
http://oscar.dcarr.org/

For the beginner, things can look rather daunting but if you need help, ask! Thats a large part of the reason that Mak, John and I set up this group.

If anyone in the group has a favourite satellite website thats not listed in the links, please add it.

Well done Thomas.

I hope others will follow suit (do the same) with their favourite satellite pages - if they're not already on the LINKS page.

It has been noted on the Amsat-bb that not everyone can follow slang or 'English' with the use of dielect. I'm also guilty of this. Therefore, please take into account the fact that English is often someone's second language, perhaps even their third - so an aside (note of translation) may be justified in certain cases.

Please use your judgement.

Thank you.

It is very difficult to write in a forum/group, if you don't see the
face of your partner and you don't hear the tone of his voice. With
respect and foresight it would be no problem to discuss themes. On the
AMSAT-BB I can often see, that the gentlemen hacks a text in their
keyboard without any brain. This is the reason, why many threads
degenerates.

2760. World space week

Yahoo group: eu-amsat
Date: 2009-09-08 06:07:04 UTC
From: Luc Leblanc
Topic: 2760 Message: 2760

Just to inform our AMSAT'S about this event! It will be a great media platform even more if ISS can be activated (Cross band repeater or
direct crew contact) during this period October 4 to 10.

What is World Space Week?

It is an international celebration of science and technology, and their contribution to the betterment of the human condition. The United
Nations General Assembly declared in 1999 that World Space Week will be held each year from October 4-10. These dates commemorate two
events:

* October 4, 1957 -- Launch of the first human-made Earth satellite, Sputnik 1, thus opening the way for space exploration
* October 10, 1967 - The signing of the Treaty on Principles Governing the Activites of States in the Exploration and Peaceful Uses of
Outer Space, including the Moon and Other Celestial Bodies.

Where and how is World Space Week celebrated?

It is open to all. Government agencies, industry, non-profit organizations, teachers, or even individuals can organize events to celebrate
space. This week is coordinated by the United Nations with the support of World Space Week Association and local coordinators in many
countries. Information on the many locations and countries that celebrate World Space Week can be found here.

What are the benefits of World Space Week?

* Educates people around the world about the benefits they receive from space
* Encourages greater use of space for sustainable economic development
* Demonstrates public support for space programs
* Excites children about learning and their future
* Promote institutions around the world that are involved in space
* Fosters international cooperation in space outreach and education

How can schools participate?

This event is ideal for teachers to promote student interest in science and math. A free Teacher's Activity Guide is available here. To
encourage participation, World Space Week Association gives various educational awards each year.

What can I do for World Space Week?

There are many ways to get involved:

* Volunteer for World Space Week Association
* Organize an event directly
* Help expand and coordinate World Space Week
* Encourage teachers and students to do space-related activities

2761. ITAR vs cooperation? or bull..dozer;)

Yahoo group: eu-amsat
Date: 2009-09-08 07:44:10 UTC
From: Luc Leblanc
Topic: 2761 Message: 2761

From AMSAT-NA web page who was updated: 23 Aug, 09

excerpt:

AMSAT Files CJ Requests with US State Department

"AMSAT's involvement with P3-E halted in 2006 due to concerns over possible ITAR violations."

Did anyone can explain why is it possible to say "AMSAT's involvement with P3-E halted in 2006 due to concerns over possible ITAR
violations" when i wrote about the memorandum (see below) on February 22 2007 as this paper has been signed prior to February 2007 in 2006?

Even if ITAR does not apply to information related to general scientific, mathematical or engineering principles that is commonly taught
in schools and colleges or information that is (legitimately) in the public domain. Nor does it apply to general marketing information or
basic system descriptions. (see below)

How the cooperation between AMSAT-NA and AMSAT-DL and AMSAT-UK stopped in 2006 when theses 3 gentlemens
Peter DB2OS for AMSAT-DL, Rick W2GPS for AMSAT-NA, Jim G3WGM for AMSAT-UK signed a memorandum of understanding and cooperation the same
very year??? They where surely not all out of their mind in 2006 or it is something else?

And why asking in January 2009 3 years later for a V'oluntary Disclosure' (Not a VOLUNARY a typo on the AMSAT web page) when most of the
amateur ham stuff is already in the public domain area? It is the same as if you are speeding and you go back to your police station 3
years later telling them you violate the law 3 years ago!!! or is it a way to justify their inaction refusing to get any blame?

What it is the most intriguing is the time frame and the fact they relate the cooperation stopping to ITAR in 2006 when they signed a
memorandum of understanding and cooperation at the same time? There is something here who does not added up.

Could be it is a way to try hiding their poor management past years record? or something we should ask to Gomez Addams or to his lovely
pale skin and a Gothic appearance wife Morticia Addams?

It is a lot of good questions to be ask at the next AMSAT-NA symposium Board of Directors general meeting in October?

Memorandum of Understanding between
AMSAT-DL, AMSAT-UK and AMSAT-NA

AMSAT-DL for the last five years has been building the P3-E spacecraft to be launched into a HEO and intended as a replacement for previous P3 satellites. It's purpose is to facilitate communication between radio-amateurs worldwide and at the same time to test and verify technologies and procedures needed for the P5-A mission to Mars. AMSAT-DL to this day has invested about 500,000 Euro into this project.

AMSAT-NA and AMSAT-UK wish to contribute to the P3-E project, primarily with the goal to have the launch of P3-E as early as possible in order to give to their respective members the use of the communication services provided by P3-E.

It is recognized that the capability of AMSAT-DL to raise funds limits the speed of the development of P3-E. In order to make a launch possible in 2008, AMSAT-DL has an immediate need of 40,000 Euro and an estimated need of ~200,000

Euro prior to the actual launch-date. AMSAT-NA and AMSAT-UK wish to help with the raising of these requirements by providing 30,000 Euro (AMSAT-NA) and 10,000 Euro (AMSAT-UK) in the near future. Furthermore, they wish to contribute

by raising additional funding as the actual launch arrangements materialize.

In order to achieve an effective cooperation in the funding effort and the construction and launching of P3-E, the following details to implement the cooperation are agreed:

1. The three AMSAT organizations will closely coordinate their activities and monitor progress of the project by frequent mutual consultations on the telephone. To this end the three parties will hold nominally a monthly telephone conference to review the status of the project and to identify problem areas. At this time the three organizations will be represented by Rick, Jim and Peter at these telephone-conferences.

2. According to need, the three organizations agree to hold sufficiently frequent meetings in person to review the project status. These meetings are assumed to be desirable with a frequency of 6-12 month between them.

3. It is understood by all three organizations that procuring a timely launch for P3-E is one of the bigger challenges of the project. AMSAT-DL is concentrating major efforts of procuring a launch with Arianespace, while AMSAT-NA is trying to develop a launch opportunity within the USA. All parties recognize that major progress in funding is contingent on a firm launch agreement. All parties further recognize that a timely construction and integration of P3-E is critically dependent on all parties giving highest priority to fulfilling their respective commitments.

4. All three organizations understand that funding progress is dependent on effective information dissemination worldwide. To this end the three organizations reiterate their mutual agreement that each organization can publish all P3-E related publications of the other two organizations in their respective public organs without special permission. Furthermore, each organization is free to prepare 'official' statements about the project, but these publications must be agreed with the project management of P3-E (AMSAT-

DL) prior to publication. Requests for agreement to publish will be sent to Peter (or another person chosen by him), who will use best efforts to respond within 7 days with an answer. With other publications by individual authors no such agreement is necessary provided that the context makes it is clear that the publication is not an official declaration by the project management or AMSAT-DL.

5. AMSAT-DL reiterates that the operational use of P3-E will be primarily to provide amateur radio communication services. But all parties also understand that the spacecraft is a dual service satellite, and that AMSAT-DL retains the right to occasionally reduce the provision of amateur radio services if work towards P5-A requires this. A-DL will use due diligence to minimize the impact of the P5-A requirements on the provision of amateur services.

For AMSAT-DL For AMSAT-NA For AMSAT-UK

Peter DB2OS Rick W2GPS J Jim G3WGM

Just check here for the proof

---

The ITAR public domain exclusions

§ 120.11 Public domain.
(a) Public domain means information
which is published and which is generally
accessible or available to the
public:
(1) Through sales at newsstands and
bookstores;
(2) Through subscriptions which are
available without restriction to any individual
who desires to obtain or purchase
the published information;
(3) Through second class mailing
privileges granted by the U.S. Government;
(4) At libraries open to the public or
from which the public can obtain documents;
(5) Through patents available at any
patent office;
(6) Through unlimited distribution at
a conference, meeting, seminar, trade
show or exhibition, generally accessible
to the public, in the United
States;
(7) Through public release (i.e., unlimited
distribution) in any form (e.g.,
not necessarily in published form) after
approval by the cognizant U.S. government

department or agency (see also
§ 125.4(b)(13) of this subchapter);
(8) Through fundamental research in
science and engineering at accredited
institutions of higher learning in the
U.S. where the resulting information is
ordinarily published and shared broadly
in the scientific community. Fundamental
research is defined to mean
basic and applied research in science
and engineering where the resulting information
is ordinarily published and
shared broadly within the scientific
community, as distinguished from research
the results of which are restricted
for proprietary reasons or specific
U.S. Government access and dissemination
controls. University research
will not be considered fundamental
research if:
(i) The University or its researchers
accept other restrictions on publication
of scientific and technical information
resulting from the project or
activity, or
(ii) The research is funded by the
U.S. Government and specific access
and dissemination controls protecting
information resulting from the research
are applicable.
(b) [Reserved]

PS. Did any one ever heard of any report about the memorandum and the way it works since 2006?

Hi group.

I asked that you add your favourite satellite links to the website.
I believe that posting satellite related links makes it more useful to newcomers, by having many relevant links in one place. Hopefully most of the AMSAT 'national' websites are now represented. If not, please feel free to add them, along with *any* other material you think is relevant, especially to newcomers.

Perhaps you know of a useful item, such as an article or perhaps a Powerpoint presentation for newecomers? This would also be most welcome. It's your group, so please contribute.

Hello Luc

I can't answer all your questons, please read the following article
on the AMSAT-DL homepage:
http://www.amsat-dl.org//index.php?option=com_content&task=view&id=173&Itemid=97

You can translate it with Google to your language. I hope, you can find
a few answers. For specific answers there are also any OM's around here,
I think.

Hi Group.

I've reorganised the links section to separate material in different categories to make life easier. I also hope to add a few more things of interest for the newcomer.

2766. My first DSTAR satellite transmission.

Yahoo group: eu-amsat
Date: 2009-09-08 19:48:40 UTC
From: Luc Leblanc
Topic: 2766 Message: 2766

I put the recording of my first DSTAR experience on satellite over the week end. Dave KB1PVH was there too trying this mode but we will
have to set another session to have a QSO. With the proper doppler correction it is possible to have an AOS to LOS QSO but the 500khz step
of the Icom radio does not give a full doppler correction making the downlink harder to decode at time. At TCA performance are quite good.

Radio used are in the first picture. ID-800H and IC-2200H

2767. Simon 2E0HTS and stuff for beginners

Yahoo group: eu-amsat
Date: 2009-09-10 10:14:20 UTC
From: allan_gm1sxx
Topic: 2767 Message: 2767

Hi folks,

I'd like to welcome Simon 2E0HTS to the group as a new member. Simon has posted some material on Youtube re satellites, and I liked one item so much that I pasted it (with his permission) into a very short introductory article aimed at newcomers to the hobby.

The movie shows Simon operating AO51 using a couple of radios and a tracking chart lashed to a hand held Arrow antenna. Attaboy!
It does a fair bit to dispel the persistent myth that you need very deep pockets to operate satellite.

If you are a newcomer, this one is specially for you. You can access the article by just going to www.observations.biz and clicking on the link...."For the newcomer. Working AO51. plus a movie."

You can also dowload VLC player, via an link on the page, should you need a player for MP4 video files.

Thanks Simon, and keep up the good work.

An interesting story, and for sure, the sun is in the Doldrums, but I think it's premature to predict the end of sunspots. After all, in real terms, we don't have much of a database to draw conclusions.
A statistician would probably laugh at the idea of infering so much from so little data.
The truth is that we don't really know enough about the sun's behaviour to predict the 'solar weather'. After all, we can't even do it properly for Earth's weather :-)

To all,

although we read news regarding the end of sunspots, I would like to emphasize that 40 meters propagation has been opened most every night.
I have been listening to European stations which are S9+ on my Yaesu FT-890. I also hear lots of Americans and Japaneses. Most of all them will meet or exceed the S9 level.
So, if that is the sun cycle lowest, I cannot wait for a peak.

73,
Luciano PT9KK

And NOAA suggest differently. See
http://www.swpc.noaa.gov/ftpdir/weekly/Predict.txt

OK, it'll probably be a poor cycle for radio amateurs compared to what previous cycles, but the solar cycle is still coming.

This part is intriguing

"NORAIS is bound for Columbus, the European space laboratory on the International Space Station.
This winter a specially constructed antennae will be brought to the ISS and fitted on the outside of Columbus.
From then on, the testing of NORAIS will start."

As the VHF and UHF antenna where not installed on the columbus module even after asking for money "ARISS-Europe renews the call for
donations to the IARU and AMSAT societies as well as to their members individually.A financial account has been opened by AMSAT Belgium.
Donators within the European Union will not have to pay any additional banking costs (beyond the costs of a national money transfer) if
they use the following international banking number (IBAN) and mention the international identification code (BIC)"

See: http://www.arrl.org/news/stories/2007/03/21/100/?nc=1

I was under the impression that my contribution will give us another opportunity to have a new space transponder but what i was able to get
is a bit frustrating There will not have any VHF/UHF capabilities but (Qoute-1) "the intention is to build a wideband transponder, L-band
uplink, S-band downlink. Moreover, digital ATV is also thought of. Anyway, among many other aspects, equipment volume, weight, power
consumption and heat budget are to be discussed with ESA and EADS". When i donate to help funding the project i was under the impression my
money will at least give another easy available amateur transponder but it seems we will ended up with an nearly exclusive ARISS
transponder as the actual cross band repeater and the supposed always activated SSTV system are never activated.

Sorry for the donators but you will not be able to use your U/V system on the columbus amateur radio station. What it is even more curious

is we are literally flooded with ARISS contact news and pretty soon with ARISSAT as the ARISS actual goals seems to be directed towards the
suit-sat II replacement. But what about this remaining columbus L/S transponder? did anyone got any news about the activation of the
radio/transponder? what i was able to get is dated back in 2007. The funding never reach the intended target money wise nor project wise
too. I just hope someone in ARISS or in the AMSAT'S will be able to come up with some fresh news? My greatest fear is this NORAIS will
replace the amateur radio project and they will vever use the actual L/S amateur patch antenna! I just hope someone will tell me that i'm
wrong here. BUT if you read below an excerpt from the ARISS June 2009 it's not helping me dissipating my fears (Quote-2)

"VHF-UHF antennas
Mark Severance N5XWF gave an AIS presentation on the co-usage by ESA and ARISS of VHF antennas for AIS (Automatic Identification System),
the tracking system for ships. STS-129 should be the shuttle mission associated with the space walk that will take place for the
attachment of the antennas we will co-use. NASA will be responsible for cost of the spacewalk. ESA will be responsible for the cost of the
installation, for the cost of the clamp to install the antennas, and the cost for the integration of the clamp."

"Onboard equipment
At this annual meeting, we will discuss which radios to install in the Columbus module. The VHF Ericsson radio is on board in the Russian
segment. The UHF one, that has never been used, is in the JEM. We have one of the Kenwood D-700s, also.
We will get a great deal of help from NASA and ESA for the work on the safety certification and the cost of this, the cost for upmass, and
the expense for an operating location in the Columbus module."

Just for the record STS-129 launch is planned for November 12 2009 and we are on the 14 of September!!!

What it is the most disturbing is this section of the May 19 ARISS tele conference meeting (Quote-3) "Low upmass plans are more highly
favored, so re-use of existing on-orbit hardware will be a more favored approach. Finally, there will be technical discussions on the AIS
and ARISS antennas and their installation on the outside of the Columbus module. The results of these discussions would be briefed to the
ARISS-I team during the joint ARWG/ARISS-I meeting on Wednesday morning. "

Not a single word on the L/S system or is the money donated will be use to fund a joint venture with a non amateur radio system?

On the July teleconference we can read (quote-4) "At the meeting the most important topic was how we work with the space agencies education
office and installation of equipment on Columbus," All discussion where conducted behind close door?

I just hope someone in the ARISS organization will be able to get my questioning and that he can give a long overdue update on the Columbus
amateur radio station project

On this 2008 presentation they are telling there is NOW a possibility to have a VHF/UHF whip?
http://www.amsat.org/amsat/ariss/Meetings/2008_Moscow/Presentations/17_moscow2008Columbus_Project.pdf

And digital ATV to improve the future ARISS session but where the equipment will be available to decoded amateur DATV signal when doppler
correction will also be mandatory on this type of equipment? It is widely out of reach for an amateur stand point and we are heading
towards a near commercial type of system more than an amateur one.

We are facing a lot of outdated informations and very few fresh updated ones. A suggestion could be adding some fresh project news to the
regular ARISS contact news list will help us to sort out a bit the mess.

Yahoo group: eu-amsat
Date: 2009-09-15 21:47:05 UTC
From: g0wxj
Topic: 2774 Message: 2774

Evening all,
Its been a while since i dusted off the kit and I have a problem with satpc32. For some reason when i select VO-52 there are no frequencies displayed and so no control. I did attempt to use HRD but gave up when poor G4UNX couldn't keep up with my frequency shifting about.

Anyone have any ideas? or perhaps a kind person could send me the doppler.sqx file which looks fine, but you never know.

73

This is the doppler file you need
VO-52,145900,435250.3,USB,LSB,REV,0,0
or
HAMSAT(VO-52),145900,435250.3,USB,LSB,REV,0,0

I have both then it doesn't matter where you get your kepps from.
Cheers Jon G7TZZ

This was posted on the AMSAT-SA site a couple of hours ago:

A few minutes before today's
launch (16 September) it was put on hold for 24 hours. A technical
problem in the fuel loading system was the cause of scrubbing the
launch. A special filter failed and will have to be replaced. It is
expected that the launch will be scheduled for 17 September at 18:55 CAT
(16:55). The final launch can only be confirmed by early afternoon
on 17 September.

Group,
For those interested ... this is a Soyuz-2-1b (see pic). The observant will notice the resemblance to the R-7 - (which launched Sputnik on October the 4th, 1957) - The Fregat being the workhorse of the Russian Space program.

This Roscosmos yo-yo gave birth to the Russian adage ... "If it's not broken don't repair it". - (Eng: "Don't change a winning team").

2782. Meteor launch delayed, again.

Yahoo group: eu-amsat
Date: 2009-09-17 08:30:49 UTC
From: allan_gm1sxx
Topic: 2782 Message: 2782

Hi group.

The launch of the Meteor weathersat along with Sumbandila and others was scrubbed again, this time due technical reasons.
One source reports a problem with a filter, while another African source reports the bird as in orbit :-)

It's likely that another attempt will be made at launching today.
Since the primary payload is intended to be in a sun-synchronous orbit, it's a case of "same time, same channel".

Does anyone in the groups know the planned launch inclination? Traditionally, METEOR craft were launched from Plesetsk into sun-synchronous 81 degree orbits at around 540Kms to provide good all-round coverage of the Earth, but this one ie being launched from Baikonur for which 65 degrees is close to optimal. 81 degrees better suits a WXSAT operation because it allows more of the planet to be covered. It is of course, possible to make a plane-change 'dog-leg' manoeuver using the upper stage, to alter the inclination, but this is very expensive in terms of fuel and with such a large payload on board seems unlikely to me. I look forward to the eventual launch.
It will answer a few questions for me.

73 Al.

From: allan_gm1sxx
Topic: 2783 Message: 2783

A few minutes before today's launch (16 September) it was put on hold for 24 hours. A technical problem in the fuel loading system was the cause of scrubbing the launch. A special filter failed and will have to be replaced. It is expected that the launch will be scheduled for 17 September at 18:55 CAT (16:55). The final launch can only be confirmed by early afternoon on 17 th.

Hello group

I have trouble with the above given time. What is CAT ? Central Asian Time ? Kazakhstan has 2 timezones, 5 and 6 hours in top of UTC. But easier is the South African time given here:
http://blogs.sun.ac.za/news/2009/09/16/launch-for-stellenbosch-satellite-delayed-again/

"For the satellite to be launched into a specific orbit around earth, the launch can only take place at a certain time, when it is late evening (around 18:00 South African time) at the launch site in Baikunor, Kazakhstan in Central Asia."

If the launch is at 17:55 Johannesburg time (around 18:00 South African time and also MESZ), then the launch will hopefully be at 15:55 UTC, 1 hour earlier as given above. I made my investigations on http://www.timezoneconverter.com.

Hi Thomas, you are right about the fact that the launch is rather time critical. It also needs to reach a specific altutude in order to be sun-synchronous. Here's what the big boys at the federation say.

"Start: 18:00 September 17, 2009 (Moscow time, MSKS). End: 21:00 September 17, 2009 (Moscow time, MSKS).
Launch time: 19:55:07 September 17, 2009 (Moscow time, MSKS)."

So 19:55:07 Moscow time is the nominal time for launch.

I hope that helps.

Yes, 19:55:07 Moscow time is also 15:55:07 UTC. The time given in brackets before (16:55) is definitely wrong. Anyway, keep the fingers crossed for a successful launch.

Hi group.

Confusion? There is no confusion, so long as you consult the right people. The Federal Space Agency is a good place to start. See the Russian Federation websitesite TsENKI. TsENKI is at
http://www.tv-tsenki.com/index.php

The Roscosmos site (currently a day out of date) is at http://www.roscosmos.ru The other sites just seem to just be 'following' and are usually out or date or just plain inaccurate. One source even claimed the bird was launched yesterday (now changed I notice). Somehow I don't believe that either AMSAT or the Southgate ARC will be the first to know when the launch actually occurs.

14:55 GMT, see
http://www.southgatearc.org/news/september2009/sumbandilasat_launch_postponed.htm

Apparently it's a multi drop launch, Meteorsat first then as the launcher heads back to the atmosphere SumbandilaSat is released.

Years ago some folks thinking an universal time standard based on meridian 0 will be the best way to dissipate any world time confusion. It
was GMT at first then UTC some still called it Zulu time.

But many are still reporting MSKS CAT just to make things a bit more complicated even NASA on NASA TV channel is using at times EDT CDT and
PDT. Why they don't use UTC is still a mystery just just have to know you time difference with UTC and no more confusion and no more
headaches with summer/winter time and who's is working with it or not and at what time they change it.

Don't get too excited Marco. The amateur payload is secondary to the mission and my understanding is that it will not be activated immediately after launch. As to the beacon frequency, I've drawn a blank on that. The usual sources seem to be very vague about the amateur payload.
Sumbandila is not a conventional amateur bird. Instead it's an amateur satellite package aboard a commercial LEO Earth Observation craft built by Sunspace.

See ...
http://space.skyrocket.de/index_frame.htm?http://space.skyrocket.de/doc_sdat/sumbandila.htm
and
http://www.sunspace.co.za/programmes/ZA002.htm

A little bit of searching turned up this item from G4TUT.
Nothing on the beacon freq. though.

73 Al.
==========

>The Amateur Radio payload on SumbandilaSat comprises a V/U FM voice transponder with an uplink in the 2 metre band on 145.880 MHz and a downlink in the 70cm band at 435.350 MHz. It has a parrot repeater (voice digipeater) and a voice beacon.

>The Amateur Radio Payload will be operating in conjunction with the University of Stellenbosch Software Defined Receiver project as it will share the VHF receiver and UHF transmitter used by the SDR project.

>The satellite also carries a Very Low Frequency (VLF) radio experiment from the University of KwaZulu-Natal.

>Pieter ZS1PK/M0PAK says that the Amateur payload will probably not be switched on straight after launch. Commissioning is most likely to be performed from Stellenbosch South Africa only. So telemetry will only be heard whilst in contact with the groundstation and NOT on the amateur frequencies. There are a number of hams involved in the project so rest assured the amateur payload will be supported as soon as practical and safe.

Hello Marco and group

The frequencies are 145.880 MHz FM Uplink and 435.350 MHz FM Downlink.
The transponder is in DSP-technique and has 3 functions. FM Phonie
Repeater (like AO-27/SO-50/AO-51), Parrot Repeater and Digitalker.
The functions are CTCSS controlled on uplink.

Its described on their new homepage
http://www.amsatsa.org.za/SumbandilaSat.htm.
But the QRG of the "voice beacon" is wrong I think. It makes no sense to
transmit on another QRG. And 435.300 is coordinatet for and used by AO-51.
But we will see...

2800. Cushcraft A432-20T

Yahoo group: eu-amsat
Date: 2009-09-18 16:21:39 UTC
From: Luc Leblanc
Topic: 2800 Message: 2800

I just get a Cushcraft A432-20T at a recent Hamfest. As per the theory if the longest matching line is connected to the horizontal element
and the shortest to the vertical one i should have a RHCP but if i reverse the connections should i have LHCP? If i rotate the antenna by
90 degress how i can determine the horizontal versus the vertical elements? The only one reference i have is the U bolt attachment to
determine the horizontal elements or one driven elements is the closest to the reflector (further away behind the other driven element).

There is no marking on the beam only the driven elements caps are both marked with 1/2 SC? This model was not made with a switching device
and as i don'r have the specs sheet i'm in the blind to configure it to RHCP as it seems it is the actual UHF standard on the circular
LEO's fleet?

Thank's for your help

2801. A432-20T AXIAL RADIATION???

Yahoo group: eu-amsat
Date: 2009-09-19 08:38:21 UTC
From: Luc Leblanc
Topic: 2801 Message: 2801

I want to thank's Glenn AA5PK who provide me with the antenna manual. When reading it i discover something new "axial radiation" the
matching line can be made for LHCP and RHCP using RG-59 and RG-58 combination for delay/matching lines and two RG-59 for delay/matching
lines to produce this "axial radiation"? Is this gives both horizontal and vertical polarization at the same time? If it's the case it's
could be a way to counteract the polarization change eg; having to manually rotate the antenna. Just note they don't called it
"polarization" but "axial radiation"

Google give me a lot of return but all related to helical, helix antenna as this one:

http://books.google.ca/books?id=J4YcUA-rxJoC&pg=PA128&lpg=PA128&dq=antenna+axial+radiation
&source=bl&ots=JtTANyGfs-
&sig=KS6GlYQASby8PGijm8DRZ5TefDQ&hl=en&ei=kpW0Stu7FdPelAeo96zvDg&sa=X&oi=book_result&ct=re
sult&resnum=10#v=onepage&q=antenna%20axial%20radia
tion&f=false

That's what i like in the hamfest you always stumble on odd things this antenna matching harness is made for axial radiation just hope they
are not harmful like the gamma rays on humans :)

I cut and pasted the following text from TWITTER.

>After numerous delays South Africa has successfully
>launched its low-orbiting satellite SumbandilaSat into
>space ...

This is PRECISELY how misinformation is passed on, leading to
misunderstandings.

South Africa has *NOT* successfully launched it's low-orbiting
satellite into space. It has had it launched into space for them
... by the Russians. There is a very large difference in fact and
implication.

Could I just correct this one. The launcher doesn't 'head back to the atmosphere' releasing a satellite.. as was suggested.

Once the Fregat upper stage (not launcher) carrying the satellites had reached orbit, Meteor-2, being on top of the stack would have been released first, possibly followed by an avoidance manoeuver, to avoid colliding with the main payload. It's likely that the secondary payloads would then have be ejected in a timed sequence.

The 'heading back to the atmosphere' part is a complete nonsense.
The Fregat upper stage is still in orbit to which I'm sure the satellite attachment platform is still attached.

(this from Celestrak)
FREGAT/IRIS
1 35870U 09049F 09262.10809061 .00002269 00000-0 10000-3 0 49
2 35870 97.3739 312.1506 0009837 292.4419 67.5624 15.22796788 217

This is the discarded Fregat (Frigate) upper stage from which the meteor weathersat and microsats were ejected.

Clearing up space junk.
Some upper stages are caused to re-enter by deliberatly slowing them using surplus fuel or oxidiser. I'm not sure if the Russians do this with Fregat and Briz, but for the moment at least, its still up there with the other objects.

I hope this helps to clear up how multiple satellite launches are generally handled once they reach orbit.

IMHO the only one way to be sure ITAR will really work is to have those who's in charge to enforced it to sit on every piece of materials
who does not want to be put in any foreign apparatus. The only risk is to have some of theses pieces poke themselves time to time in the
"derriere" as someone suggested earlier.

Dear Jose and group

To prevent a misunderstoodment: Only operators from the command team at EPFL, who are also HAMs, can command the satellite. The call of SwissCube-1 is HB9EG/1 and HB9EG is the call of the commandstation.

We HAMs worldwide can participate via http://swisscube-live.ch/.
The downlink is on 437.505 MHz. The modulation is FSK with +- 2 kHz.
Data is sent in 1200 bps Packet Radio with 500 Hz hub. You have to reveive the FSK-signal in SSB (not FM AFSK) to decode, like Polysat CP6.
There is also a CW morse beacon with 14 bps.

I think read somewhere that the planned future Moon mission has one prerequisite EG: enough water on the moon soil to sustained long
duration mission?

From JPL

Water on the moon

"To put that into perspective, if you harvested one ton of the top layer of the moon's surface, you could get as much as 32 ounces of
water."

Just enough for an expresso coffee!

From this site what we can read does not seems to be very positive for a long trouble free operation? Could be some hardware are not
radiation resistant or enough to sustain long nominal operation.

One factor will remain radiation will not vanished and the effect on material will only added up.

"There seems to be a high incidence of Single Event Effects (SEE) due to radiation, especially on the On-Board Computer (OBC). We have
however designed all the electronics with latch-up protection, so none of the SEE occurrences to date have caused any permanent damage.
Sometimes an SEE causes the OBC to reset and we have recently noticed that an auto restart of the processor then does not fully complete.
With the WOD now available to us it seems that the lengthening of a timing constraint in software will be able to alleviate this problem.
Note that we could not test for SEE on the ground so were not able to observe this timing effect prior to launch."

I just hope they will be able to go around theses issues

I video record the launch where we can see Jeff William playing with the gravity gauge hanging lion floating just in the front of the
camera lens the tool is called an arm extender and if you watch it closely he's attached near the seat with a string tether.

You can watch the launch replay at :

http://www.nasa.gov/multimedia/nasatv/on_demand_video.html?param=http://anon.nasa-global.edgesuite.net/anon.nasa-global/ccvideos/tma16launch.asx&_id=207669&_title=Expedition%2021%20Crew%20Launches&_tnimage=390191main_tma16launch_100.jpg

For the Space flame thrower "Billionnaire" clown i don't know if he will be able to use the ham station as he don't have any valid call
sign here?

Now the Nat enquirer sextion...

Hi

To know where to guide our actions it is often useful to remind the past...Here is what we all seen on AMSAT-BB months ago:

Just look at the chronology "time lapse"

On 30 Oct 2005 at 18:27, Rick Hambly (W2GPS) wrote:

> Luc,
>
> Gould took this action as an administrative measure in the best interests of

He was living in St-Bruno about 45 minutes drive from here.

Now with the actual thread about "Saving energy" and probably next the Kyoto protocole it is probably OT but it passes through the
censorship? One thing remain Chicago will not have the next Olympic games and congratulations to Brazil and president Lula! The message is
crystal clear there is no more room on earth to have freedom of speech restricted or deny to anyone (Just a bit of the whole context...) ,
even more in an amateur radio association called AMSAT-NA shame on you America...

I always want to know who is my torturer could be it's "Martha, She Wolf of the SS"?

I just start to understand why the middle age tortured always wear a hood!

I don't know what it take's to makes them understand the fine prints but they already start to go in the same set of minding again, Some
anthropologist start to compare the demise of the Roman and Greek empire with the past and actual American context.

Here i used a 5kw gas generator that i can back feed through a 30 amps panel breaker (Main switch out of the grid" and i have a 1kw
portable for a fast and priimary emergency use.

In winter land we often got snow storm with more than 6 inches and a a lot of regular one with half an inch. Solar panel are fine in exotic
most of the time sunny area but a disaster in winter land. This solar energy is IMHO often more an ego booster than anything else..I'm
greener and more wise than you and more skilful.

It is our former (now old) flower power pot smokers who recycle themselves in the new energy freedom fashion. It is not the peace and love
moto but solar power and war to feed the military industry.

Just stop the wars and you will gain a lot of fuel and a lot of gas price reductions. But what about the profits...just see the last
Micheal Moore film.

Cross posted due to AMSAT-NA an American open censorship supporting group and a non respect to the freedom of speech.

You still send your money to support this organization?

2815. OFF grid solar system

Yahoo group: eu-amsat
Date: 2009-10-04 12:18:28 UTC
From: allan_gm1sxx
Topic: 2813 Message: 2815

Hi group,

I'd gently remind EU-AMSAT group members that we set up this groups in order that alternative (including non AMSAT BOD Approved) ideas could be discussed without the vitriol that so frequently blights the AMSAT-BB. I suspect thats why this group is quite popular.

I for one *do* use solar power to run my station and because of that, I do think it has relevance for at least some radio-amateurs, especially those with unreliable grid connections or those who simply want to be grid-independent.

I use an 80W panel to charge my deep-cycle batteries that provide 13.8V power to the shack. So yes, solar power has relevance for me. And yes, it has given me light and radios when the grid supply failed, on more than one occasion.

As to AMSAT politics, so long as whats posted is not abusive to individuals, I don't think we should have major issues with it as a group.

If the truth be told, IMHO the whole amateur satellite* scene has far bigger issues.

It is in the doldrums, due in part to the burgeoning popularity of 'other' small (dare I say pico) satellites competing for launch space and amateur frequencies. Those free or cut-price launches we enjoyed in the past are a dim and distant distant memory.

Perhaps this might be a better issue to discuss, along with practical ways to get around the issue. If we don't find alternatives, the future will be grim indeed for AMSAT.

My personal definition of 'Amateur satellite' is birds with amateur radio transponders on board. And lest I get flamed over the earliest AMSAT birds being beacon-only, no I don't believe the earliest amateur built birds were true amateur radio satellites. They were 'Amateur radio space based beacons'. They helped prove the viability of transponder based satellites, structures, power, command and control and suchlike. More importantly, they proved that radio amateurs were up to the job.

YMMV, but, just like solar power and a little politics, lets not fight over it :-) If you DO feel very strongly about something, contact the person involved, and not this group, and do remember that English is not the first language of a fair number of group members.

Luc, I disbelieve, that your mails are censored on the "-BB". I think,
you have technical problems when your mail not appears. I saw mails
from you also with wrong dates, a few weeks back from the actual date.

When you mean, that your mail is censored and you make a copy to this
group, thats annoying. Why ? You rice a topic out from a thread and
nobody knows the whole content. This is senseless.

If you mean, a thread on -BB is also interesting for our group, then
you can copy the whole thread and we can discuss about it. Also about
powergenerators.

Sorry about my complains. But I read too much from your "censored" mails
now.

73 and have a nice Sunday

2820. Euro-Soyuz delays

Yahoo group: eu-amsat
Date: 2009-10-04 15:19:19 UTC
From: allan_gm1sxx
Topic: 2820 Message: 2820

Hi group.

As one who has been wondering what has been holding up Soyuz launches from Kourou, here is the answer. The Mobile Service Structure being built by the Russians for Arianespace is not yet ready. It's being built in Russia before being disassembled and shipped to Kourou where it will be reassembled. The Russians themselves don't need or use these structures, so maybe it has something to do with the prevailing hot & humid conditions at Kourou. It will allow payload integration to take place on the pad, rather than in the horizontal assembly building.

Here's a short animation of how the structure will work in practice.

http://vision.rambler.ru/users/22sos/1/1/

2821. Discussion.

Yahoo group: eu-amsat
Date: 2009-10-04 18:04:57 UTC
From: John Hackett
Topic: 2821 Message: 2821

Thomas and Luc,
May I respectfully suggest that you conduct your difference of opinion
off list and as GM1SXX has already suggested - if you reach a conclusion that is agreeable to both, please add that to the reflector in a brief mail.

BOTH !!! parties have points that are valid and are welcome to air their views but as has already been mentioned ... no 'personal' criticism please ... that should be directed to the peoploe concerned off list - *NOT* to the EU-Amsat reflector.

The group was never meant to be a generaql bulletin board (there are enough of those) but was !!! envisaged as a place to share a common interest of amateur satellites - be it the birds themselves, peripheral things like aerials, rigs, power and yes, even opinions ... providing they are not abusive.

I sincerely hope common sense prevails. Nobody wants a censored group.

This group *WILL* be disbanded before that happens.

Thank you.

73 John. EU-Amsat group moderator.

2822. Cheap antenna tracking?

Yahoo group: eu-amsat
Date: 2009-10-06 18:48:40 UTC
From: g3wie
Topic: 2822 Message: 2822

Hi All

I'm slowly building up kit for the satellites - AO-7 and AO-51 L/U being my targets. Antenna rotators are the biggest problem I have - I can't afford the az-el rotator pair, plus I don't have the huge mast to support it all. So I'm looking for other ways that will go on my modest mast which is fixed to the slope of my roof with an old rotator at the bottom. While looking on a satellite tv site for linear actuators, I saw a Cryptik H-H Mount, there's a good picture here

http://www.marconidigital.comproduct_info.php?products_id=1284

It seemed to me that I might modify it (lots!) to use an actuator to set the angle to match the orbit instead of the fixed adjustment shown, then the single motor would track the satellite across the sky. But I'd need to put it on a pole turned by a rotator, so is there any advantage to this idea - the alternative is to fix it so it's a plain elevation rotator.

ideas welcome

Chris g3wie

Hi Chris

> I'm slowly building up kit for the satellites - AO-7 and AO-51 L/U being my targets.

For Mode L/U you need an AZ + EL rotor. I use an IC-1271E with 15 W, 10
m of thick
coax into a RHCP helix-feed and 1.2 m dish indoor. But sometimes I have
too less power.

My suggestion is to begin with AO-7. Its easier to track this satellite
than AO-51 in
LEO.

From: allan_gm1sxx
Topic: 2822 Message: 2824

Hi Chris,

Unfortunately, if you take a look at the actual data from a tracking program for any of the amateur birds, they don't behave like geosynchronous ones and so cannot be tracked by traversing a sinple fixed arc.

You have two main options really..
1) Full AZ-EL tracking (fiddly and expensive, especially for beginners)
or
2) Fixed elevation tracking.

If you look at the time amateur satellites spend at various elevations, it becomes immediately obvious that they spend most of thir time at low elevetions. With that in mind, if you are using modest antenna beams, just set them to 30 degrees elevation and track in azimuth only.
This works because a modest antenna array has a sizeable vertical beamwidth, so you can cover a lot of sky with azimuth only rotation.

Low elevations lead to frequent signal polarisation changes (caused by Faraday rotation and scintillation) for which there is no single 'best' antenna solution. Some folks use CP aerials, many use linear while others use switchable polarisation. It's your call.

I hope that helps you a bit. A simple cheap TV type rotator will do the above, so long as you don't mind adjusting it during passes :-)

2825. Re: Cheap antenna tracking?

Yahoo group: eu-amsat
Date: 2009-10-07 08:45:32 UTC
From: g3wie
Topic: 2822 Message: 2825

Thanks both for your replies,

Thomas - I plan to start with AO-7 as you suggest; I have V/S gear from AO-40 when I didn't quite get the gear working before the satellite went silent :-(. For the L uplink I was thinking of puting the PA up the mast and feeding it with RG58 (really!) as it's easier to make up the loss at lower power. But L is for the future.

Alan - thanks for your orbital advice. I had feared it wasn't going to be that easy or someone else would have done it!

A bit more about the collection of bits and pieces available....

I've put a picture showing the antenna mounting in the files area. The shack is the room beneath where the light is showing. The short mast hinges down and I could reach the 10GHz rig (now taken down) from the roof window to the left without climbing out on to the roof; but a 2m antenna has to go through the window in pieces! I'd like to keep the antennas to about 1.5metres long to keep the visual impact down (they might grow later). Taking your fixed elevation advice, I was thinking of crossed yagis for 2m (can I get away with 4 ele?) and 70cm (with 8 ele I can hear FO-29 and AO-51 pointing through the window). I've used the WA5VJB design with success before. Any advice on the best way to do the polarisation phasing/switching? I have the ARRL Satellite Handbook which gives several options, is any particular method better (easier to set up)? I've collected several 951 coax relays so I plan to do the switching in a box up the mast

I have an old AR40 rotator from my 70MHz days in the 70s and 80s. It is controllable from a PC using the EA4TX interface, but I don't think that will talk to any of the tracking programmes. I can control my two rigs (an Elecraft K2 and a FT-747) from a computer so I could probably drive the rotator by hand to start with

I've tested 70cm transverter/50W PA which all works (I gather I won't need that much power which is nice for a QRP operator!), and I can re-arrange the 144MHz transverter that used to drive the 10GHz rig. I have a preamp for 144 which I could put at the masthead, is that really necessary with 10 metres of RG213?

Sorry for the long post but I wanted to get some opinions before I start putting all this together. Even though access to the antenna is not too hard, there a lot of stairs to climb....

Hello Chris

SatPC32 controls your EA4TX interface. Look at
http://www.dk1tb.de/indexeng.htm .
So you can also track AO-51 and the other LEOs.

Mastheaded preamps are allways a good solution. You have to be careful
with the cables from the preamp to the antenna while they are swinging
around the rotor.

Really Al ? I control the Doppler via RS-232, transistor and "mic-click" without any problems. In FM it "clicks" in 1 kHz steps upward. In my IC-1271E I have no CAT installed. There was no need in the AO-10-days.

Thomas,
Would you like to describe your doppler tracking/tuning system in more detail please - preferably with a diagram and the software you use use.

I'm sure it would lead to more people trying semi-auto doppler since the main thing that stops a *LOT* of people is the cost of automatic-doppler tuning rigs.

I used Itune and mic-pushbutton rigs for many years but unfortunjately, Microsoft in their infinate wisdom changed the way the parallel port is polled in WIN XP - so we can't use Itune anymore.

I was under the impression that ITUNE was the only way to control old fashioned mic push-button rigs these days.

I Look forward to hearing more about your system Thomas - as I'm sure others are.

Hello John

My solution is like Itune via serial port. But ... a great BUT ...
I'm a "hard die" OS/2 user. What the heck is OS/2 ? :-) Look at
www.ecomstation.com. I wrote my own tracking software in CA Realizer
BASIC for OS/2. So I could implement an "Itune routine".

This is the "hardware":

```
BC637
1N4148 1k8 |/---o---o TX PTT
o---|>|---o---/\/\/\---|\ |
|+ | | ==
RTS (7) === 1uF | /\ 1N4001
or | | |
DTR (4) --- ------ GND
```

If the above sketch is garbled, copy and paste it into your text editor
with fixed spacing font.

If you have also an IC-1271 let it know.

Rgr! Thomas,
Thanks. All understood.

However, (unfortunately) I'm a computer illiterate! so I'm not capable of writing a program to do what ITUNE did with operating systems up to and including WIN 2K.

I've often been in touch with Tony (author of ITUNE) and after much testing we came to the conclusion that WIN XP will *NOT* operate push button rigs from a parallel port with ITUNE ... only serial ports to a CAT interface ... so that's a pity.

It was too much trouble to rewrite the whole software package just for 20 year old rigs.

Thank anyway Thomas ... I now understand how you do it.

I'll just stick to my manual tuning until somebody 'donates' an 847 ... he he he ...

I tracked manually my L-band uplink with ease i just get my initial frequency reference on a PCR-1000 receiver and i manually adjust my
uplink frequency just a bit above the corrected doppler and it works like a charm. The only one problem is the L-band session are not often
available as i want to try automatic doppler with my transverter IF correction factor :(

Hi Al

L-band is definitely for later, though I have the necessary bits to produce about 15 watts which I hope will be enough. Power is expensive, but gain is cheap with MMIC, so I would mount the PA on the mast, which is practical at that power level.

"Industry Canada has informed RAC that there is a slight potential for interference to amateur radio systems, typically in the form of a
minor audible clicking noise."

We are accustomed to it with WIFI on 2.4 24/7 year long What they can do with SO-50 AO-27 AO-51 and all the cubes? I can actually hear the
Canadian coast guard vessel/car GPS positioning system on the amateur UHF band in the top of the band. So far they managed to keep their
system in the top of the band. For this new system they will have to share the band with the coast guard or with the other band amateur
traffic.

I just hope they will used this system on the battlefields!

That's good to know Luc, thanks. I think you said you use a helical on L band - how long/how many turns?

Chris g3wie

Do you prefer the void of silence or the silence of the void?

MEDIA ADVISORY : M09-126

NASA Ames to Showcase Spectacular LCROSS Lunar Impacts

MOFFETT FIELD, Calif. - NASA´s Lunar CRater Observation and Sensing Satellite (LCROSS) mission will come to a dramatic conclusion at
approximately 4:30 a.m. PDT (7:30 a.m. EDT) on Friday, Oct 9, 2009, with the impact of the LCROSS Centaur upper stage rocket and four
minutes later, the impact of the LCROSS Shepherding Spacecraft into Cabeus crater near the moon´s south pole. To mark the event, NASA Ames
Research Center is hosting `LCROSS Impact Night.´ News media are invited to cover the three-part event that is open to the public and free
of charge.

Media definition:

In communication, media (singular medium) are the storage and transmission tools used to store and deliver information or data. It is often
referred to as synonymous with mass media or news media, but may refer to a single medium used to communicate any data for any purpose.

Just note " a single medium used to communicate any data for any purpose. "

Just not don't throw the baby out with the bath water.

That is the question....!

P.S. Intended for the so on "Purist" pun intended?
